

## ► Air Cooled Screw Chillers

# SLS 1202 to 4004

## With or without total heat recovery

262 to 916 kW

Technical Brochure

TM SLS407-A.3GB

Date : November 2006

Supersedes : TM SLS407-A.2GB/10.04

Airwell

# Technical Description

## General

The SLS air cooled screw chillers are equipped with low noise level axial fans and are suitable for exterior installation.

The models **SLS 1202 to 4202** can be equipped, as optional, with **total heat recovery system** (composed mainly of additional condensers, liquid receivers and 4-way valves) allowing to recover all the condensing heat for the production of domestic hot water.

The units are supplied with complete charge of oil and HFC 407C refrigerant.

The SLS units are factory tested in compliance with internal quality system specifications and procedures, and are ready for field installation.

The models SLS 1202 to 4202 consist of **2 independent refrigerant circuits** with one semi-hermetic twin screw compressor on each circuit. They are equipped with a dual independent circuit plate type heat exchanger on models SLS 1202 to 2602, and with a shell-and-tube type heat exchanger on models SLS 3002, 3402, 3802 and 4202.

The models SLS 3804 and 4004 have **4 independent refrigerant circuits** with one semi-hermetic twin screw compressor on each circuit, two dual independent circuit plate type heat exchangers and two independent electrical boards located on each end of the unit.

The SLS range is available in **4 versions**. Each version is composed of **15 sizes**.

**SLS BLN : Reduced Low Noise Standard Version** equipped with Delta connected fans. Each fan is located in an externally mounted nozzle profile housing generating low sound level. The compressors are housed in a protective box. The SLS BLN units are covering a nominal cooling capacity range from **262 to 916 kW**.

**SLS LN : Low Noise Version.** These units have the same condenser coils and fans as the BLN units. They are thus fitted with Delta connected fans (each fan is located in an externally mounted nozzle profile housing), with an acoustically insulated box mounted on each compressor and with a fan speed controller. The SLS LN units are covering a nominal cooling capacity range from **247 to 868 kW**.

**SLS ELN : Extra Low Noise Version** having more fans than the SLS LN version. These units are provided with Star connected low speed fans, greater surface area condenser coils, fan speed controller, acoustically insulated compressors box, and flexible pipes and mufflers mounted on compressor discharge lines. The SLS ELN units are covering a nominal cooling capacity range from **247 to 869 kW**.

**SLS HET : High Efficiency and High Temperature Version** consisting of same condenser coils and same number of fans as SLS ELN version. The fans are Delta connected and the compressors are housed in protective boxes. These units are provided without fan speed controller, nor flexible pipes and mufflers on discharge lines of compressors. The SLS HET units are suitable for operation at high ambient temperatures (up to +46 °C) and are covering a nominal cooling capacity range from **269 to 937 kW**.

## Reference standards

The following applies to all the sizes and versions belonging to the SLS units :

- ✓ Machine Directive : EEC 98/37 (EN 292/1, EN 292/2)
- ✓ Low Voltage Directive : EEC 73/23 (EN 60204-1, EN 60439-1)
- ✓ Electromagnetic Compatibility Directive : EEC 89/336 as modified by Directive EEC 92/31 (EN 50081-1, EN 50082-2)
- ✓ Pressure Equipment Directive : 97/23/CE

## Cabinet and structure

The unit cabinet and frame are of heavy gauge galvanized steel fastened with non-corrosive screws and bolts. Galvanized steel parts are painted with baked-on enamel coloured **white (RAL 9001)**.

The SLS units have a very compact structure, with optimized footprint, designed on 4, 6 and 8 meter long bases.

## Semi-hermetic screw compressors

The compressors installed in the SLS units are of semi-hermetic twin screw type integrating step type cooling capacity control system.

All compressors are fitted with an electronic control system ensuring the following functions :

- protection against high temperature and excessive load ;
- correct direction of rotation ;
- phase monitoring.

The main features of cooling capacity control of each compressor are stated below :

- compressor capacity reduction by means of solenoid valves ;
- capacity reduction steps relating to each compressor : 25% (at start-up and pump down), 50%, 75% and 100% ;
- 6 capacity steps are then provided on 2 refrigerant circuit units : 25%, 50%, 63%, 75%, 87% and 100% and 12 steps on 4 refrigerant circuit units.

Furthermore, the screw compressors are provided with control devices to make the SLS units more reliable :

- electric motor temperature sensor ;
- discharge temperature sensor ;
- liquid injection.

The liquid injection into the compressor is assured by the presence of an additional liquid line : the liquid injection allows the discharge temperature to be reduced; thus permits the unit to operate at higher ambient temperature.

The additional liquid line consists of a capillary located downstream a solenoid valve. This solenoid valve is controlled by a thermostat located at the compressor discharge line.

The compressors are supplied with a Part-Winding and/or Star-Delta starting system (refer to section "Compressor electrical data").

## Evaporators

Evaporators are of dual independent circuit brazed plate type and of shell-and-tube type (on models SLS 3002 to 4202) heat exchanger.

They are insulated with a 19 mm thick closed cell foam material and are fitted with an electric cable resistance on the external surface to prevent the unit from freezing at a low temperature (down to -18 °C), when the unit is off.

Inlet and outlet connecting manifolds can be supplied as optional extra on the units with two evaporators (SLS 3804 and 4004).

## Total heat recovery condensers (optional)

Plate type (sizes 1202 to 2002) or shell and tube type (sizes 2202 to 4202) condensers fitted on the gas discharge lines, in parallel with the standard cooling circuits.

Each unit is equipped with two heat recovery condensers, one on each circuit.

Thanks to the 4-way valves used in the heat recovery system, the mode switching from cooling only mode to heat recovery mode is totally synchronized.

With such system, there is no any refrigerant stagnation in the condenser coils where all the fans are off, because the compressors suck all the refrigerant from the coils. Thus, influence of wind or air temperature is avoided during heat recovery operation.

## Condenser coils

The condenser coils are consisting of seamless 1/2" copper tubes, arranged in staggered rows, mechanically expanded into corrugated aluminium fins.

The coil circuiting has been specially adopted to increase the performance of the refrigerant.

# Technical Description (continued)

## Condenser coil fans

The condenser fans are of direct drive propellor type and are composed of wing contour aluminium blades. All fans have diameter of 800 mm. Each of them is fitted with a painted steel protective guard.

Each fan is equipped with a nozzle profile housing which generates low noise level during the operation of the unit.

## Fan controls

The standard units operate with an external air temperature down to -5 °C thanks to the use of a fan step controller which consists in deactivating a certain number of fans for each step.

A stepless fan speed controller can be supplied as optional in order to allow the units to operate with an external air temperature down to -18 °C.

The minimum external operating temperature on LN and ELN units is -18 °C, thanks to the stepless fan speed controller supplied as standard.

## Refrigerant circuits

Each SLS unit has 2 or 4 independent refrigerant circuits according to the models.

Each refrigerant circuit is composed of components as shown in the section "Refrigerant flow diagrams".

## Electrical board

Electrical board is a metal box of IP54 weather protection, arranged inside the unit and protected by a horizontally pivoted external panel.

On models SLS 3804 and 4004, an auxiliary electrical board (IP54) is located at the opposite end of the unit. In this case, 2-point power supply connections will be supplied. Single point power supply connections can be provided as optional.

## Control and safety devices

All the SLS units are fitted with the following devices :

### Safety :

- Main disconnect switch equipped with an emergency stop.
- HP switches (two on each circuit) set to 26.5 bar : manual reset from control board.
- LP transducers (one on each circuit) used as pressure switches and set to 1 bar : manual reset from control board. Transducers allow also suction pressure reading.
- Anti-freeze temperature sensor (set to +3 °C on shell and tube type evaporator and +4 °C on plate type evaporator).
- Maximum discharge temperature sensor (not displayed).
- Discharge line safety valve set to 29 bar.
- Heat recovery line safety valve set to 29 bar.
- Suction line safety valve set to 29 bar (on units equipped with shell-and-tube heat exchangers only).
- Water differential pressure switch on plate heat exchangers only, set to 104 mbar (50 mbar on models SLS 2202 and 2602), corresponding to about 50% of the nominal flow rate.

### Control :

- HP transducers (one on each circuit).
- Evaporator water inlet temperature sensor.
- Evaporator water outlet temperature sensor.
- Ambient air temperature sensor.
- Heat recovery condenser temperature sensors.

## Controls

The SLS units are supplied with a microprocessor based electronic control and management system ensuring the following functions :

- **Management of liquid / pump down solenoid valves :**
  - Compressor starts when solenoid valve is energized.
  - Pump down takes place when solenoid valve is de-energized.
- **Management of compressor operation :**
  - Start-up / Stop.
  - Management of delays at start-up.
- **Chilled water temperature control on evaporator water return or leaving :**
  - Control on return water : proportional type (RWT P) or integral proportional type (RWT P+I) with integration time to be parametrized.
  - Control on leaving water (LWT).

Standard control : RWT P.

### → Evaporator anti-freeze protection.

### → Fan protection.

### → Hydraulic module management.

### → Management of high and low pressure alarms.

### → Remote control management :

- Unit start-up and stop.
  - Alarm signalling.
- Programming of 4 hour periods with 4 different set points.
  - Alarm records.
  - Counting of compressor and pump (if present) operation hours.
  - Operating mode "Night/Low noise" (for versions LN and ELN only).

The electronic controller provides for a clear signalling, on the LCD, of any unit control parameters, such as :

- Display of the circuit 1 and circuit 2 discharge pressure.
- Display of the circuit 1 and circuit 2 suction pressure.
- Display of the return water temperature.
- Display of the leaving water temperature.
- Display of the ambient air temperature.
- Display of the various alarms and operation states :
  - Inlet water temperature.
  - Outlet water temperature.
  - High / low pressure.
  - Ambient air temperature.
  - Evaporator anti-freeze.
  - Lack of water.
  - Phase sequence monitoring.
  - Compressor thermal protection.
  - Fan thermal protection.
  - Remote unit OFF.
- Remote ON/OFF contact.
- Contacts for the forced unloading of compressors or for the second set point.
- Contacts signalling that the compressors are running.
- Contact signalling that the unit is switched on.
- Contact signalling that the unit is alarmed.

# Technical Description (continued)

---

## Factory-installed options

---

- Condenser coils with blue fins covered with a coating easing the flowing of water.
- Condenser coils with "Fin Guard Silver" (polyurethane) coated fins.
- Condenser coils with copper fins.
- LP & HP manometers.
- Condenser coil guards.
- Chiller grilles.
- Special inverter fans (SIF) with ESP > 100 Pa (for versions BLN and HET only).
- Fan speed controller for versions BLN & HET (not compatible with option SIF).
- Compressor soft starting.
- Power factor correction capacitors.
- Electronic expansion valves.
- Compressor Star/Delta starting (sizes 1202 to 2002, 3804 & 4004).
- Compressor suction valves.
- Compressor oil cooler.
- Compressor oil level switch.
- Shell & tube evaporators (sizes 1202 to 2602, 3804 & 4004).
- Compressor acoustic box (for versions BLN & HET).
- Water pump acoustic box.
- Total heat recovery.
- Desuperheater.
- Antifreeze electric heater for hydraulic manifolds.
- 1 or 2 low/high pressure pump kits with accessories.
- Integrated hydraulic module (with 1 or 2 low/high pressure pump(s) + accessories) equipped with an insulated water tank :
  - 750 litres : models 1202 to 2002.
  - 1000 litres : models SLS 2202 to 2602.

The integrated hydraulic module is not available on units

equipped with shell-and-tube evaporators.

- Single point power supply connections (for models 3804 and 4004).
- GSM modem :

For information communication and transfer by SMS (SIM card not supplied).
- Data logger :

Electronic board memorizing machine information intended for maintenance works :

  - Last memorized alarms (date and type).
  - Entering and leaving water temperature report.
  - Suction and discharge pressure report.

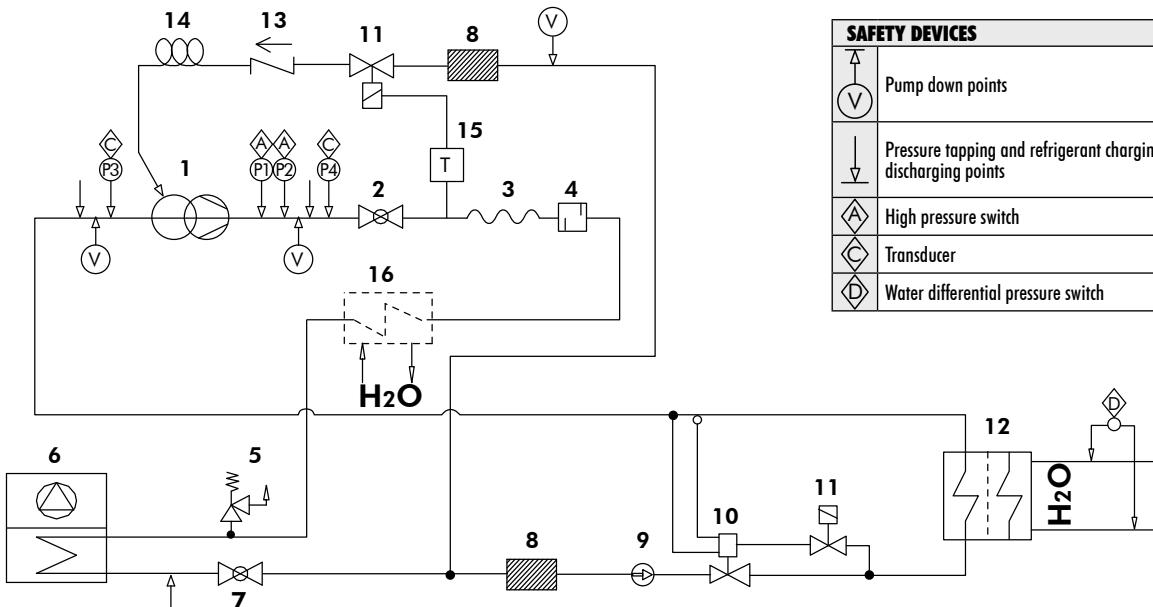

## Field-installed accessories

---

- Water filter.
- Flow switch.
- Rubber pads.
- Spring anti-vibration mounts.
- Hydraulic manifolds for single point in/out water connections (sizes 3804 & 4004).
- External hydraulic module (with 1 or 2 low or high pressure pump(s) + accessories) equipped with an insulated water tank :
  - 1000 litres : model SLS 1202.
  - 1500 litres : models SLS 1402 to 2402.
  - 2500 litres : models SLS 2602 to 4004.
- Remote wall mounted display terminal.
- Chiller-Net : Master/slaves control up to 4 units maximum.
- Modbus protocol kit for BMS.
- Lonwork protocol kit for BMS.
- Bacnet protocol kit for BMS.

# Refrigerant Flow Diagrams

## Unit with plate heat exchanger

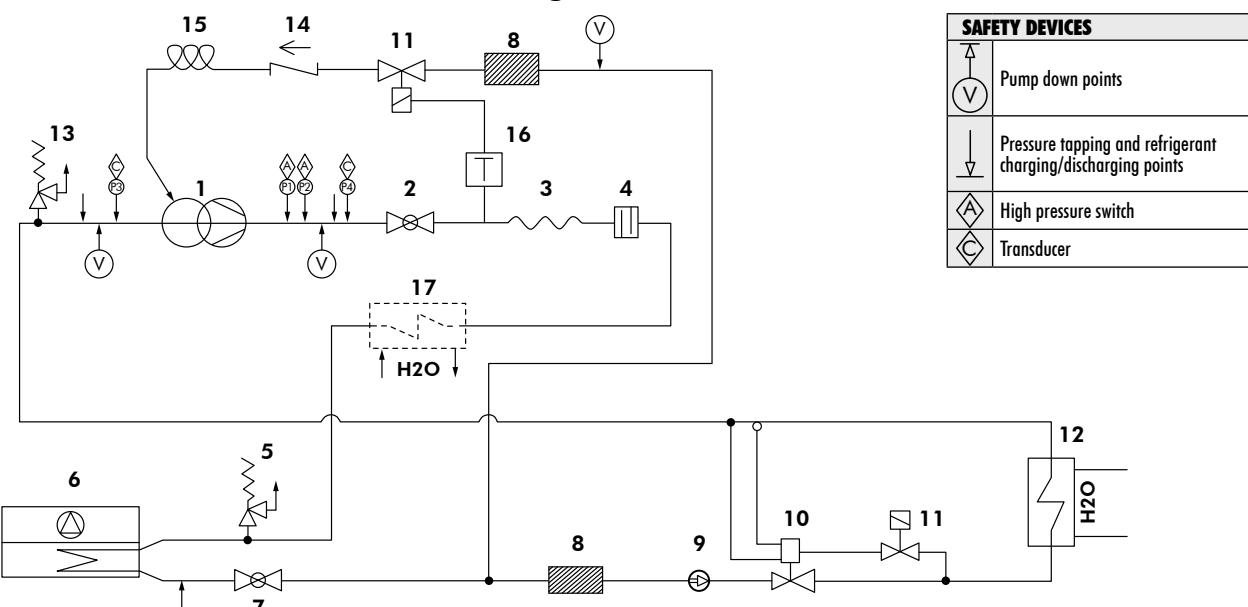

SAFETY DEVICES	
	Pump down points
	Pressure tapping and refrigerant charging/discharging points
	High pressure switch
	Transducer
	Water differential pressure switch

### COMPONENTS

1	Screw compressor	7	Liquid valve	13	Non-return valve
2	Discharge valve	8	Filter-drier	14	Capillary
3	Flexible pipe	9	Sight glass	15	Thermostat
4	Muffler	10	Thermostatic expansion valve	16	Desuperheater (optional)
5	Safety valve	11	Solenoid valve		
6	Condenser coil	12	Plate heat exchanger (evaporator)		

Note : Each unit has 2 or 4 refrigerant circuits according to the models. For reasons of readability, one circuit only is shown.

## Unit with shell and tube heat exchanger

SAFETY DEVICES	
	Pump down points
	Pressure tapping and refrigerant charging/discharging points
	High pressure switch
	Transducer

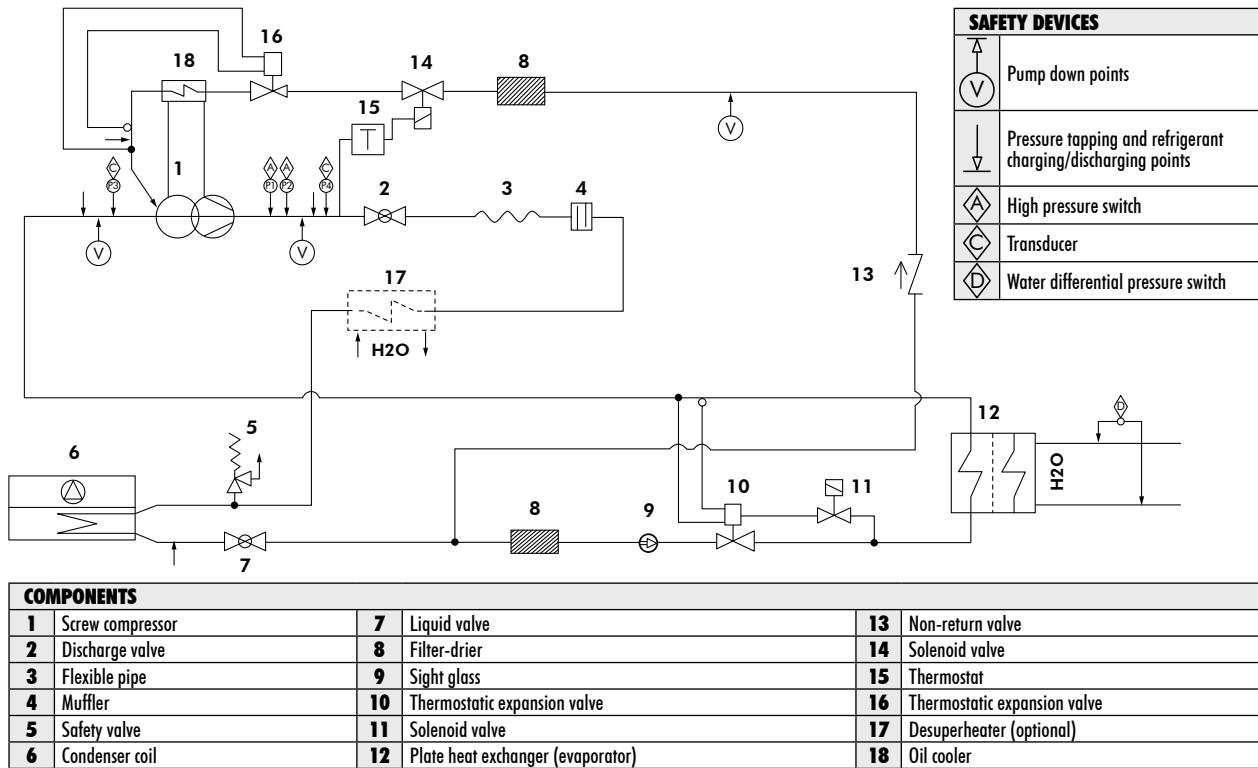

### COMPONENTS

1	Screw compressor	7	Liquid valve	13	Safety valve
2	Discharge valve	8	Filter-drier	14	Non-return valve
3	Flexible pipe	9	Sight glass	15	Capillary
4	Muffler	10	Thermostatic expansion valve	16	Thermostat
5	Safety valve	11	Solenoid valve	17	Desuperheater (optional)
6	Condenser coil	12	Shell and tube heat exchanger (evaporator)		

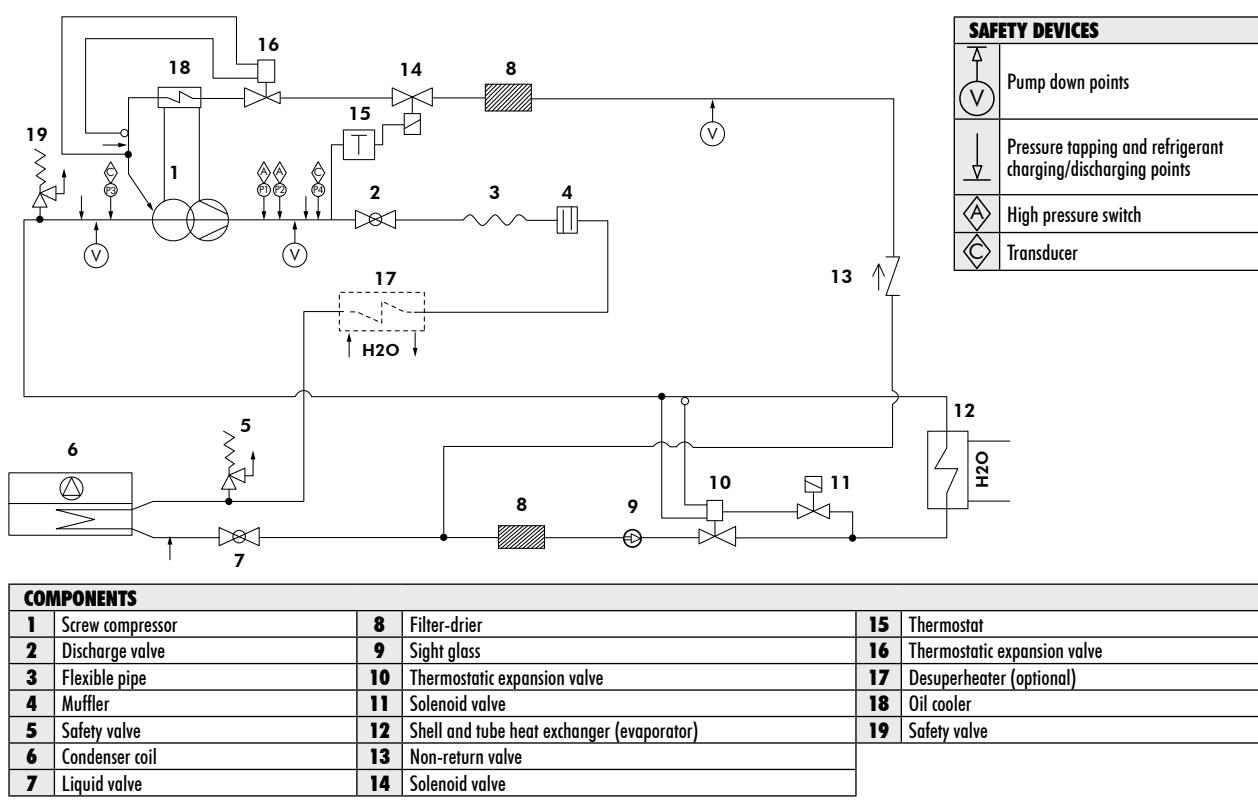

Note : Each unit has 2 or 4 refrigerant circuits according to the models. For reasons of readability, one circuit only is shown.

## Refrigerant Flow Diagram (cont'd)

### Unit with plate heat exchanger and oil cooler for low water temperature application (optional)

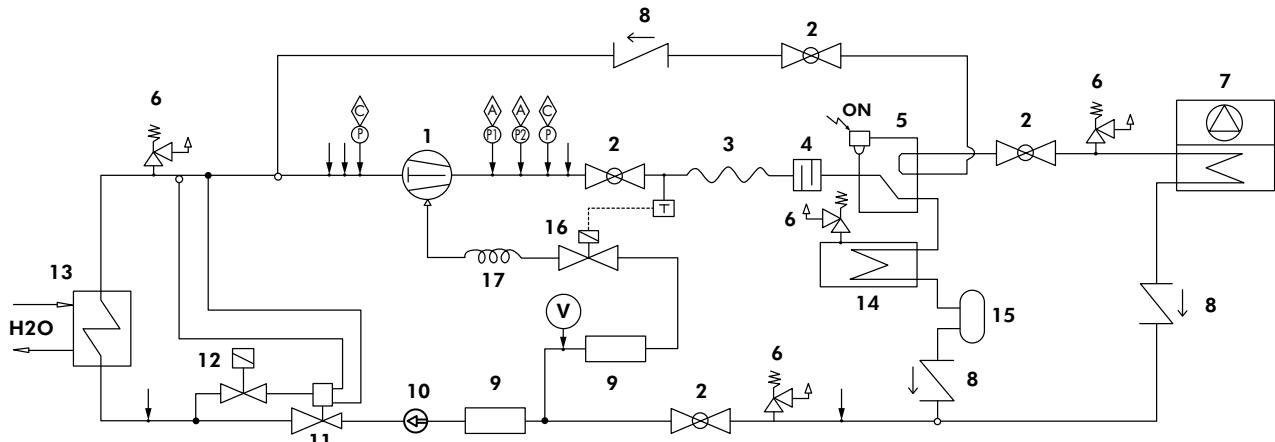

### Unit with shell and tube heat exchanger and oil cooler for low water temperature application (optional)

## Refrigerant Flow Diagram (cont'd)

### Unit with total heat recovery (optional)

#### COMPONENTS

<b>1</b>	Screw compressor	<b>10</b>	Sight glass
<b>2</b>	Shut off valve	<b>11</b>	Thermostatic expansion valve
<b>3</b>	Flexible pipe (ELN version only)	<b>12</b>	Solenoid valve
<b>4</b>	Muffler (ELN version only)	<b>13</b>	Evaporator
<b>5</b>	4-way valve	<b>14</b>	Heat recovery heat exchanger
<b>6</b>	Safety valve	<b>15</b>	Liquid receiver

Notes : - LWT : Leaving water temperature.

- Power input given for compressors only.

## Evaporator Water Pressure Drops

**Note :** For models SLS 3804 to 4004, the water pressure drops correspond to the unit water flow rate divided by 2.

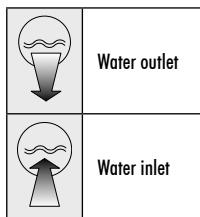

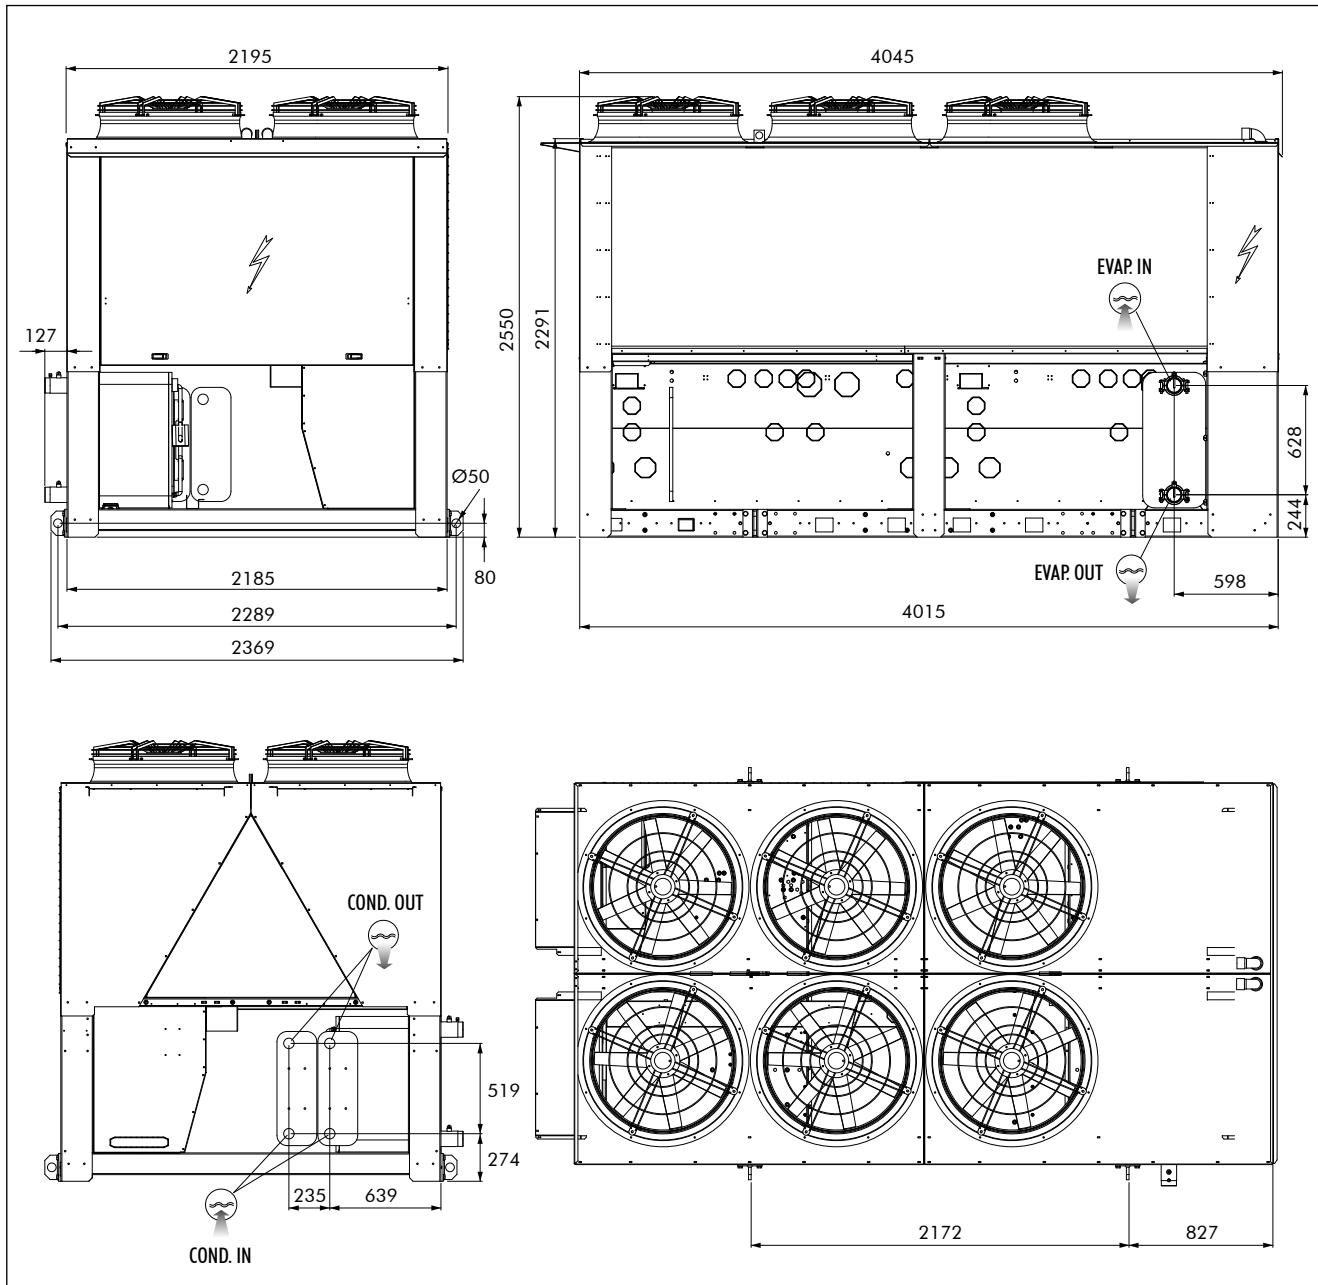

# Total Heat Recovery Condenser Water Pressure Drops

<b>1</b>	SLS 1202	<b>8</b>	SLS 2402
