

## ► Air Cooled Condensing Units

# VLC 504 to 1204

135 to 329 kW

### Technical Brochure

TM VLC-A.2GB

Date : July 2006

Supersedes : TM VLC-A.1GB/06.05

Airwell

# Technical Features

## General characteristics

The VLC air cooled condensing units have been designed to operate with **HFC 407C** refrigerant.

Based on a compact design using a V-shape condenser coils, the VLC units have a rigid structure conceived in such a way that their "footprint" is optimised.

They are complete with **two independent refrigerant circuits**, a tandem high efficiency and low vibration level Scroll compressors for each circuit and a ventilating unit comprising finned coils and quiet fans.

The VLC range, composed of **9 sizes**, is available in **4 versions** : **STD (Standard), LN (Low Noise), ELN (Extra Low Noise) and HE (High Efficiency)**.

**VLC STD** : These units are designed to be located outside on the roof of a building or at ground level.

They are equipped with fans located in high efficiency and low noise housing. Units are supplied without any fan speed controller, nor soundproof jacket on compressors.

The 9 sizes of the STD units are covering a nominal cooling capacity range from 135 to 329 kW.

**VLC LN** : These units have the same equipment as the STD units, except that they are equipped with low speed fans and soundproof jackets on all compressors.

The 9 sizes of the LN units are covering a nominal cooling capacity range from 128 to 315 kW.

**VLC ELN** : These units are equipped with more fans (on sizes 504 to 804) than the STD units.

They are complete with a stepless fan speed controller, very low speed fans, greater surface area condenser coils and soundproof boxes on all compressors.

The 9 sizes of the ELN units are covering a nominal cooling capacity range from 131 to 304 kW.

**VLC HE** : These units have the same equipment as the ELN units; except that the fans are operating at full speed and that the fan speed controller and compressors soundproof equipment are not supplied.

They are suitable for operation at high ambient temperatures (up to +49 °C).

The 7 sizes of the HE units are covering a nominal cooling capacity range from 145 to 281 kW (VLC 1104 HE and 1204 HE are not available).

## Reference standards

The following applies to all the sizes and versions belonging to the VLC units :

- ✓ Machine Directive EEC 98/37 (EN 292/1, EN 292/2)
- ✓ Low Voltage Directive EEC 73/23 (EN 60204-1, EN 60439-1)
- ✓ Electromagnetic Compatibility Directive EEC 89/336 as modified by Directive EEC 92/31 (EN 50081-1, EN 50082-2)
- ✓ Pressure Equipment Directive 97/23/CE

## Cabinet and structure

The unit cabinet and structure are made of heavy gauge galvanized steel coated with polyester powder based painting (RAL 9001). All parts of the structure are fastened totally with non-corrosive screws and bolts.

## Compressors

Each unit is equipped with four compressors arranged in two tandems to suit the two refrigerant circuits.

The compressors are of hermetic scroll type and fitted with an electronic control system ensuring :

- protection against high temperature and excessive load,
- correct direction of rotation for greater power only compressors of VLC 704, 804 & 904 and for all compressors of VLC 1004, 1104 & 1204.

All compressors have direct-on-line starting and are mounted on rubber vibration isolators in order to minimize noise and vibration transmission.

## Condenser coils

The condenser coils shall be seamless copper tubes, arranged in staggered rows, mechanically expanded into corrugated aluminum fins.

Design working pressure of the coils shall be 28 bar.

## Condenser coil fans

Fans are of a direct drive axial type. Each of them is fitted with a painted steel protective guard.

Fans are equipped with externally mounted nozzle profile housing which generates low sound levels.

## Fan controls

Each unit can be equipped with an optional stepless fan speed controller, operating on the basis of condensing pressure, to keep fan rpm under control in order to operate in cooling mode at a low ambient temperature (-18 °C).

This fan speed controller is supplied as standard on the ELN units.

## Refrigerant circuits

All the units are composed of two independent and separate refrigerant circuits.

Each refrigerant circuit is equipped with suction and liquid line shut-off valves to permit the connection of the unit to the external evaporator.

The functional diagram of each circuit is shown in the section "Refrigerant flow diagram".

## Power and control panel

All operating and safety controls as well as the motor starting equipment, necessary for full unit operation, are centrally located in a metal box having IP 54 weather protection.

# Technical Features (continued)

---

## Control and safety devices

---

Each VLC unit is fitted with the following devices :

### Safety :

- Power disconnect switch with an emergency stop function.
- Double HP switches, set to 28 bar : automatic reset and manual reset from the control panel.
- LP switches (one for each circuit), set to 1.7 bar : automatic reset and manual reset from the control panel.
- Safety valve on discharge piping , set to 30 bar.

### Control :

- HP transducers (one for each circuit).
- Ambient air temperature sensor.

## Controls

---

The VLC units are supplied with a microprocessor-based electronic control and management system ensuring the following functions :

- Management of the operation of compressors :
  - a) Power on/off
  - b) Anticycle management
  - c) Management of delays at start-up
  - d) Tandem unloading for high pressure ( $P_c > 26$  bar)
- Management of high and low pressure alarms.
- Management of the remote control :
  - e) Unit power on/off
  - f) Summary alarm signals
- Remote signalling of unit information, by dry contacts :
  - g) Voltage presence
  - h) Compressors in operation
  - i) Alarm, circuit 1
  - j) Alarm, circuit 2

The unit controller can also clearly show all control parameters of the machine on a liquid crystal display, such as :

- Display of the ambient air temperature.
- Display of the circuit 1 and circuit 2 discharge pressure.

- Display of the set point.
- Display of the various alarm and operation status :
  - k) Compressor start-up alarm (discharge pressure check)
  - l) Low / High pressure
  - m) Control of the compressor operating hours
  - n) Compressors in operation
  - o) Thermal protection of compressors
  - p) Thermal protection of fans
  - q) Faulty sensor

## Factory installed options

---

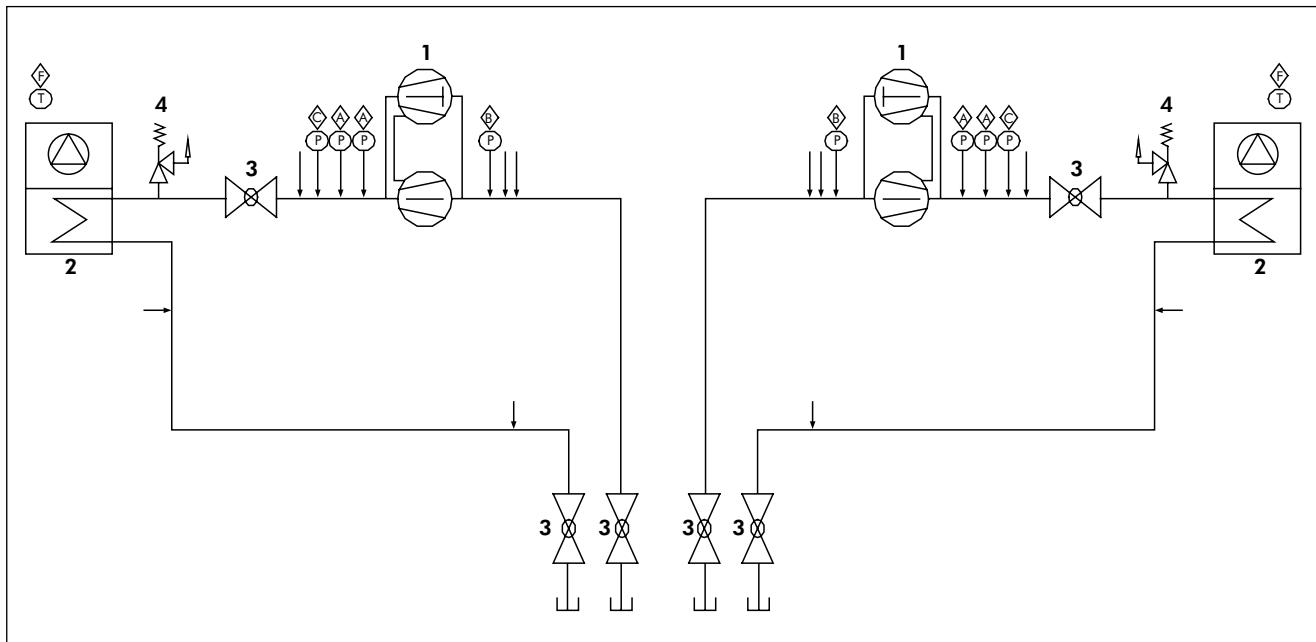

- ✓ Coils with blue fins covered with a coating easing the flowing of water.
- ✓ Coils with "Silverguard" (polyurethane) coated fins.
- ✓ Coils with copper fins.
- ✓ Stepless fan speed controller (STD, LN & HE versions).
- ✓ LP & HP manometers.
- ✓ Chiller grilles.
- ✓ Special inverter fans (SIF) for 120 Pa external static pressure.
- ✓ Compressor thermal protection.
- ✓ Compressor soft starter.
- ✓ Phase monitor.
- ✓ Power factor correction capacitors.

## Field-installed accessories

---

- ✓ Remote wire control (max. 50 m).
- ✓ Spring anti-vibration mounts.
- ✓ Clock/Memory board (STD & LN versions only).
- ✓ Wall remote terminal (max. 400 m).
- ✓ Chiller-Net control.
- ✓ ModBus protocol kit for BMS.
- ✓ Bacnet protocol kit for BMS.
- ✓ Airconet protocol kit for BMS.
