krom  
schroder

## Stainless steel bellows unit EKO

- Fault-free machine operation due to absorption of thermal and pressure expansions
- High bursting resistance due to multiple-layer bellows
- Axial and lateral movement absorption

## Stainless steel flexible tube ES

- Protection from material fatigue thanks to vibration absorption
- Long service life due to use of stainless steel
- Angular and lateral movement absorption
- Compensation for installation tolerances due to optional lengths
- Reduces structure-borne noise thus improving noise levels

*Stainless steel bellows units with threaded and flanged connections*

## 1 Application

### 1.1 EKO

The stainless steel bellows unit EKO is designed for stress-free and safe pipe installation and to prevent transmission of vibration in gas, air and water installations.

The stainless steel bellows unit EKO can compensate for thermal and pressure expansions in pipelines, disengage elastically-mounted units from the systems to which they are connected and compensate elastically for relative movements between system parts. This results in reduced forces and moments at the connections. The stainless steel bellows unit with its hot-galvanised flange permits the use of landfill gas.

Stainless steel bellows units EKO can optionally be supplied with an integrated restricting orifice for adjusting the gas and air flow rate for gas burners.

The stainless steel bellows unit EKO..R can withstand high temperatures. The EKO..F, EKO..FZ can withstand high temperatures (HTB) in conjunction with flange seals of type WL-HT. The HTB flange seals are available as accessories.

*Stainless steel flexible tubes with threaded and flanged connections*

## 1.2 ES

The stainless steel flexible tube ES is designed for stress-free and flexible connection of devices and pipes and to prevent transmission of vibration in gas, air and water installations.

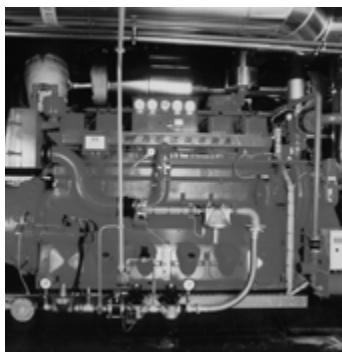

The stainless steel flexible tube ES can absorb vibrations with a high frequency and low amplitude, e.g. in fuel pipes, reduce structure-borne noise in pipelines, for example, compensate for inaccuracies in installation between units and serve as a flexible pipe element on presses, for example. It can be fitted in places where no fixed points can be located.

The stainless steel flexible tube ES is optionally available in any length.

*Stainless steel  
flexible tubes in  
the supply lines of  
buildings*

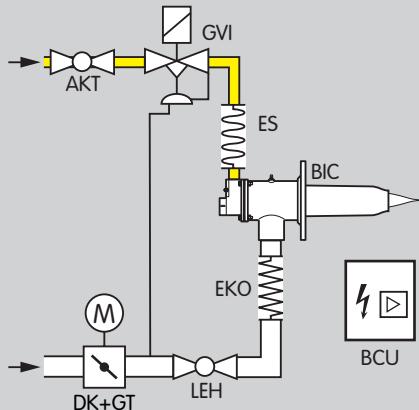

*Stainless steel flex-  
ible tubes on gas  
engine supply lines*

*Stainless steel  
flexible tubes and  
bellows units at the  
kiln in the brick-  
works*

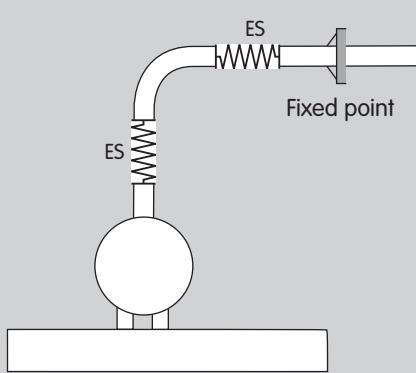

## 1.3 Examples of application

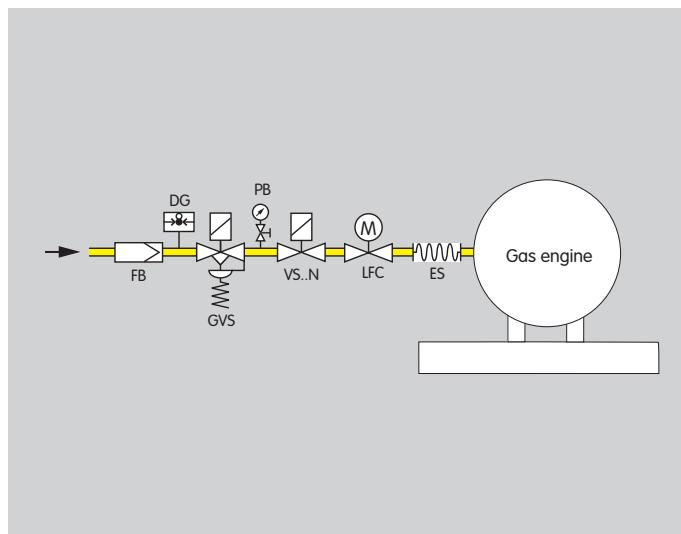

### 1.3.1 Gas and air supply to a drying kiln

Pressure and temperature factors from the burner influence the gas and air supply. The stainless steel flexible tube and bellows unit compensate for the pressure and thermal expansion in the pipelines. They ensure that the process runs without any problem.

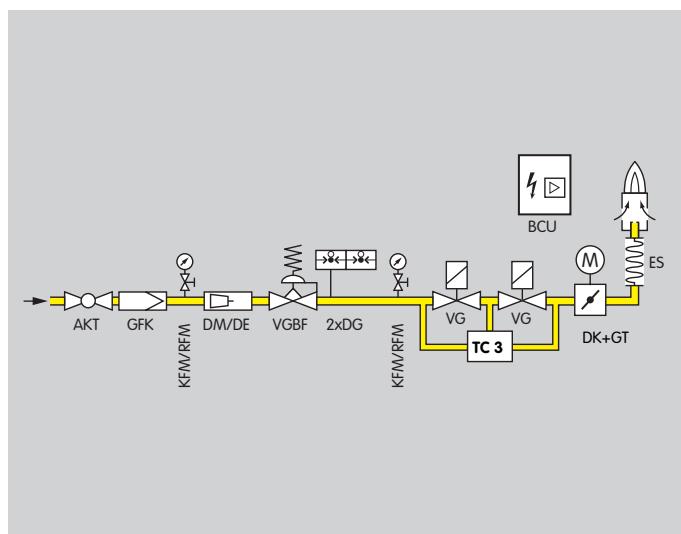

### 1.3.2 Exhaust gas system on a compressor

Two stainless steel flexible tubes mounted at right angles in the exhaust gas pipe reduce vibrations on all sides which the unit causes on the connected pipe.

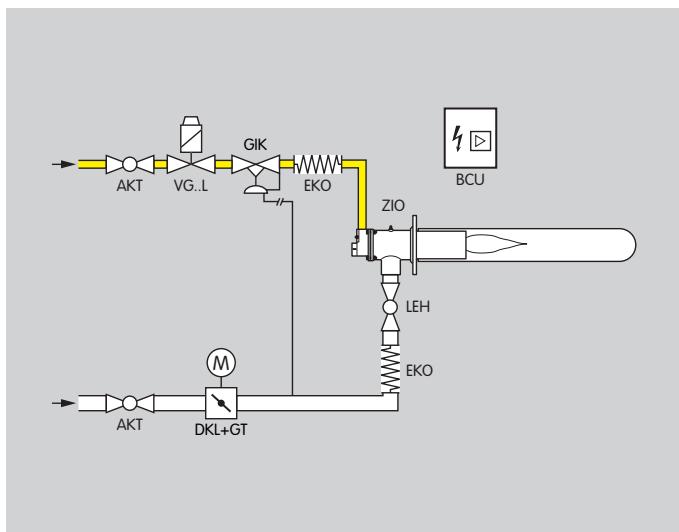

### 1.3.3 Fuel pipes on a gas engine

When a gas engine is connected to the fuel pipes, installation tolerances can occur at the connection points. The simple way to compensate for these is with stainless steel flexible tubes.

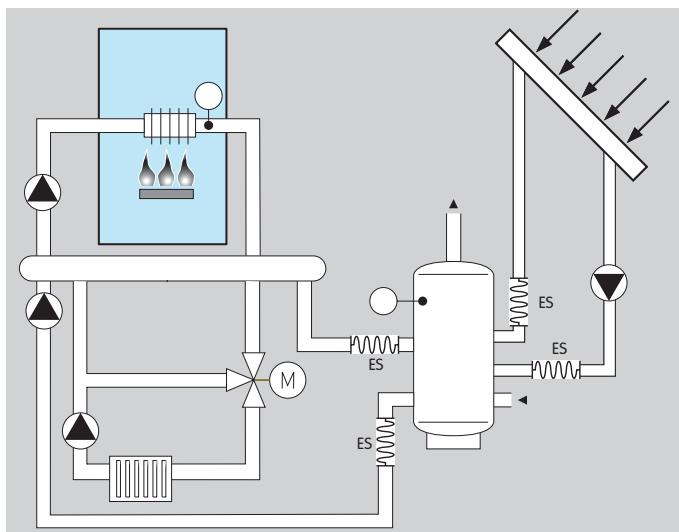

### 1.3.4 Gas pressure control and measurement system

The stainless steel flexible tube offers an effective and cost-efficient solution for protecting gas lines, on thermal flue air purification systems for instance, against thermal expansion. It reduces structure-borne noise in the pipeline.

### 1.3.5 Gas and air supply to an aluminium smelting furnace

Pressure and temperature factors influence the gas and air supply. The stainless steel bellows units compensate for the pressure and thermal expansion in the pipelines. Stainless steel bellows units EKO..10P are specially designed to suit the Kromschröder ZIO burner for a high burner output at low operating pressure.

### 1.3.6 Pipes on a heating and solar system

The pipes between the collector, boiler and storage tank are adapted to the building architecture. Stainless steel flexible tubes are used to compensate favourably for inaccuracies in installation.

## 2 Certification

– DIN-DVGW tested and registered.

| Type                 | DVGW test mark | Test based on |
|----------------------|----------------|---------------|
| EKO..RI, EKO..RA     | NG-4504AS3148  | DIN 30681     |
| EKO..F100P, EKO..F-Z | NG-4504AR3924  | DIN 30681     |
| ES                   | NG-4601AR0759  | DIN 3384      |

- For all gases according to DVGW Code of Practice G 260  
Air and Water.

## 4 Project planning information

If the stainless steel bellows unit EKO or the stainless steel flexible tube ES are used with external aggressive media acting on them, we recommend using additional protection, e.g. a heat shrink tube.

### 4.1 EKO

Only install one stainless steel bellows unit between two fixed points or guide bearings.

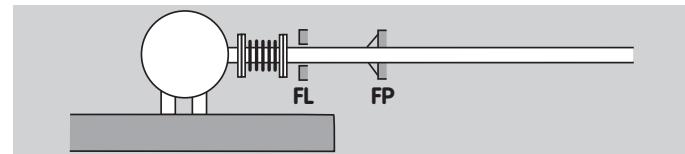

Distance between the bellows unit and the fixed point **FP** or guide bearing **FL**  $\leq 3 \text{ DN}$

Provide fixed points at the ends of pipe sections, which can absorb the axial compression force, the adjustment force of the bellows unit and the friction force of the guide bearings.

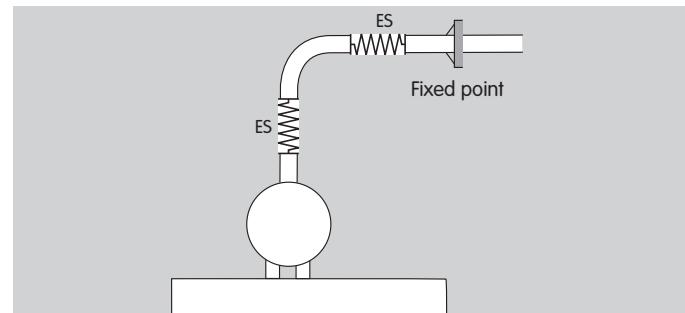

Dynamic stresss

**A** = angular, **L** = lateral – see Technical data, Dimensions EKO..R oder Dimensions EKO..F.

Vibration absorption: Install the bellows unit as close to the vibrating unit as possible to avoid additional movements. Attach the pipeline immediately downstream of the bellows unit, independent of the vibrating unit, using a guide bearing **FL** or a fixed point **FP**.

In the event of vibrations in all directions, install a second bellows unit at a right angle to the first one.

Ensure a sufficiently good stand for the vibrating unit in order to absorb the axial compression force.

Maximum vibration amplitude  $\leq 5$  to  $10\%$  of the movement absorption – see Technical Data, Dimensions EKO..R or Dimensions EKO..F.

Determine the initial stress for the expansion or compression to be expected:

$$V = D \times \left( 0.5 - \frac{t_E - t_{\min}}{t_{\max} - t_{\min}} \right)$$

$V$  = Initial stress [mm],

$D$  = Expansion of pipeline [mm],

$t_E$  = Installation temperature [ $^{\circ}$ C],

$t_{\min}$  = Min. operating temperature [ $^{\circ}$ C],

$t_{\max}$  = Max. operating temperature [ $^{\circ}$ C].

Positive initial stress = expand bellows unit,

negative initial stress = compress bellows unit.

Define the installation space on the basis of the overall length of the bellows unit:

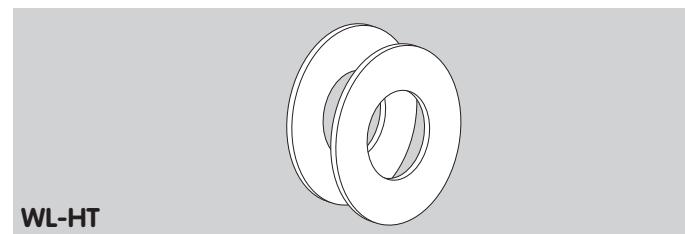

$$L_E = B_L \pm V$$

$L_E$  = Installation space

$B_L$  = Overall length

$V$  = Initial stress.

When a restricting orifice is used – see Accessories – the overall length is increased by 3 mm.

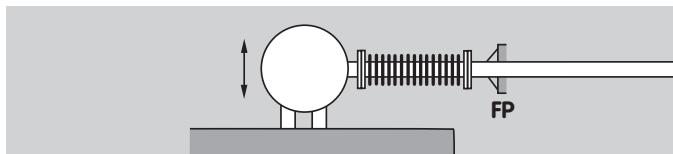

**WL-HT**

**EKO..F**

High temperature bearing in conjunction with WL-HT type flange seal – see Accessories.

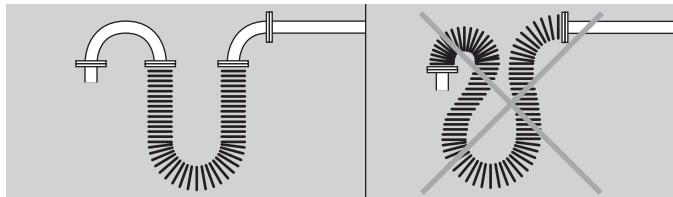

## 4.2 ES

Avoid torsion load on the stainless steel flexible tube.

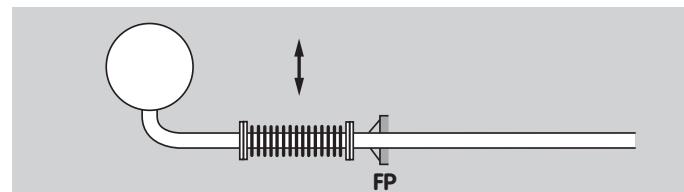

For expansion and vibration absorption, attach the pipeline directly downstream of the stainless steel flexible tube using a fixed point **FP**.

Note the minimum bending radius for one-off or frequent movement – see dimensions ES.

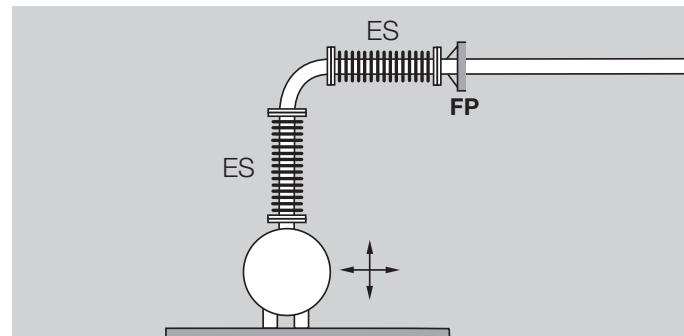

Impermissible bending immediately downstream of the connection element can be avoided by using rigid pipe bends.

Always install the stainless steel flexible tube at right angles to the direction of movement.

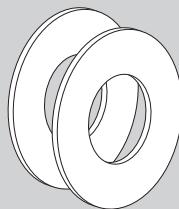

Note distance to the wall or floor.

In the event of vibrations in all directions, install a second stainless steel flexible tube at a right angle to the first one.

## 5 Accessories

### 5.1 Flange seal WL-HT

**WL-HT**

EKO..F, EKO..FZ can only withstand high temperatures conjunction with WL-HT type flange seal for the inlet and outlet

| Flange seal  | Order no. |
|--------------|-----------|
| WL-HT DN 25  | 03352221  |
| WL-HT DN 32  | 03352222  |
| WL-HT DN 40  | 03352223  |
| WL-HT DN 50  | 03352224  |
| WL-HT DN 65  | 03352225  |
| WL-HT DN 80  | 03352226  |
| WL-HT DN 100 | 03352227  |
| WL-HT DN 125 | 03352228  |
| WL-HT DN 150 | 03352229  |
| WL-HT DN 200 | 03352220  |

### 5.2 Restricting orifice

Restricting orifices made of V2A steel can be supplied for stainless steel bellows units EKO if required. Please ask us for a quotation.

## 6 Technical data

Media: natural gas, LPG (gaseous), air and water; other gases on request.

### EKO

The pressure loss at the EKO is approximately twice as high as that of a smooth pipe of the same length.

Stainless steel bellows 1.4571.

### EKO..R

Clamping rings made of stainless steel 1.4301, fittings made of galvanised malleable cast iron REINZ-AFM 34 seal to DIN 3535-6, flat-sealing, resistant to high temperatures (HTB).

Operating temperature:

Air: -20 to +250°C,

Gas: -20 to +250°C,

Water: 0 to +100°C.

Short-term temperature peaks of up to 300°C are admissible.

Max. inlet pressure  $p_e$ :

Air and water: 10 bar,

Gas: 5 bar.

Observe the maximum allowable inlet pressure for dynamic stress and increased temperature – see Reduction factors.

### EKO..F

Bellows and flange made of stainless steel : 1.4571 up to DN 100, 1.4541 > DN 100.

Operating temperature:

Air: -20 to +500°C,

Gas: -20 to +150°C,

Water: 0 to +100°C.

Short-term temperature peaks of up to 300°C are admissible.

Max. inlet pressure  $p_e$ : 10 bar,

EKO 250F10P, EKO 350F10P: 1 bar.

Observe the maximum allowable inlet pressure for dynamic stress and increased temperature – see Reduction factors.

EKO..F cold-galvanised, EKO..FZ hot-galvanised.

High temperature bearing only in conjunction with WL-HT type flange seals Type WL-HT – see Accessories.

**ES**

The pressure loss is approximately twice as high as that of a smooth pipe of the same length. When installed in a 90° bend, it increases at maximum by a factor of 2

Material: stainless steel corrugated tube made of 1.4541, stainless steel sheathing made of 1.4301.

**ES..RA**

Connection sleeves DN 8 to DN 25 on both sides, made of machining steel 1.0718, from DN 32 made of steel 1.0037.

Connection:

1 x external thread, conically sealing,  
1 x hexagon nipple and external thread to EN 10226-1.

Fittings hard-soldered with silver solder up to DN 25, welded from DN 32.

Loose screw attachment parts made of galvanised malleable cast iron or cast steel.

Permissible operating temperature:

Air, Gas and Water: -10 to +300°C.

Max. inlet pressure  $p_e$ :

Air and Water: 16 bar,

Gas: 4 bar.

Observe the maximum allowable inlet pressure for dynamic stress and increased temperature – see Reduction factors.

**ES..F**

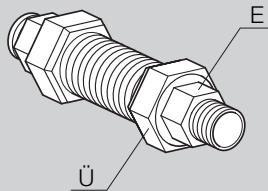

Welding flange made of stainless steel 1.4541, (loose flange made of steel, galvanised, PN 16 to DIN EN 1092-1).

Max. inlet pressure  $p_e$ :

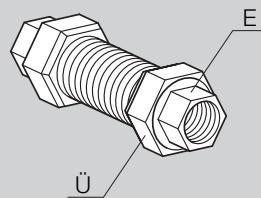

Air, Gas and Water: 16 bar,

Observe the maximum allowable inlet pressure for dynamic stress and increased temperature – see Reduction factors.

## 6.4 Reduction factors EKO, ES

Pressure pulsation, pressure surges, pressure fluctuations, frequent movements, vibrations and high temperatures reduce the max. permissible inlet pressure.

To calculate the permissible inlet pressure:

$$p_e = p_{max} \times k_d \times k_t$$

$p_e$  = permissible inlet pressure [bar]

$p_{max}$  = max. inlet pressure [bar]

$k_d$  = dynamic reduction factor

$k_t$  = temperature reduction factor

### 6.4.1 Dynamic reduction factor $k_d$

|                                     | Slight, slow movement;<br>no vibration | Frequent, uniform<br>movement;<br>vibrations | Rhythmic and surge-<br>type movement;<br>strong vibrations |
|-------------------------------------|--|--|--|
| Stationary or slow and uniform flow | 1                                      | 0.80   | 0.40   |
| Pulsating and non-uniform flow      | 0.80                                   | 0.63   | 0.32   |
| Rhythmic and surge-type flow        | 0.32                                   | 0.20   | On request   |

### 6.4.2 Temperature moderating factor $k_t$

## 7 Maintenance cycles

The stainless steel bellows unit EKO and the stainless steel flexible tube ES require little servicing.

## 8 Glossary

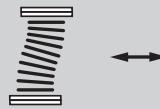

### 8.1 Axial movement

The movement of the stainless steel bellows unit or stainless steel flexible tube is absorbed in the axial direction.

### 8.2 Angular movement

The movement absorption of the stainless steel bellows unit or stainless steel flexible tube takes place at a certain angle.

### 8.3 Lateral movement

The movement of the stainless steel bellows unit or stainless steel flexible tube is absorbed laterally.

### 8.4 Relative movement

The relative movement is the movement of one body in relation to another.

### 8.5 Vibration amplitude

The vibration amplitude is the largest excursion of a vibration from the compressed to the extended bellows unit.

## Feedback

Finally, we are offering you the opportunity to assess this "Technical Information (TI)" and to give us your opinion, so that we can improve our documents further and suit them to your needs.

### Clarity

- Found information quickly
- Searched for a long time
- Didn't find information
- What is missing?
- No answer

### Comprehension

- Coherent
- Too complicated
- No answer

### Scope

- Too little
- Sufficient
- Too wide
- No answer

### Use

- To get to know the product
- To choose a product
- Planning
- To look for information

### Navigation

- I can find my way around
- I got "lost"
- No answer

### My scope of functions

- Technical department
- Sales
- No answer

### Remarks

(Adobe Reader 7 or higher required)
