Note: Installation and maintenance are to be performed only by qualified personnel who are familiar with local codes and regulations, and experienced with this type of equipment.

Caution: Sharp edges and coil surfaces are a potential injury hazard. Avoid contact with them.

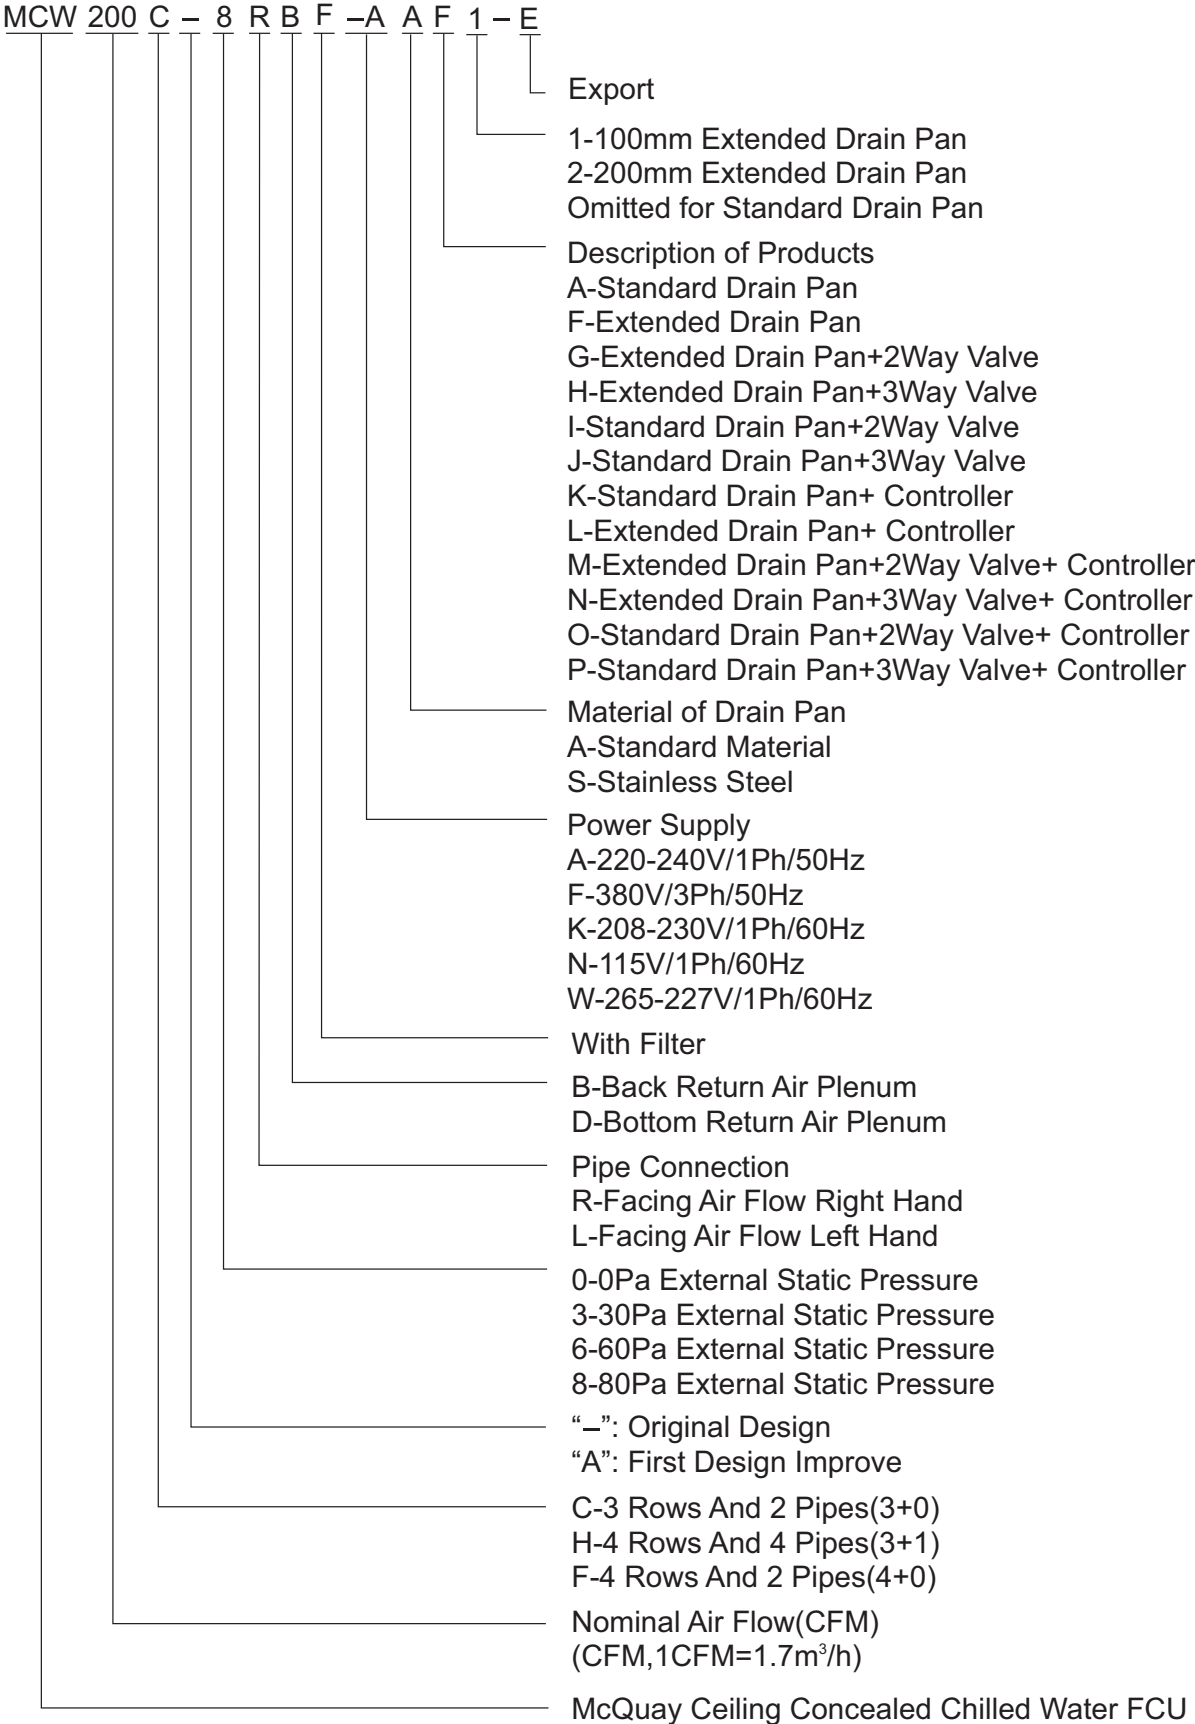

Warning: Moving machinery and electrical power hazard. May cause severe personal injury or death. Disconnect and lock off power before servicing equipment.

Nomenclature

РЕКОМЕНДАЦИИ ПО ПОДБОРУ ФЭН-КОЙЛОВ СЕРИИ MCW

Внимание!

Подбор фэн-койлов рекомендуется осуществлять по каталогам MCW-2007 (англ.яз.) или MCW_podbor (рус.яз.).

Программу McQuay 2.8.4 можно использовать только для подбора фэн-койлов серий MFU и MCW-EU (30 Па, с воздухозаборным коробом и фильтром).

Рабочие характеристики, приведенные в таблицах номиналов Specifications и таблицах для различных температурных условий эксплуатации Performance data, одинаковы для всех исполнений фэн-койлов серии MCW, за одним исключением, а именно: номинальной величины располагаемого напора, которая для модели MCW-EU (с фильтром и воздухозаборным коробом) составляет 30 Па, а для моделей MCW (без фильтра и воздухозаборного короба) и MCW-PF (с фильтром и воздухозаборным коробом) – 60 или 80 Па в зависимости от варианта подключения (можно изменить на месте монтажа). Для модели MCW-CD с электрокалорифером (в комплект также могут входить фильтр и воздухозаборный короб) располагаемый напор составляет 30 Па или 60/80 Па в зависимости от желания заказчика. Следует иметь в виду, что табличные данные приводятся для блоков базовой комплектации, что подразумевает оснащение только теплообменником и вентилятором с напором 30 Па для MCW-EU и MCW-CD и 60/80 Па для MCW, MCW-PF и MCW-CD.

Для исполнений с воздухозаборным коробом и фильтром (т.е. MCW-EU (30 Па), MCW-PF (60/80 Па) и MCW-CD (с электрокалорифером, 30 или 60/80Па)) фильтр и электрокалорифер считаются внешним элементом системы. Как следствие, падение давления на них необходимо учитывать в величине сопротивления воздухопроводов, присоединенных к блоку. Потери напора на коробе в расчет не принимаются.

Графики характеристик вентиляторов (стр. 24 – 25) также построены для блоков базовой комплектации, т.е. без коробов и фильтров (при высокой скорости вращения вентилятора).

Кривая 2 построена для модели с располагаемым напором 30 Па (MCW-EU, MCW-CD), кривая 3 – для модели с располагаемым напором 60 Па (MCW, MCW-PF, MCW-CD), кривая 4 – для модели с располагаемым напором 80 Па (MCW, MCW-PF, MCW-CD).

Процедура подбора (при условии равенства внешнего статического давления номинальному)

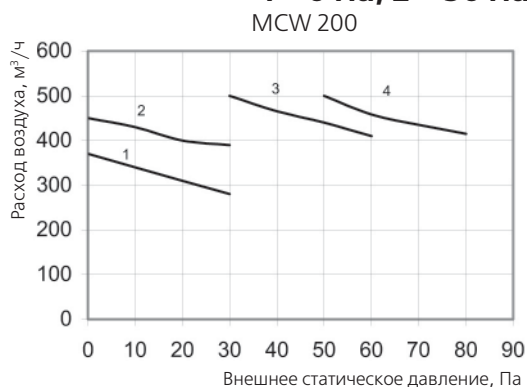

Подбор фэн-койлов серии MCW рекомендуется выполнять по каталогам MCW-2007 или MCW_podbor. Проще и точнее всего выполнять подбор для каждой модели исходя из номинального для нее значения располагаемого внешнего статического напора, т.е. 30 Па для MCW-EU и MCW-CD и 60 или 80 Па для MCW, MCW-PF и MCW-CD. При этом, как уже говорилось ранее, фильтр и электрокалорифер считаются внешним сопротивлением. Падение давления на электрокалорифере в зависимости от его мощности составляет 8 - 15 Па⁽¹⁾, процедура расчета падения давления на фильтре описана ниже.

Источники данных

В таблицах номиналов Specifications (стр. 7 – 9) для каждой модели указаны расход воздуха, хладо- (Cooling capacity) и теплопроизводительности (Heating capacity), перепады давления и расход воды при высокой скорости вращения вентилятора для стандартных условий (температура воздуха на входе 27 °С по сухому термометру и 19,5 °С по влажному термометру, температура воды на входе 7 °С и перепад температуры воды 5 °С), а также номинальном для каждой модели располагаемом напоре.

В таблицах Performance data (стр. 12 – 20) приведены данные по полной (Total cooling capacity) и явной (Sensible cooling capacity) хладопроизводительности при работе вентилятора на высокой скорости, при номинальном для каждой модели напоре (т.е. 30 Па для MCW-EU и MCW-CD, 60 или 80 Па для MCW, MCW-PF и MCW-CD),

1 – 0 Па, 2 – 30 Па, 3 – 60 Па, 4 – 80 Па

Мощность электрокалориферов, используемых в фэн-койлах MCW серии CD

Модель, параметры электропитания	Мощность электрокалорифера (кВт)												
	1	1,5	2	2,5	3	3,5	4	4,5	5	5,5	6	7	8

(1) Данные о падении давления на каждом электрокалорифере пока отсутствуют.

для различных температур воздуха на входе по сухому (DB) и влажному (WB) термометру в зависимости от температуры воды на входе и перепада температуры воды. Значения теплопроизводительности при работе вентилятора на высокой скорости приведены в таблицах Performance data (стр. 21 – 23). Для определения характеристик при работе вентилятора на средней и низкой скоростях необходимо использовать поправочные коэффициенты, приведенные под каждой таблицей Performance data (стр. 12 – 23).

Ниже приведены значения поправочных коэффициентов на высоту над уровнем моря и на содержание этиленгликоля в хладагенте (См. табл. 1).

Методика расчета падения давления на фильтре

Падение давления на фильтре, используемом в фэн-койлах серии MCW, определяется исходя из значений падения давления на фильтре площадью 0,35 м², полученных испытательным путем.

1. По данным, содержащимся в табл. 2, определяем фактическую площадь фильтра, используемого в фэн-койлах серии MCW.

Таблица 2

Модель	Площадь фильтра, м ²
MCW200	0,09
MCW300	0,13
MCW400	0,15
MCW600	0,19
MCW800	0,24
MCW1000	0,27
MCW1200	0,32

2. Выполняем перерасчет фактического* расхода воздуха блока $V_{\text{факт}}$ с целью получения значения, эквивалентного

расходу воздуха через фильтр площадью 0,35 м² (см. табл. 3).

$$V_{\text{эквив}} = \frac{V_{\text{факт}}}{S_{\text{факт}}} \cdot 0,35$$

$V_{\text{факт}}$ – факт. расход воздуха блока, м³/ч;

$V_{\text{эквив}}$ – расход воздуха, эквивалентный расходу через фильтр площадью 0,35 м², м³/ч;

$S_{\text{факт}}$ – площадь фильтра, используемого в фэн-койлах серии MCW, м² (см. п. 1).

3. Исходя из полученного эквивалентного расхода воздуха (см. п. 2) по табл. 3 определяем падение давления на фильтре, используемом в фэн-койлах серии MCW.

Таблица 3

Результаты контрольных замеров падения давления на фильтре площадью 0,35 м²

Эквивалентный расход воздуха, м ³ /ч	Падение давления на фильтре площадью 0,35 м ² , Па
300 (25% **)	1,0
500 (40% **)	2,0
800 (65% **)	3,9
1000 (80% **)	5,5
1200 (100% **)	7,4
1500 (125% **)	10,8
1800 (150% **)	14,7
2000 (165% **)	16,7
2200 (180% **)	19,6
2500 (200% **)	25,5
3000 (250% **)	32,3

* Фактический расход воздуха при высокой, низкой и средней скоростях, если считать внешнее статическое давление равным номинальному (30, 60 или 80 Па), можно взять из таблиц номиналов Specifications (стр. 7 – 9). Фактический расход воздуха при высокой скорости в случае отклонения внешнего статического давления от номинального определяется по графикам характеристик вентиляторов (стр. 24-25).

** От номинального расхода воздуха

Таблица 1

Поправочные коэффициенты, учитывающие высоту расположения агрегата над уровнем моря

Высота расположения установки над уровнем моря, м	0	300	600	900	1200	1500	1800
Барометрическое давление, мбар	1013	977	942	908	875	843	812
Поправочный коэффициент хладопроизводительности	1	0,993	0,986	0,979	0,973	0,967	0,960

Содержание этиленгликоля (в %) в хладагенте в зависимости от температуры и соответствующие поправочные коэффициенты

Весовое содержание этиленгликоля в хладагенте, %	10	20	30	40	50
Поправочный коэффициент хладопроизводительности	0,991	0,982	0,972	0,961	0,946
Поправочный коэффициент для расхода воды	1,013	1,040	1,074	1,121	1,178
Поправочный коэффициент для перепада давления воды	1,070	1,129	1,181	1,263	1,308

Примечание: Методика подбора при отклонении располагаемого напора от номинального предоставляется по запросу.

Features

Extra Low Noise Design

Enlarged fan wheels design allows lower fan RPM selection for the same external static pressure and airflow requirement. Thereby, noise level is significantly reduced.

Flexibility

Water connection side can be changed easily in the field by changing positions of fan-motor assembly or the supply air flange assembly. Fan-motor assembly is not cased allowing back return or bottom return installations.

High Efficiency Heat Exchanger

A boundary layer film of air adhering to the fin surface will insulate the fin surface and severely reduces the heat exchange efficiency. Mcquay slit fin design eliminates this boundary layer of air and creates continuous for best heat exchange efficiency.

Variable External Static Pressure

Four types of external static pressure are available for every unit:0PA, 30Pa,,60Pa,80Pa.

Compact Design

This series of fan coil units are designed to suit most ceiling concealed installations. Unit height is only 251mm across the entire model range. The feature also maximizes provisions for drain fall requirements. New design realizes all the filters removal both from the side and bottom(Option).

Auxiliary Electric Heater (Only For Type C)

The heating source of Mcquay fan coil unit is PTC (Positive Temperature Coefficient) heater.

1. Safety

A fuse (135°C,10A) is connected in each PTC main wiring circuit. A thermostat (50°C,10A) is connected in the control wiring circuit. If the fan of the units is not running, the thermostat or fuse will cut off the power of the unit. In additional, the surface of the PTC heater is without electric power. So the fan coil unit is safe enough.

2. Save Energy

Quick heating spread, strong heating capacity, steady performance and save energy are characters of PTC heater.

3. Easy To Install And Maintain

Needn't remove the air duct when maintain the electric components of the units. Please refer to the corresponding sections for installation and maintenance.

Wiring Diagrams (50/60Hz)

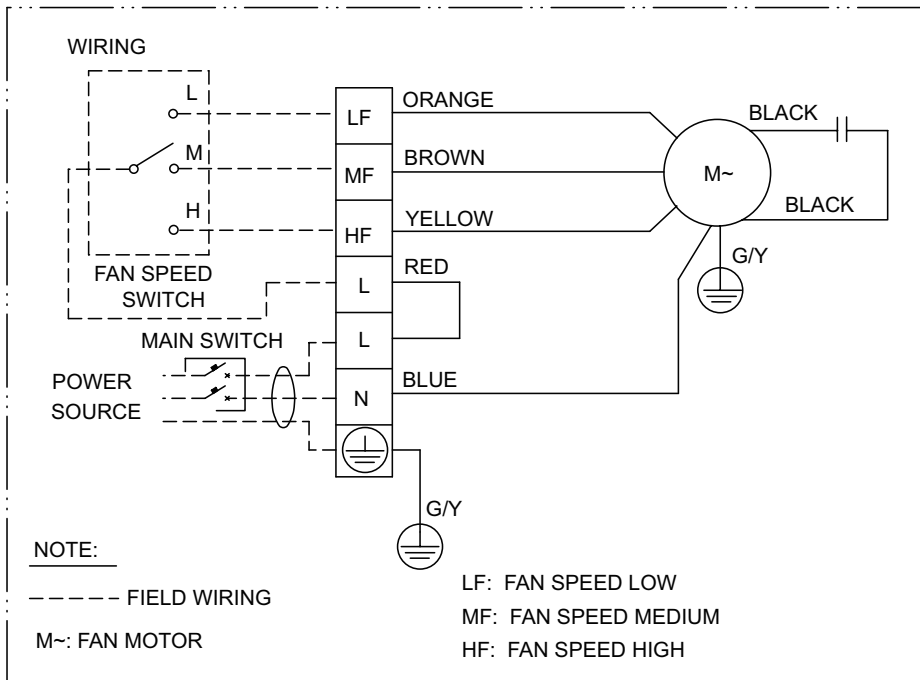

Wiring(C/H/F, 50/60Hz)

Electrical wiring connection must be done according to the wiring diagram on the unit.

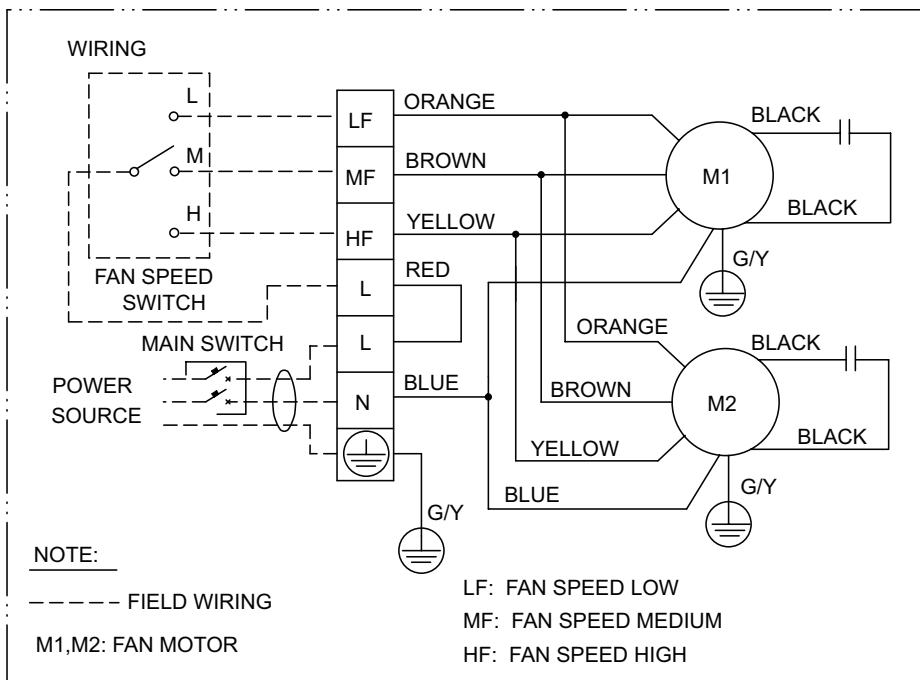

The unit must be GROUNDED to the earth system of the building.

All field wiring must be installed in accordance with the national wiring regulation and Fire Department regulation.

Installation

Receiving

All units leaving the McQuay plant have been inspected to ensure the shipment of high quality products and reasonable means are utilized to properly pack the fan coil units to protect them in transit.

Carefully inspect all shipments immediately upon delivery. When damage is visible, note this fact on the carrier's freight bill and request that the carrier sends a representative to inspect the damage. This may be done by telephone or in person, but should always be confirmed in writing.

The shipment should be unpacked in the presence of the agent so that the damage or loss can be determined. The carrier's agent will make an inspection report and a copy will be given to the consignee for forwarding to the carrier with a formal claim.

Location

Before installation, please check the following:

There must be enough space for unit installation and maintenance. Please refer to the unit's drawings and dimensions and fig.1 for the minimum distance between the unit and obstacle.

Please ensure enough space for piping connection and electrical wiring.

Please make sure that the hanging rods can support weight of the unit.

Installation

The unit is designed for concealed ceiling installation.

There are holes on the top of the unit for hanging. Please refer to Fig.1.Fig.2 and Fig.3.

Make sure that the top of the unit is level.

Insulation

- 1) Use proper insulation material only
- 2) Chilled water pipes and all parts on the pipes should be insulated
- 3) It is also necessary to insulated air ducted
- 4) Adhesive for insulation should work under range 0°F(-18°C) to 200°F(93.3°C).

Fig.1

Fig.2 WITH AND WITHOUT PLENUM FORM:

Fig.3 DETAIL A:

Air Duct Connection

Circulatory air pressure drop should be within External Static Pressure
Galvanized steel air ducts are suitable
Make sure there is no leak of air.
Air duct should be fireproof, refer to concerned country national and local regulations.

Pipe Connection

Using suitable fittings as water pipe connections. Refer to the specification
The water inlet is on the bottom while outlet on top.
The connection must be concealed with rubberized fabric to avoid leakage.
Drainpipe can be PVC or steel.
The suggested slope of the drainpipe is at least 1:50.

Wiring

- 1) Wiring connection must be done according to the wiring diagram on the unit.
- 2) The unit must be GROUNDED well.
- 3) An appropriate strain relief device must be used to attach the power wires to the terminal box.
- 4) A 7/8" knockout hole is designed on the terminal box for field installation of the strain relief device.
- 5) Field wiring must be complied with the national security regulations.

Guide Specifications

Unit Description

Factory-assembled, horizontal, blow-thru type, galvanized casing, ceiling ducted fan coil unit is complete with water coil, fans, motors, drain pan, filters and all required wiring, with full access to internal components.

Quality Assurance

Each coil is factory tested for leakage at 3.3MPa air pressure with coil submerged in water. Each unit and its moving components (fans and motors) are factory computer-tested and recorded after unit is complete and before it is packed.

Component Specifications

1. Casing:

Construction is of 0.8mm thickness galvanized steel, lined on the inside with 5mm PE thermal and acoustical insulation. Return air plenum is lined with 5mm PE foam and has a 30mm collar for return duct connection. Supply duct connection also has a 30mm long collar. Removable bottom panel is provided for access to the fan/motor assembly.

2. Coil:

Standard unit is equipped with a 3-row (C series), 4-row (F series) or 3+1 rows (H series) coil for installation in a 2-pipe (C and F series) or 4-pipe (H series) system. Coil has 3/8 inch seamless copper tubes, slit type fins hydrophilic aluminum bonded to the tubes by mechanical expansion. Each coil has a manual air vent and two Rc3/4 water pipe connections with a working pressure of 1.6MPa.

3. Fan:

Direct-driven centrifugal fan wheel has forward-curved blades which are statically and dynamically balanced. The fan housing and blades are constructed of high quality hot-galvanizing steel.

4. Motor:

Fan motor is 3-speed, 220V-240V, single-phase, 50Hz, permanent split-capacitor type with ball type bearing and build-in automatic reset thermal overload protection. The motor's insulation is class E.

5. Drain pan

The drain pan plate body is constructed of cold-rolled steel by way of integral cupping. Both its sides are sprayed with plastic coating. And its outer wall is lined with 7mm heat insulating PE foam and high quality adhesive by way of integral adhering and pressing. It extends under the full length and width of the coils and is pitched for positive drainage with features of high anti-corrosion, anti-condensation and high fire reluctance.

6. Filter

Filter is with washable type nylon media in 8mm thickness aluminum frame.

Products manufactured in an ISO certified facility. This document contains the most current product information as of this printing. For the most up-to-date product information, please go to www.mcquay.com.cn.
