7. OPERATION DESCRIPTION

7-1. Outline of Air Conditioner Control

This is a fixed capacity type air conditioner, which uses a AC motor for an indoor fan. The AC motor drive circuit is mounted in the indoor unit. And electrical parts which operate the compressor and the outdoor fan motor, are mounted in the outdoor unit.

The air conditioner is mainly controlled by the indoor unit controller. The controller operates the indoor fan motor based upon commands transmitted by the remote control and transfers the operation commands to the outdoor unit controller.

The outdoor unit controller receives operation commands from the indoor unit, and operates the outdoor fan motor and the compressor.

- Role of indoor unit controller
 The indoor unit controller receives the operation commands from the remote control and executes them.
 - Temperature measurement at the air inlet of the indoor heat exchanger by the indoor temperature sensor
 - Temperature setting of the indoor heat exchanger by the heat exchanger sensor
 - Louver motor control
 - Indoor fan motor operation control
 - LED display control
 - Transferring of operation commands to the outdoor unit
 - Receiving of information of the operation status and judging of the information or indication of error
- (2) Role of outdoor unit controller The outdoor unit controller receives the operation commands from the indoor controller and executes them.

Compressor operation control

 Operation control of outdoor fan motor Operations according to the commands from the indoor unit

 Turning off the compressor and outdoor fan when the outdoor unit receives the shutdown command

 Defrost control in heating operation (Temperature measurement by the outdoor heat exchanger and control for the four-way valve and the outdoor fan motor) *Heat pump Model only

7-1-1. Louver control

(1) Vertical air flow louver

Position of veritcal air flow louver is automatically controlled according to the operation mode. Besides, position of vertical air flow louver can be arbitrarily set by pressing [FIX] button. The louver position which is set by [FIX] button is stored in the microcomputer, and the louver is automatically set at the stored position for the next operation.

(2) Swing
If [SWING] button is pressed when the indoor unit is in operation, the vertical air flow louver starts swinging. When [FIX] button is pressed, it stops

swinging.

7-1-2. Indoor fan control (AC Fan motor)

- The indoor fan is operated by the stepless speed change AC motor.
- (2) For air flow level, speed of the indoor fan motor is controlled in five steps (LOW, LOW⁺, MED, MED⁺ and HIGH). If AUTO mode is selected, the fan motor speed is automatically controlled by the difference between the preset temperature and the room temperature.

 $LOW^+ = \frac{LOW + MED}{2}$

 $MED^+ = \frac{MED + HIGH}{2}$

the indoor unit **Table 7-1-1**

7-2. Description of Operation Circuit

- (1) When turning on the breaker, the operation lamp blinks. This means that the power is on (or the power supply is cut off.)
- (2) When pressing [\circlearrowleft] button on the remote control, receiving beep sounds from the indoor unit, and the next operation is performed together with opening the vertical air flow louver.
- (3) Once the operation mode is set, it is memorized in the microcomputer so that the previous operation can be effected thereafter simply by pressing [也] button.

7-2-1. Fan only operation ([MODE] button on the remote control is set to the fan only operation.)

(1) When [FAN] button is set to AUTO, the indoor fan motor operates as shown in Fig. 7-2-1. When [FAN] button is set to LOW, LOW⁺, MED, MED⁺ or HIGH, the motor operates with a constant air flow.

NOTE:

- *1: The values marked with *1 are calculated and controlled by the difference in motor speed between M+ and L-.
- (2) The Hi POWER, ECO and COMFORT SLEEP operation cannot be set.

Fig. 7-2-1 Setting of air flow [FAN:AUTO]

7-2-2. Cooling operation ([MODE] button on the remote control is set to the cooling operation.)

(1) The compressor, 4-way valve, outdoor fan and operation display lamp are controlled as shown in Fig. 7-2-2.

Fig. 7-2-2

(2) When [FAN] button is set to AUTO, the indoor fan motor operates as shown in Fig. 7-2-3. When [FAN] button is set to LOW, LOW+, MED, MED+ or HIGH, the motor operates with a constant air flow.

NOTE:

*1: The values marked with *1 are calculated and controlled by the difference in motor speed between M+ and L-.

Fig. 7-2-3 Setting of air flow [FAN:AUTO]

7-2-3. Dry operation ([MODE] button on the remote control is set to the dry operation.)

(1) The compressor, 4-way valve, outdoor fan and operation display lamp are controlled as shown in Fig. 7-2-4.

Fig. 7-2-4

(2) The microprocessor turns the compressor on and off at the regular intervals (4 to 6 minutes). While the compressor is turning off, the indoor fan motor operates in the SUPER LOW position. The pattern of operation depending on the relation between room temperature and preset temperatures is shown in Fig. 7-2-5.

Fig. 7-2-5

- (3) [FAN] button on the remote control is set to AUTO only.
- (4) The ECO and Hi Power operations can not be set.

7-2-4. Heating operation *Heat pump model only ([MODE] button on the remote control is set to the heating operation.)

(1) The compressor, 4-way valve, outdoor fan and operation display lamp are controlled as shown in Fig. 7-2-6.

Fig. 7-2-6

(2) When [FAN] button is set to AUTO, the indoor fan motor operates as shown in Fig. 7-2-7. When [FAN] button is set to LOW, LOW+, MED, MED+ or HIGH, the motor operates with a constant air flow.

*1, *2: The values marked with *1 and *2 are calculated and controlled by the difference in motor speed between M+ and L.

Fig. 7-2-7 Setting of air flow [FAN:AUTO]

(3) The indoor heat exchanger restricts revolving speed of the fan motor to prevent a cold draft. The upper limit of the revolving speed is shown in Fig. 7-2-8 and Table 7-2-1.

NOTES:

- *1: The fan stops for 2 minutes after thermostat-OFF.
- *2: A is 24°C when the preset temperature is 24°C or more and A is the preset temperature when it is under 24°C.
- *3: SUL means Super Ultra Low.
- *4: Calculated from difference in motor speed between SUL and HIGH.

Fig. 7-2-8 Cold draft preventing control

*5 and *6:

Table 7-2-1

Fan	*5	*6
speed	Starting period	Stabilized period
AUTO	Up until 12 minutes passed after starting the unit From 12 to 25 minutes passed after starting the unit and room temperature is 3°C lower than preset temperature	From 12 to 25 minutes passed after starting the unit and room temperature is between preset temperature and 3°C lower than preset temperature 25 minutes or more passed after starting the unit
Manual (L – H)	Room temperature Preset temperature -4°C	• Room temperature ≧ Preset temperature -3.5°C

7-2-5. Automatic operation ([MODE] button on the remote control is set to the automatic operation.)

- (1) One of 3 operations (Cooling, Fan only or Heating) is selected according to difference between the preset temperature and the room temperature at which the automatic operation has started, as shown in Fig. 7-2-9. The Fan only operation continues until the room temperature reaches a level at which another mode is selected.
- (2) Temporary Auto When the TEMPORARY button on the indoor unit is pushed, the preset temperature is fixed at 24°C and the indoor unit is controlled as shown in Fig. 7-2-9.

Fig. 7-2-9

7-2-6. Plasma Air-Purifier (PAP) operation.

Plasma Air-Purifier is able to operate together with other operations mode of air conditioner by pressing [PAP] button to turn ON/OFF the Plasma Air-Purifier while other mode is on operation.

Plasma Air-Purifier is able to operate individual by pressing [PAP] button to turn ON/OFF instead of pressing [6] button.

For pressing the [ტ] button is able to turn both air conditioner and Plasma Air-Purifier ON/OFF at the same time. (depends on presetting before turning off.)

When [PAP] button is pressed, imark is indicated on the display of the remote control and the Plasma Air-Purifier operates as follows.

(1) Operation flow chat.

Case	Descriptions
A • O	In case of the first operation, after circuit breaker turns OFF/ON or after reset by case No. 4-1, 4-2, 8 and 9. The Air-Purifier will operates after 1 hour.
1&2	For daily used, without turning OFF circuit breaker, Air-Purifier operates immediately.
	By using short timer function of remote control*, Air-Purifier operates immediately.
3	In case of some error occurs within 1 minute, the above items need to be checked.
4 -1	Case no ③, reset by [RESET] button on the indoor unit. Then Air-Purifier will operate again after 1 hour.
4-2	Case no ③, reset by [FILTER] button on the remote control. Then Air-Purifier will operate again after 1 hour.
4 -3	Case no ③, reset by turning OFF the unit and turning ON again. Then Air-Purifier operates immediately.
(5)	In case of some error occurs after 1 minute. Air-Purifier will turn OFF but in contrast, PAP LED will keep turning ON continuously.
6	Case no ⑤, the Air-Purifier will operate again after 10 minute.
7	After complete 500 hours operation, FILTER LED will turn ON and Air-Purifier will turn OFF. In addition, Air-Purifier should be cleaned.
8	Case no ⑦, reset by [RESET] button on the indoor unit, and Air-Purifier will operate again after 1 hour.
9	Case no ⑦, reset by [FILTER] button on the remote control, and Air-Purifier will operate again after 1 hour.
10	Case no ⑦, can not reset by turning unit OFF and ON.

- * Short timer is the function of the remote control that activates the setting for the sudden operation. This function can be set as shown below.
 - 1. Press [ტ] button to turn the unit OFF.
 - 2. Use the tip of the pencil to push the [CHECK] button and hold, "00" will show on display, then press [SET] button to make "00" disappear.
 - 3. Press [6] button again to turn the unit ON.
 - 4. When short timer is activated, all setting on the remote operates immediately, Besides, all LED turns ON continuously for 2 seconds.

(2) The indoor fan motor and Plasma Air-Purifier operation.

- When Plasma Air-Purifier has been operated with other operation of air conditioner mode (Fan only, AUTO, Cooling, Dry or Heat). The speed revolution of indoor fan is based upon the operated mode of air conditioner. In fact, Plasma Air-Purifier works continuously.
- When the Plasma Air-Purifier is activated individually and the fan speed is set to LOW, LOW+, MED, MED+, or HIGH, the speed revolution of the indoor fan will be constant. In fact, Plasma Air-Purifier works continuously.

Moreover, when the Plasma Air-Purifier is activated individually and the fan speed is set to AUTO, the speed revolution of the indoor fan and the operation of Plasma Air-Purifier is shown as the fig. 7-2-10

Fig. 7-2-10

7-3. Hi POWER Mode ([Hi POWER] button on the remote control is pressed.)

When [Hi POWER] button is pressed while the indoor unit is in Auto, Cooling or Heating operation, Hi POWER mark is indicated on the display of the remote control and the unit operates as follows.

(1) Automatic operation

• The indoor unit operates in according to the current operation.

(2) Cooling operation

- The setting temperature drops 3°C.
 (The value of the setting temperature on the remote control does not change.)
- If the room temperature is higher than the setting temperature by 3.5°C or more, the horizontal louver moves to the Hi POWER position automatically. Then when the room temperature is 1°C less than the setting temperature the horizontal louver returns automatically.
- FAN speed: [AUTO]

 If the room temperature is higher than the setting temperature by 3.5°C or more, the air conditioner operates at maximum airflow level. If the room temperature is higher than the setting temperature by less than 3.5°C, the air conditioner operates at normal airflow level.
- FAN speed: One of 5 levels

 If the room temperature is higher than the setting temperature by 3.5°C or more, the air conditioner operates at higher consecutive airflow level. If the room temperature is higher than the setting temperature by less than 3.5°C, the air conditioner operates at normal airflow level.

(3) Heating operation

- The preset temperature increases 2 °C, (The value of the preset temperature on the remote control does not change.)
- The indoor unit operates in normal heating mode except the preset temperature is higher (+2°C).
- (4) The Hi POWER mode can not be set in Dry or Fan only operation.

7-4. High-Temperature Limit Control *Heat pump model only

The microcontroller detects the indoor heat exchanger temperature to prevent pressure of a refrigerating cycle from increasing excessively.

The compressor and outdoor fan motor are controlled as shown in Fig. 7-4-1.

Fig. 7-4-1

7-5. Low-Temperature Limit Control

The microcontroller detects the indoor heat exchanger temperature to prevent the indoor heat exchanger from freezing.

The compressor and outdoor fan motor are controlled as shown in Fig. 7-5-1.

Fig. 7-5-1

7-6. Defrost Operation *Heat pump model only

When the indoor unit is in heating operation, if the refrigerant evaporation temperature detected by the outdoor heat exchanger sensor is under the specified temperature, the outdoor unit starts the defrosting operation. At this time, the 4-way valve relay and the outdoor fan motor are turned off. The indoor fan motor is also turned off by the cold draft preventing control of the indoor microcomputer. Then, [PRE. DEF.] lamp on the indoor unit comes on.

The defrosting operation stops and the 4-way valve relay, outdoor fan motor and the indoor fan motor are turned on automatically when the refrigerant evaporation increases to the specified temperature, or when the defrosting time is over 12 minutes.

7-6-1. Defrost starting condition

A-Zone : If -10° C > Teo $\ge -18^{\circ}$ C, defrost will

start when.

Teo - Te ≥ 2.5°C at teat 20 sec or

~ 30 min after operation.

B-Zone : If $Te \le -18$ °C, defrost start instantaneously

(Suddenly) 00 ~ 25 min ofter operation

C-Zone : If $-2^{\circ}C \ge Teo \ge -10^{\circ}C$ defrost will start when

Teo - Te ≤ -3 °C at least 20 sec or ~ 60 min

after operation.

7-6-2. Defrost finish condition.

- 1) If $Te \ge 3^{\circ}C$ at least 60 sec -->4 way value on.
- 2) If $Te \ge 8^{\circ}C \longrightarrow 4$ way value on.

Timing

Defrost time rate : (Td/Tt) x 100 Heating time rate : (Tt - Td) x Tt

Fig. 7-6-2

7-7. Auto Restart Function

The indoor unit is equipped with an automatic restarting function which allows the unit to restart operating with the set operating conditions in the event of power supply being accidentally shut down. The operation will resume without warning three minutes after power is restored.

This function is not set to work when shipped from the factory. Therefore it is necessary to set it to work.

7-7-1. How to set auto restart function

To set the auto restart function, proceed as follows: The power supply to the unit must be on; the function will not set if the power is off.

Push the [TEMPORARY] button located in the center of the front panel continuously for three seconds. The unit receives the signal and beeps three times. The unit then restarts operating automatically in the event of power supply being accidentally shut down.

When the unit is on standby (Not operating)

Operation	Motio	ns	
Push [TEMPORARY] button for more	The unit is on standby.		
than three seconds.	↓		
	The unit starts to operate.	The green lamp is on.	
	↓ After approx. three seconds,		
0 35	The unit beeps three times	The lamp changes from	
<u> </u>	and continues to operate.	green to orange.	
TEMPORARY button	If the unit is not required to operate at this time, push [TEMPORARY		
	button once more or use the remot	e control to turn it off.	

When the unit is in operation

Operation	Motie	ons
Push [TEMPORARY] button for more	The unit is in operation.	The green lamp is on.
than three seconds.	↓	
	The unit stops operating.	The green lamp is turned off.
	↓ After approx. three seconds,	
(A) DDG	The unit beeps three times.	
TEMPORARY button	If the unit is required to operate at this time, push [TEMPORARY] button once more or use the remote control to turn it on.	

- While this function is being set, if the unit is in operation, the orange lamp is on.
- This function can not be set if the timer operation has been selected.
- When the unit is turned on by this function, the louver will not swing even though it was swinging automatically before shutting down.
- While the filter check lamp is on, the [TEMPORARY] button has the function of filter reset button.

7-7-2. How to cancel auto restart function

To cancel auto restart function, proceed as follows: Repeat the setting prodedure: the unit receives the signal and beeps three times.

The unit will be required to be turned on with the remote control after the main power supply is turned off.

When the unit is on standby (Not operating)

Operation	Motio	ons	
Push [TEMPORARY] button for more	The unit is on standby.		
than three seconds.	↓		
	The unit starts to operate.	The orange lamp is on.	
	↓ After approx. three seconds,		
	The unit beeps three times	The lamp changes from	
TEMPORARY button	and continues to operate.	orange to green.	
TEMPORART BUILDIT	If the unit is not required to operate at this time, push [TEMPORARY		
	button once more or use the remo	ote control to turn it off.	

When the unit is in operation

Operation	Mo	otions
Push [TEMPORARY] button for more than three seconds.	The unit is in operation. ↓	The orange lamp is on.
	The unit stops operating. ↓ After approx.	The orange lamp is turned off. three seconds,
338	The unit beeps three times.	
TEMPORARY button	If the unit is required to operate button once more or use the re	e at this time, push [TEMPORARY] mote control to turn it on.

• While this function is being set, if the unit is in operation, the orange lamp is on.

7-7-3. Power failure during timer operation

When the unit is in Timer operation, if it is turned off because of power failure, the timer operation is cancelled. Therefore, set the timer operation again.

7-8. Filter Check Lamp

When the elapsed time reaches 1000 hours, the filter check lamp indicates. After cleaning the filters, turn off the filter check lamp.

7-8-1. How to turn off filter check lamp

Press [FILTER] button on the remote control. OR push [TEMPORARY] button on the indoor unit.

Note:

If [TEMPORARY] button is pushed while the filter check lamp is not indicating, the indoor unit will start the Automatic Operation.

7-9. Self-Cleaning function.

Self-Cleaning function is designed to reduce humidity that causes mold to form inside the air conditioning unit. This advanced, efficient system reduces moisture in the coil. When you turn off your air conditioner, the internal fan activates and dries the moisture in the coil for 20 minutes, then turns off automatically.

Operation display	ON	OFF	OFF			
FCU fan	ON rpm is depend on preseting.	ON rpm is SUL speed.	OFF			
FCU louver	OPEN	CLOSE	CLOSE			
Timer display	ON or OFF depend on preseting of timer function.	ON	ON or OFF depend on preseting of timer function.			
Compressor	ON or OFF depend on preseting per room temperature.	OFF	OFF			
CDU fan	ON or OFF depend on preseting per room temperature.	OFF	OFF			
	Cool mode or dry mode operation more than 10 mins.		Operation time			
	Turn off by remote controller					

or timer-off function.

- The Self-Cleaning function is set as default at ex-factory.
- Self-Cleaning operation can stop manually by press [∅] botton of the remote control two more time.

7-9-1. How to cancel Self-Cleaning function

To cancel the Self-Cleaning function, proceed as follows:

- Press TEMPORARY button one time or use remote control to turn on air conditioner. The OPERATION display will show in orange color (When AUTO-RESTART is ON) or green color (When AUTO-RESTART is OFF).
- Hold down the TEMPORARY button for more than 20 seconds. (The air conditioner will stop suddenly when the TEMPORARY is pressed but keep holding it continue. Then will beep 3 times in the first 3 seconds but it is not related to Self-Cleaning function)
- After holding about 20 seconds, the air conditioner will beep 5 times without any blinking of display.
- The Self-Cleaning Operation had been concelled.

Remarks

 Per setting of Self-Cleaning function above, AUTO-RESTART function had been cancelled. To set AUTO-RESTART again, please follow item 7-7-1.

7-9-2. How to set Self-Cleaning function.

To set the Self-Cleaning function, proceed as follows.

- Press TEMPORARY button one time or use remote control to turn on air conditioner. The OPERATION display will show in orange color (When AUTO-RESTART is ON) or green color (When AUTO-RESTART is OFF).
- Hold down the TEMPORARY button for more than 20 seconds.
 (The air conditioner will stop suddenly when the TEMPORARY is pressed but keep holding it continue. Then will beep 3 times is the first 3 seconds but it is not related to Self-Cleaning function)
- After holding about 20 seconds, the air conditioner will beep 5 times and OPERATION display blinks 5 times.
- · The Self-Cleaning function had been set.

Remarks

 Per setting of Self-Cleaning function above, AUTO-RESTART function had been cancelled. To set AUTO-RESTART again, please follow item 7-7-1.

7-10. QUIET Mode

Quiet mode is the system which, control the revolving speed of indoor fan to work constantly at lower than speed L. In addition, noise level of indoor unit is less than usual.

When the [QUIET] button is pressed, the fan of the indoor unit will be restricted the revolving speed at speed L - until the [QUIET] button is pressed once again (cancel Quiet mode).

Remarks:

- 1. Quiet mode is unable to work in dry mode.
- Quiet mode is appropriate to work with less cooling load and less heating load condition.
 Because of the fan speed L- may cause not enough the cooling capacity or heating capacity.

7-11. COMFORT SLEEP mode

The principles of comfort sleep mode are:

- · Quietness for more comfortable.
- Save energy by changing room temperature automatically.
- The air condition can shut down by itself automatically.

Remarks:

- 1. Comfort sleep mode will not operate in dry mode and fan only mode.
- Comfort sleep mode is appropriate to work with less cooling load and less heating load condition.
 Because of the fan speed L- may cause not enough the cooling capacity or heating capacity.

7-11-1. Cooling mode

• The fan speed of indoor unit operates automatically, it relates with the compressor's operation.

Compressor's Operation	Fan Speed
ON	L-
OFF	SL

- The preset temperature will increase 1°C after the Comfort sleep mode has operated for 1 hour and the temperature will increase another 1°C after the comfort sleep mode has operated for 2 hour. (The value of the preset temperature on the remote control does not change.)
- Press the [COMFORT SLEEP] button to choose the operating hours. Repeat pressing to select the hours. (1hr, 3hr, 5hr or 9hr)
- If the [COMFORT SLEEP] button is pressed again means cancel comfort sleep mode.

7-11-2. Heating mode

 The fan speed of indoor unit operates automatically, it relates with the compressor's operation.

Compressor's Operation	Fan Speed
ON	L-
OFF	SL

- The preset temperature will drop down 1°C after the comfort sleep mode has operated for 1 hour and the temperature will decrease another 1°C after the comfort sleep mode has operated for 2 hour. (The value of the preset temperature on the remote control. dose not change.)
- Press the [COMFORT SLEEP] button to choose the operating hours. Repeat pressing to select the hours. (1hr, 3hr, 5hr or 9 hr)
- If the [COMFORT SLEEP] button is pressed again means cancel comfort sleep mode.

8. INSTALLATION PROCEDURE

8-1. Safety Cautions

For general public use

Power supply cord of Outdoor unit shall be more than 4 mm² (H07RN-F or 245 IEC66 : polychloroprene sheathed flexible cord) or 3.5 mm² (AWG-12).

CAUTION

To Disconnect the Appliance from the Main Power Supply.

This appliance must be connected to the main power supply by means of a circuit breaker or a switch with a contact separation of at least 3 mm.

If this is not possible, a power supply plug with earth must be used. This plug must be easily accessible after installation. The plug must be disconnected from the power supply socket in order to disconnect the appliance completely from the mains.

DANGER

- FOR USE BY QUALIFIED PERSONS ONLY.
- TURN OFF MAIN POWER SUPPLY BEFORE ATTEMPTING ANY ELECTRICAL WORK. MAKE SURE ALL POWER SWITCHES ARE OFF. FAILURE TO DO SO MAY CAUSE ELECTRIC SHOCK.
- CONNECT THE CONNECTING CABLE CORRECTLY. IF THE CONNECTING CABLE IS CONNECTED WRONGLY, ELECTRIC PARTS MAY BE DAMAGED.
- CHECK THE EARTH WIRE THAT IT IS NOT BROKEN OR DISCONNECTED BEFORE INSTALLATION.
- DO NOT INSTALL NEAR CONCENTRATIONS OF COMBUSTIBLE GAS OR GAS VAPORS. FAILURE TO FOLLOW THIS INSTRUCTION CAN RESULT IN FIRE OR EXPLOSION.
- TO PREVENT OVERHEATING THE INDOOR UNIT AND CAUSING A FIRE HAZARD, PLACE THE UNIT WELL AWAY (MORE THAN 2 M) FROM HEAT SOURCES SUCH AS RADIATORS, HEATORS, FURNACE, STOVES, ETC.
- WHEN MOVING THE AIR-CONDITIONER FOR INSTALLING IT IN ANOTHER PLACE AGAIN, BE VERY
 CAREFUL NOT TO GET THE SPECIFIED REFRIGERANT (R410A) WITH ANY OTHER GASEOUS
 BODY INTO THE REFRIGERATION CYCLE. IF AIR OR ANY OTHER GAS IS MIXED IN THE
 REFRIGERANT, THE GAS PRESSURE IN THE REFRIGERATION CYCLE BECOMES ABNORMALLY
 HIGH AND IT RESULTINGLY CAUSES BURST OF THE PIPE AND INJURIES ON PERSONS.
- IN THE EVENT THAT THE REFRIGERANT GAS LEAKS OUT OF THE PIPE DURING THE INSTALLATION WORK, IMMEDIATELY LET FRESH AIR INTO THE ROOM. IF THE REFRIGERANT GAS IS HEATED BY FIRE OR SOMETHING ELSE, IT CAUSES GENERATION OF POISONOUS GAS.

WARNING

- Never modify this unit by removing any of the safety guards or bypassing any of the safety interlock switches.
- Do not install in a place which cannot bear the weight of the unit.
 - Personal injury and property damage can result if the unit falls.
- Before doing the electrical work, attach an approved plug to the power supply cord. Also, make sure the equipment is properly earthed.
- Appliance shall be installed in accordance with national wiring regulations.
 If you detect any damage, do not install the unit. Contact your TOSHIBA dealer immediately.

CAUTION

- Exposure of unit to water or other moisture before installation could result in electric shock. Do not store it in a wet basement or expose to rain or water.
- After unpacking the unit, examine it carefully for possible damage.
- Do not install in a place that can increase the vibration of the unit. Do not install in a place that can amplify the noise level of the unit or where noise and discharged air might disturb neighbors.
- To avoid personal injury, be careful when handling parts with sharp edges.
- Please read this installation manual carefully before installing the unit. It contains further important instructions for proper installation.

REQUIREMENT OF REPORT TO THE LOCAL POWER SUPPLIER

Please make absolutely sure that the installation of this appliance is reported to the local power supplier before installation. If you experience any problems, or if the installation is not accepted by the supplier, the service agency will take adequate countermeasures.

Remark per EMC Directive 89/336/EEC (For Europe model only)

To prevent flicker impressions during the start of the compressor (technical process) following installation conditions do apply.

- 1. The power connection for the air conditioner has to be done at the main power distribution. This distribution has to be of an impedance.
 - Normally the required impedance is reached at a 32A fusing point. Air conditioner fuse has to be 16A max.!
- 2. No other equipment should be connected to this power line.
- 3. For detailed installation acceptance, please contact your power supplier whether its restriction does apply for products like washing machines, air conditioners or electrical ovens.
- 4. For power details of the air conditioner, refer to the rating plate of the product.

8-2. Installation Diagram of Indoor and Outdoor Units

8-3. Installation

8-3-1. Optional installation parts

Part Code	Parts name	Q'ty
A	Refrigerant piping Liquid side: Ø6.35 mm Gas side: Ø12.70 mm (18 series) : Ø15.88 mm (24 series)	One each
B	Pipe insulating material (polyethylene foam, 6 mm thick)	1
©	Putty, PVC tapes	One each

<Fixing bolt arrangement of outdoor unit>

Fig. 8-3-2

- Secure the outdoor unit with fixing bolts and nuts if the unit is likely to be exposed to a strong wind.
- Use Ø8 mm or Ø10 mm anchor bolts and nuts.
- If it is necessary to drain the defrost water, attach drain nipple (9) to the bottom plate of the outdoor unit before installing it.

8-3-2. Accessory and installation parts

Part No.	Part name (Q'ty)	Part No.	Part name (Q'ty)	Part No.	Part name (Q'ty)
1		4		7	
	Installation plate x 1		Remote control holder x 1		Mounting screw Ø 4 x 25ℓ x 8
2	Wireless remote control x 1	5	Sasa-Zeolite plus filter x 2	8	Pan head wood screw \varnothing 3.1 x 16 ℓ x 2

Others

Name
Owner's manual
Installation manual

The part marked with asterisk (*) is packaged with the outdoor unit.

8-4. Indoor Unit

8-4-1. Installation place

- A place which provides the spaces around the indoor unit as shown in the above diagram.
- A place where there is no obstacle near the air inlet and outlet.
- A place that allows easy installation of the piping to the outdoor unit.
- A place which allows the front panel to be opened.

CAUTION

- Direct sunlight to the indoor unit's wireless receiver should be avoided.
- The microprocessor in the indoor unit should not be too close to RF noise sources.
 (For details, see the owner's manual.)

<Remote control>

- A place where there are no obstacles such as a curtain that may block the signal from the indoor unit.
- Do not install the remote control in a place exposed to direct sunlight or close to a heating source, such as a stove.
- Keep the remote control at least 1 m apart from the nearest TV set or stereo equipment. (This is necessary to prevent image disturbances or noise interference.)
- The location of the remote control should be determined as shown below.

Fig. 8-4-1

8-4-2. Cutting a hole and mounting installation plate

<Cutting a hole>

When installing the refrigerant pipes from the rear.

Fig. 8-4-2

 After determining the pipe hole position on the mounting plate (→), drill the pipe hole (Ø65 mm) at a slight downward slant to the outdoor side.

NOTE

 When drilling a wall that contains a metal lath, wire lath or metal plate, be sure to use a pipe hole brim ring sold separately.

<Mounting the installation plate>

Fig. 8-4-3

<When the installation plate is directly mounted on 8-4-3. Electrical work</p> the wall>

- 1. Securely fit the installation plate onto the wall by screwing it in the upper and lower parts to hook up the indoor unit.
- 2. To mount the installation plate on a concrete wall with anchor bolts, utilize the anchor bolt holes as illustrated in the above figure.
- 3. Install the installation plate horizontally in the wall.

CAUTION

When installing the installation plate with a mounting screw, do not use the anchor bolt hole. Otherwise the unit may fall down and result in personal injury and property damage.

Fig. 8-4-4

CAUTION

Failure to firmly install the unit may result in personal injury and property damage if the unit falls.

- In case of block, brick, concrete or similar type walls, make 5 mm dia. holes in the wall.
- Insert clip anchors for appropriate 7 mounting screws.

NOTE

Secure four corners and lower parts of the installation plate with 6 to 7 mounting screws to install it.

- 1. The supply voltage must be the same as the rated voltage of the air conditioner.
- 2. Prepare the power source for exclusive use with the air conditioner.

NOTE

• Wire type: More than 1.5 mm² (H07RN-F or 245 IEC66) or 1.3 mm² (AWG-16)

CAUTION

• This appliance can be connected to the mains in the following way.

Connection to fixed wiring:

A switch or circuit breaker which disconnects all poles and has a contact separation of at least 3 mm must be incorporate in the fixed wiring. An approved circuit breaker or switches must used.

NOTE

Perform wiring works so as to allow a generous wiring capacity.

8-4-4. Wiring connection

Fig. 8-4-5

<How to connect the connecting cable>

Wiring of the connecting cable can be carried out without removing of the front panel.

- Remove the air inlet grille.
 Open the air inlet grille upward and pull it toward you.
- 2. Remove the terminal cover and cord clamp.
- 3. Insert the connecting cable (according to local cords) into pipe hole on the wall.
- Take out the connecting cable through the cable slot on the rear panel so that it protrudes about 15 cm from the front.
- 5. Insert the connecting cable fully into the terminal block and secure it tightly with screws.
- 6. Tightening torque: 1.2 N·m (0.12 kgfám).
- 7. Secure the connecting cable with the cord clamp.
- 8. Fix the terminal cover, rear plate bushing and air inlet grille on the indoor unit.

CAUTION

- Be sure to refer to the wiring system diagram labeled inside the front panel.
- Check local electrical cords and also any specific wiring instructions or limitations.

Fig. 8-4-6

<Stripping length of connecting cable>

Fig. 8-4-7

NOTE

Use stranded wire only.

 Wire type: More than 1.5 mm² (H07RN-F or 245 IEC66) or 1.3 mm² (AWG-16)

Fig. 8-4-8

NOTE

Connect the earth line to the metallic part (\pm mark) located at the side of 3P terminal.

<How to install the air inlet grille on the indoor unit>

 When attaching the air inlet grille, the contrary of the removed operation is performed.

Fig. 8-4-9

8-4-5. Piping and Drain Hose Installation <In case of rightward piping>

 After scribing slits of the body-right by a knife or a making-off pin, cut them by a pair of nippers or the like.

Fig. 8-4-10

<In case of downward piping>

 After scribing slits of the body-right by a knife or a making-off pin, cut them by a pair of nippers or the like.

Fig. 8-4-11

<Left-hand connection with piping>

Bend the connecting pipe so that it is laid within 43 mm above the wall surface. If the connecting pipe is laid exceeding 43 mm above the wall surface, the indoor unit may unstably be set on the wall. When bending the connecting pipe, make sure to use a spring bender so as not to crush the pipe.

Bend the connection pipe within a radius of 30 mm.

To connect the pipe after installation of the unit (figure)

Fig. 8-4-12

NOTE

If the pipe is bent incorrectly, the indoor unit may unstably be set on the wall.

After passing the connecting pipe through the pipe hole, connect the connecting pipe to the auxiliary pipes and wrap the facing tape around them.

CAUTION

 Bind the auxiliary pipes (two) and connecting cable with facing tape tightly. In case of leftward piping and rear-leftward piping, bind the auxiliary pipes (two) only with facing tape.

- Carefully arrange pipes so that any pipe does not stick out of the rear plate of the indoor unit.
- Carefully connect the auxiliary pipes and connecting pipes to each other and cut off the insulating tape wound on the connecting pipe to avoid double-taping at the joint, moreover, seal the joint with the vinyl tape, etc.
- Since dewing results in a machine trouble, make sure to insulate both the connecting pipes. (Use polyethylene foam as insulating material.)
- When bending a pipe, carefully do it not to crush it.

8-4-6. Indoor unit fixing

- 1. Pass the pipe through the hole in the wall, and hook 1. Run the drain hose sloped downwards. the indoor unit on the installation plate at the upper hooks.
- 2. Swing the indoor unit to right and left to confirm that it is firmly hooked up on the installation plate.
- 3. While pressing the indoor unit onto the wall, hook it at the lower part on the installation plate. Pull the indoor unit toward you to confirm that it is firmly hooked up on the installation plate.

Fig. 8-4-13

For detaching the indoor unit from the installation plate, pull the indoor unit toward you while pushing its bottom up at the specified parts.

Fig. 8-4-14

8-4-7. Drainage

NOTE

Hole should be made at a slight downward slant on the outdoor side.

Fig. 8-4-15

- 2. Put water in the drain pan and make sure that the water is drained out of doors.
- 3. When connecting extension drain hose, insulate the connecting part of extension drain hose with shield pipe.

Fig. 8-4-16

CAUTION

Arrange the drain pipe for proper drainage from the unit.

Improper drainage can result in dew-dropping.

This air conditioner has the structure designed to drain water collected from dew, which forms on the back of the indoor unit, to the drain pan.

Therefore, do not store the power cord and other parts at a height above the drain guide.

Fig. 8-4-17

8-5. Outdoor Unit

8-5-1. Installation place

- A place which provides the spaces around the outdoor unit as shown in the left diagram.
- A place which can bear the weight of the outdoor unit and does not allow an increase in noise level and vibration.
- A place where the operation noise and discharged air do not disturb your neighbors.
- · A place which is not exposed to a strong wind.
- A place free of a leakage of combustible gases.
- A place which does not block a passage.
- When the outdoor unit is to be installed in an elevated position, be sure to secure its feet.
- An allowable length of the connecting pipe is up 15 m. (Refer to the table of TO CHARGE REFRIGERANT for detail.)
- An allowable height level is up to 8 m. (RAS-18NA) or 10 m. (RAS-24NA)
- A place where the drain water does not raise any problem.

CAUTION

- 1. Install the outdoor unit without anything blocking the air discharging.
- When the outdoor unit is installed in a place exposed always to a strong wind like a coast or on a high story of a building, secure the normal fan operation using a duct or a wind shield.
- 3. Specially in windy area, install the unit to prevent the admission of wind.
- 4. Installation in the following places may result in trouble.

Do not install the unit in such places.

- A place full of machine oil.
- A saline-place such as the coast.
- · A place full of sulfide gas.
- A place where high-frequency waves are likely to be generated as from audio equipment, welders, and medical equipment.

Fig. 8-5-1

8-5-2. Refrigerant piping connection

1. Cut the pipe with a pipe cutter.

Fig. 8-5-2

- 2. Insert a flare nut into the pipe, and flare the pipe.
 - Projection margin in flaring: A (Unit: mm)

Fig. 8-5-3

Outer dia.	Α		
of copper pipe	Rigid	Imperial	
6.35	1.0 to 1.5	1.5 to 2.0	
12.70	1.0 to 1.5	2.0 to 2.5	
15.88	1.0 to 1.5	2.0 to 2.5	

<Tightening connection>

Align the centers of the connecting pipes and tighten the flare nut as far as possible with your fingers. Then tighten the nut with a spanner and torque wrench as shown in the figure.

CAUTION

- Do not apply excess torque.
- Otherwise, the nut may crack depending on the conditions.

Outer dia. of copper pipe	Tightening torque	
Ø6.35 mm	16 to 18 (1.6 to 1.8 kgf·m)	
Ø12.70 mm	50 to 62 (5.0 to 6.2 kgf·m)	
Ø15.88 mm	65 to 80 (6.5 to 8.0 kgf·m)	

Tightening torque of flare pipe connections

Fig. 8-5-4

Fig. 8-5-5

CAUTION

KEEP IMPORTANT 4 POINTS FOR PIPING WORK

- (1) Take away dust and moisture (Inside of the connecting pipes.)
- (2) Tight connection (between pipes and unit)
- (3) Evacuate the air in the connecting pipes using VACUUM PUMP.
- (4) Check gas leak (connected points)

(Unit: N·m) 8-5-3. Evacuating

After the piping has been connected to the indoor unit, you can perform the air purge together at once.

AIR PURGE

Evacuate the air in the connecting pipes and in the indoor unit using a vacuum pump. Do not use the refrigerant in the outdoor unit. For details, see the manual of the vacuum pump.

<Using a vacuum pump>

Be sure to use a vacuum pump with counter-flow prevention function so that inside oil of the pump does not flow backward into pipes of the air conditioner when the pump stops.

- 1. Connect the charge hose from the manifold valve to the service port of the gas side packed valve.
- 2. Connect the charge hose to the port of vacuum pump.
- 3. Open fully the low pressure side handle of the gauge manifold valve.
- 4. Operate the vacuum pump to start for evacuating. Perform evacuating for about 15 minutes if the piping length is 20 meters. (15 minutes for 20 meters) (assuming a pump capacity of 27 liters per minute.) Then confirm that the compound pressure gauge reading is -101 kPa (-76 cmHg).
- 5. Close the low pressure side valve handle of gauge manifold.
- 6. Open fully the valve stem of the packed valves (both side of Gas and Liquid).
- 7. Remove the charging hose from the service port.
- 8. Securely tighten the caps on the packed valves.

Fig. 8-5-6

TO CHARGE REFRIGERANT				
Refri gerant	RAS-24NKD-E5 / RAS-24NA-E RAS-24NKDX5 / RAS-24N2AX	RAS-18NKHD-E5 / RAS-18NAH-E RAS-18NKD-E5 / RAS-18NA-E RAS-18NKDX5 / RAS-18N2AX		
No need to charge extra refrigerant	15 m or less	15 m or less		
Need to charge extra refrigerant	Over 15 m up to 25 m (30 g/m)	Over 15 m up to 20 m (20 g/m)		

<Packed valve handling precautions>

- Open the valve stem all the way out; but do not try to open it beyond the stopper.
- Securely tighten the valve stem cap with torque in the following table:

Gas side	Tightening torque	Α
Gas side (∅15.88 mm)	65 to 80 N·m (6.5 to 8.0 kgf·m)	4 mm
Gas side (∅12.70 mm)	60 to 62 N·m (6.0 to 6.2 kgf·m)	4 mm
Liquid side (Ø6.35 mm)	16 to 18 N·m (1.6 to 1.8 kgf·m)	Same as Gas side
Service port	9 to 10 N·m (0.9 to 1.0 kgf·m)	

• Hexagonel wrench: A (Unit: mm)

Fig. 8-5-7

8-5-4. Wiring connection

- 1. Remove the valve cover from the outdoor unit.
- 2. Connect the connecting cable to the terminal as identified with their respective matched numbers on the terminal block of indoor and outdoor unit.
- When connecting the connecting cable to the outdoor unit terminal, make a loop as shown in the installation diagram of indoor and outdoor unit, to prevent water coming in the outdoor unit.
- 4. Insulate the unused cords (conductors) from any water coming in the outdoor unit. Proceed them so that they do not touch any electrical or metal parts.

<Stripping length of connecting cable>

Fig. 8-5-8

Model	RAS-24NKD-E5 / RAS-24NA-E RAS-24NKDX5 / RAS-24N2AX	RAS-18NKHD-E5 / RAS-18NAH-E RAS-18NKD-E5 / RAS-18NA-E RAS-18NKDX5 / RAS-18N2AX	
Power source	50 Hz, 220 –240 V Single phase		
Maximum running current	18A	16A	
Plug socket & fuse rating	20A	20A	
Power cord	4 mm ² (H07RN-F or 245 IEC66) or 3.5 mm ² (AWG-12)		

CAUTION

- Wrong wiring connection may cause some electrical parts burn out.
- Be sure to comply with local codes on running the wire from indoor unit to outdoor unit (size of wire and wiring method etc).
- Every wire must be connected firmly.

NOTE: Connecting cable

 Wire type: More than 1.5 mm² (H07RN-F or 245 IEC66) or 1.3 mm² (AWG-16)

8-6. How to Set Remote Control Selector Switch

When two indoor units as installed in seperated rooms, there is no need to change the selector switch.

<Remote control selector switch>

- When two indoor units are installed in the same room or the adjacent two rooms, they may be controlled simultaneously with a single remote control. To prevent this, set either unit and its remote control to B setting. (Both units are set to A setting before shipment.)
- The remote control signal is not recived when the indoor unit setting is different from the remote control one.

Set the remote control selector switch with the indoor unit.

- 1) Turn the circuit breaker of the main power switch off before setting the selector switch.
- 2) Remove the Air inlet grille and Front panel. (Refer to Chapter 10-1, procedure ①)
- 3) Open the Electrical part cover (Refer to chapter 10-1, procedure ②), then cut the jumper (J90) with only the nippers.

CAUTION

Do not use any other sharp tools (such as cutters, pliers, or the like), Such tools may cause breakage or damage.

See Fig. 8-6-1

Fig. 8-6-1

Set the remote control selector switch with the remote control

[B] is indicated on the liquid crystal display when setting remote control from A to B. [A] is not indicated on the display even if the selector is set to A.

- 1) Load the remote control with the batteries.
- 2) Press the [CHECK] button using something with sharp point. (The preset temperature on the remote control changes to [00].)
- 3) Press the [MODE] button while pressing the [CHECK] button, [B] is indicted at the right of the present temperature display.
- To reset the switch to the [A] setting, press the [MODE] button again while pressing the [CHECK] button.

Fig. 8-6-2

3. Confirm that the indoor unit can operate with the new setting.

 Check the flare nut connections, valve stem cap connections and service port cap connection for gas leak with a leak detector or soap water.

Fig. 8-7-1

 Check the flare nut connections, valve stem cap connections and service port cap connections for gas leak with a leak detector or soap water.

8-7-2. Test operation

To switch the TEST RUN (COOL) mode, press TEMPORARY button for 10 sec. (The beeper will make a short beep.)

Fig. 8-7-2

8-7-3. Auto restart setting

This product is designed so that, after a power failure, it can restart automatically in the same operating mode as before the power failure.

Information

The product was shipped with Auto Restart function in the off position. Turn it on as required.

<How to set the auto restart>

- Press and hold the TEMPORARY button for about 3 seconds. After 3 seconds, the electronic beeper makes three short beeps to tell you the Auto Restart has been selected.
- To cancel the Auto Restart, follow the steps described in the section Auto Restart Function of the Owner's Manual.

9. TROUBLESHOOTING CHART

9-1. Troubleshooting Procedure:

Follow the details of 9-2. Basic Check Items. If there is no trouble corresponding to 9-2, check whether or not there are faulty parts following 9-4. Self-Diagnosis by Remote Control.

9-2. Basic Check Items

9-2-1. Power supply voltage

The line voltage must be AC 220 - 240 V. If it is not within this range, the air conditioner may not operate normally.

9-2-2. Incorrect cable connection between Indoor and outdoor units

The indoor unit is connected to the outdoor unit with 4 cables. Check that the indoor and outdoor units have been properly connected with terminals assigned the same numbers. If the connectors are not properly connected, the outdoor unit will not operate normally, or OPERATION lamp and TIMER lamp will blink (5 Hz).

9-2-3. Program control

The microcontroller operates as shown in Table 9-2-1 to control the air conditioner. If there are any operational problems, check whether or not the problems correspond to Table 9-2-1. If they correspond to the Table, they are not problems with the air conditioner, but they are indispensable operations to control and maintain the air conditioner properly.

Table 9-2-1

No.	Operation of air conditioner	Descriptions
1	When the main power supply is turned on, the OPERATION lamp on the indoor unit blinks.	The OPERATION lamp blinks to indicate that power is turned on. If the [也] button is pressed, the lamp stops blinking.
2	The indoor fan motor speed does not change in the Dry operation.	The indoor fan motor speed is automatically controlled in the Dry operation.
3	The compressor is not turned off even though the room temperature is in the range that the compressor is turned off.	The compressor has a function that it is not turned off for 3 minutes after it is turned on even though the room temperature is in the range that the compressor is turned off.
4	The compressor is not turned on and off even though the thermo control is operated in the Dry operation.	In the Dry operation, the compressor is turned on and off automatically at the regular intervals, independent of the thermo control.
*5	The PRE-DEF. lamp is indicated when the Heating operation starts.	The PRE-DEF. lamp is indicated during the Defrosting operation or if the indoor heat exchanger temperature is low when the Heating operation starts. At this time, the indoor fan motor stops to prevent cold air from blowing in the room.
*6	The outdoor fan motor stops in the Heating operation.	When the indoor heat exchanger temperature is high, the outdoor fan motor is stopped by the high-temperature limit control operation.
7	The compressor is not turned on even though the room temperature is in the range that the compressor is turned on.	The compressor is not turned on in the restart delay timer (3-minutes timer) operation. It is also not turned on after the power supply is turned on because of this timer operation.
8	The operation mode changes in the Automatic operation.	In Automatic operation, the room temperature is detected all time for control fan speed and the operation mode is changed every 15 minutes according to difference between the room temperature and the preset temperature.
9	The Fan only operation continues in the Automatic operation.	When the room temperature is in the range (Preset temperature ± 1°C), the Fan only operation is selected.
10	The ECO operation or Hi-POWER operation does not work.	These operations do not work when the unit is in the Dry operation or Fan only operation.
11	When [Hi POWER] button is pressed, the display on the remote control does not change at all.	The display on the remote control does not change when [Hi POWER] button is pressed. However the microcontroller gives commands to change the preset temperature and air flow level.

Note *5 and *6 are for Heat pump model:

9-3. Primary Judgement

9-3-1. Role of indoor unit controller

The indoor unit controller receives the operation commands from the remote control and executes them.

- Temperature measurement at the air outlet of the indoor heat exchanger by the indoor temperature sensor
- Temperature setting of the indoor heat exchanger by the heat exchanger sensor
- Louver motor control
- Indoor fan motor operation control
- LED display control
- Transferring of operation commands to the outdoor unit

9-3-2. Failure diagnosis

The indoor unit diagnoses the operation condition and indicates the information of the self-diagnosis with the lamps on the display panel of the indoor unit.

Table 9-3-1

	Lamps	Self-diagnosis
Α	OPERATION lamp is blinking. (1 Hz)	Power failure (when the power supply is turning on)
В	OPERATION lamp is blinking. (5 Hz)	Thermo sensor (TA) short or break
С	OPERATION lamp is blinking. (5 Hz)	Heat exchanger sensor (TC) short or break
D	OPERATION lamp is blinking. (5 Hz)	Indoor fan motor lock or failure
Е	OPERATION lamp is blinking. (5 Hz)	Indoor P.C. board failure
F	OPERATION and TIMER lamps are blinking. (5 Hz)	Wrong wiring of connecting cable
G	OPERATION, TIMER and PRE-DEF. (or FAN ONLY for cooling only model) lamps are blinking.	Cycle failure Gas shortage or other refrigerant cycle trouble Heat exchanger sensor open, break or short Overload relay or thermostat trouble of compressor

Table 9-3-2 Diagnosis by detective operation

Symptom	Check	Primary judgement	
The remote control does not work.	Turn off the power supply once, then turn it on. Try to operate	The remote control still does not work.	The indoor unit (and/or remote control) is/are defective.
	the remote control.	The remote control works.	OK.
The outdoor fan does not rotate.			The outdoor unit (Outdoor fan motor) is defective.
			An internal part of the compressor or P.C. board is defective.

9-4. Self-Diagnosis by Remote Control (Check Code)

- (1) If the lamps are indicated as shown B to G in Table 9-3-1, exchanger the self-diagnosis by the remote control.
- (2) When the remote control is set to the service mode, the indoor controller diagnoses the operation condition and indicate the information of the self-diagnosis on the display of the remote control with the check codes. If a fault is detected, all lamps on the indoor unit will blink at 5Hz and it will beep for 10 seconds (Pi, Pi, Pi....). The timer lamp usually blinks (5Hz) during the self-diagnosis.

9-4-1. How to use remote control in service mode

-(1) Press [CHECK] button with a tip of pencil to set the remote control to the service mode.
 - "00" is indicated on the display of the remote control.
 - The timer lamp on the indoor unit blinks continuously. (5 times per 1 sec.)
 - (2) Press [ON ▲] or [OFF ▼] button. If there is no fault with a code, the indoor unit will beep once (Pi) and the display of the remote control will change as follows:

$$\longrightarrow$$
 00 \longrightarrow 01 \longrightarrow 02 ···1d \longrightarrow 1E \longrightarrow 33 $-$

- Check the unit with all 52 check codes (00 to 33). as shown in Table 9-4-1.
- Press [ON ▲] or [OFF ▼] button to change the check code backwards.

If there is a fault, the indoor unit will beep for 10 seconds (Pi, Pi, Pi...).

Note the check code on the display of the remote control.

- 2-digits alphanumeric will be indicated on the display.
- All lamps on the indoor unit will blink.
 (5 times per 1 sec.)
- :--- (3) Press [CLR] button. After service finish for clear service code in memory.
 - "7F" is indicated on the display of the remote control.
- :---- (4) Press [ტ] button to release the service mode.
 - The display of the remote control returns to as it was before service mode was engaged.
- Alphanumeric characters are used for the check code.
 - 5 is 5. 5 is 6.
 - A is A. b is B.
 - \mathcal{L} is C. \mathcal{L} is D.

- (5) Time shotening method.
 - 1. Press [SET] button while pressing [CHECK] button.
 - 2. Press [ტ] button.

Table 9-4-1

Block level			Diagnosis func		1		
Check code	Block	Check code	Symptom	Unit status	Condition	Judgement and action	
	Indoor P.C. board		The indoor thermo sensor (TA) is defective. Disconnection or short-circuit	Operation continues.	The lamp on the indoor unit blinks when error is defected.	Check the indoor thermo sensor (TA). Check the indoor P.C. board.	
			The indoor heat exchanger sensor (TC) is defective. Disconnection or short-circuit	Operation continues.	The lamp on the indoor unit blinks when error is defected.	Check the indoor heat exchanger sensor (TC). Check the indoor P.C. board.	
		11	The indoor fan motor or its circuit is defective.	All off	The lamp on the indoor unit blinks when error is defected.	Check the connector circuit of the indoor fan motor (CN10). Check the indoor fan motor. Check the indoor P.C. board.	
		12	The part other than the above parts on the indoor P.C. board is defective. EEPROM access error	Operation continues.	The lamp on the indoor unit blinks when error is defected.	Check the indoor P.C. board. (EEPROM and peripheral circuits)	
		21	IOL operation	All off	The lamp on the indoor unit blinks when error is defected.	Overload operation of refrigerating cycle	
	Cable connection	Cable connection		The serial signals can not be transmitted and received between indoor and outdoor units. The crossover wire is connected wrongly. The serial signal transmitting circuit on the outdoor P.C. board is defective. The serial signal receiving circuit on the indoor P.C. board is defective.	Operation continues.	The lamp on the indoor unit blinks when error is defected.	1. In the case of the outdoor unit not operating at all; • Check the crossover cable and connect it properly. • Check the outdoor P.C. board. 2. In the case of the outdoor unit operating normally; • Check whether or not both of serial LED (Green) and serial LED (Orange) is blinking. If the serial LED (Green) is not blinking, check the outdoor P.C. board. If the serial LED (Orange) is not blinking, check the indoor P.C. board.
		05	The operation command signals are not transmitted from the indoor unit to the outdoor unit.	Operation continues.	The lamp on the indoor unit blinks when error is defected. And it returns to the normal condition when recovering from errors.	If the operation command signals continue to be transmitted between ② and ③ of the indoor terminal block, replace the outdoor P.C. board.	
	Outdoor P.C. board	18	The outdoor thermo sensor (TE) is defective. Disconnection or short-circuit	All off	The lamp on the indoor unit blinks when error is defected.	Check the outdoor thermo sensor (TE). Check the outdoor P.C. board.	
		19	The outdoor heat exchanger (TD) sensor is defective. Disconnection or short-circuit	All off	The lamp on the indoor unit blinks when error is defected.	Check the outdoor heat exchanger sensor (TD). Check the outdoor P.C. board.	
03	Other parts (including compressor)		The reply serial signal has been transmitted when starting the unit, but stops being transmitted shortly after. 1. Compressor thermo operation • Gas shortage • Gas leak 2. Instantaneous power failure	Operation continues.	The lamp on the indoor unit blinks when error is defected. And it returns to the normal condition when recovering from errors.	1. Repeatedly turn the indoor unit on and off with the interval of approx. 10 to 40 minutes. (The check code is not indicated during operation.) And supply gas. (Check gas leak.) 2. The indoor unit operates normally during the check. If the reply serial signal continues to be transmitted between ② and ③ of the indoor terminal block, replace the outdoor P.C. board. If the signal stops between them, replace the indoor P.C. board.	
		IE	The discharge temperature is over 120°C.	All off	The lamp on the indoor unit blinks when error is defected.	Check the heat exchanger sensor (TD). Gas purging	
			The IOL operation is defective.	All off	The lamp on the indoor unit blinks when error is detected.	When turning on the unit, the normal phase (RST) is detected but T-R waveform has not been detected for 120 seconds or more.	

9-5. How To Diagnose Faulty Parts

[08 Four-way valve error] (Heat pump model)

[09 Other cycle error] (1) (Heat pump model)

[09 Other cycle error] (2)

[0C Indoor TA sensor error]

[0d Indoor TC sensor error]

[18 outdoor TE sensor error] (Heat pump model)

[19 outdoor TD sensor error] (Heat pump model)

[1E Discharge temp. error] (Heat pump model)

9-6. Troubleshooting for Indoor unit

9-6-1. Power can not be turned on. (The unit does not operate at all.)

<Primar check>

- (1) Is the supply voltage normal?
- (2) Is the connection to the AC output OK?
- (3) Is the fuse (F01) blown?

9-6-2. Only the indoor fan does not operate

<Primary check>

- (1) Is it possible to detect the power supply voltage (200 –240V) between ① and ② on the terminal block?
- (2) Does the indoor fan motor operate in cooling operation? (In heating operation, the indoor fan motor does not operate for approximately 5 minutes after it is turned on, to prevent a cold air from blowing in.)

9-6-3. Compressor does not operate.

<Primary check>

- (1) Is the preset temperature higher than the room temperature in cooling operation?
- (2) Is the crossover cable connected properly?

<Inspection procedure>

<Inspection procedure>

- Cooling model -

<Inspection procedure)

- Heating model -

9-7. Troubleshooting for Wiring (Interconnect cable and Serial Signal Wire)

9-7-1. Outdoor unit does not operate.

<Inspection procedure>

- (1) Is the voltage between 1 and 2 of the indoor terminal block varied?
- (2) Are signals from the indoor unit to the outdoor unit transmitted correctly based upon the following diagram?

NOTE:

Measure the voltage for 2 minutes and 30 seconds after starting the unit.

Heatpump model

Normal condition : Voltage varied between AC70 ~ 100V

Abnormal condition: Voltage does not vary.

Cooling model

Fig. 9-7-1

Normal condition : After start operated about 2 minutes and 30 seconds. Voltage between ② and ③ of the

of the indoor's Terminal block should be equal AC 220 ~ 240V

Abnormal condition: Don't found voltage AC 220 ~ 240V from terminal block (0V)

9-7-2. Outdoor unit stops a while after starting the unit.

<Confirmation procedure> Select one of 3 cases below and follow the procedure.

(1) The outdoor unit stops between 10 and 20 minutes passed after starting and it takes 10 minutes or more to restart the unit.

(2) The outdoor unit stops once, it would not operate until the power is turned on again.

Refer to 9-6-4 "Compressor does not operate"

(3) The outdoor unit stops between 10 minutes to 1 hour after starting and a check code is indicated on the remote control. (Check code 03-1E: Refer to Table 9-4-1.)

9-8. Troubleshooting for Air Purifier and Minus Ion

9-8-1. How to Check Whether the Air Purifier is Good or Not

9-8-2. How to Check Whether the Minus Ion Generator is Good or Not

9-9. Troubleshooting for P.C. board

9-9-1. How to check indoor P.C. board

<Cautions for handling P.C. board>

- (1) When removing the front panel and the P.C. board, be sure to turn off the power supply.
- (2) When removing the P.C. board, hold the edge of the P.C. board and do not apply force to the parts.
- (3) When connecting or disconnecting the connectors on the P.C. board, hold the housing. Do not pull at lead wires.

<Inspection procedure>

- If the P.C. board is detective, check for disconnection, burn or discoloration of the copper foil pattern of the P.C. board.
- (2) The P.C. board consists of the following 2 parts: a. Main P.C. board parts.

Power relay, indoor fan motor drive circuit and control circuit, C.P.U. and peripheral circuits, buzzer drive circuit and buzzer.

b. Infrared rays parts:

Infrared rays receiving circuit

Check the defects of the P.C. board with Table 9-8-1.

Table 9-9-1 Inspection procedure

No.	Procedure	Check points	Causes	
1	Turn off the power supply and remove the P.C. board assembly from electric parts base. Remove the connecting cables from the terminal block.	Check whenther or not the fuse (F01) is blown.	Impluse voltage was applied or the indoor fan motor short-circuited.	
2	Remove the connector of the motor and turn on the power supply. If OPERATION lamp blinks (once per second), it is not necessary to check steps (1 to 3) in the right next column.	Check power supply voltage; 1. Between CN30 and CN31 (220 – 240 V AC): Except 2. Between + and – of C63 (DC310 – 340 V) 3. Between 12 V and GND 4. Between 5 V and GND	The terminal block or the crossover cable is connected wrongly. The capacitor (C01 and C02) line filter (L01), resistor (R319), or the diode (DB01) is defective. C65, C66 and M01 are defective. IC04, C05, C06 and C07 are defective.	
3	Press [①] button once to start the unit. (Do not set the mode to Fan Only or On-Timer operation).	Check power supply voltage; <heat model="" pump=""> 1. Between CN31 and CN23 (DC15 – 60 V) <cooling model="" only=""> 1. Between connector of Q24 and GND (for relay coil (DC12 V)) 2. Between 1 and 2 of terminal block for connecting cable</cooling></heat>	<heat model="" pump=""> IC32 and IC33 are defectice. <cooling model="" only=""> 1. The wire of the relay coil (RY04) comes down or the relay drive (Q24) is defective. 2. CN27 or RY04 is connected wrongly.</cooling></heat>	
4	Shorten the line of the restart delay timer and start unit.	Check whether or not all lamps (OPERATION, TIMER, PREDEF. (or FAN ONLY), FILTER. and Hi Power) are indicated for 3 seconds and they return to normal 3 seconds later.	The lamps are defective or the housing assembly (CN13) is defective.	

No.	Procedure	Check points	Causes
5	Press [(b)] button once to start the unit. Shorten the time of the restart delay timer. Set the operation mode to COOL. Set the fan speed level to AUTO. Set the preset temperature much lower than the room temperature. (The unit (compressor) operates continuously in the above condition.)	Check whether or not the compressor operates. Check whether or not the OPERATION lamp blinks.	The temperature of the indoor heat exchanger is extremely low. The connection of the heat exchanger sensor is loose. (The connector is disconnected.) (CN01) The heat exchanger sensor and the P.C. board are defective. (Refer to Table 9-8-2.) The main P.C. board is defective.
6	If the above condition (No. 6) still continues, start the unit in the following condition. Set the operation mode to HEAT. Set the preset temperature much higher than room temperature.	Check whether or not the compressor operates. Check whether or not the OPERATION lamp blinks.	 The temperature of the indoor heat exchanger is extremely high. The connector of the heat exchanger sensor short-circuited. (CN01) The heat exchanger sensor and the P.C. board are defective. (Refer to Table 9-8-2.) The main P.C. board is defective.
7	Connect the motor connector to the motor and turn on the power supply. Start the unit in the following condition. Set the operation mode to FAN. Set the fan speed level to HIGH. (The unit (compressor) operates continuously in the above codition.)	 Check it is impossible to detect the voltage (DC 12 V) between ① and ③ of the motor terminals. The motor does not operate. (But it is possible to receive the signal from the remote control.) The motor rotates but vibrates strongly. 	The indoor fan motor is defective. (Protected operation of P.C. board) The connection of the motor connector is loose. The P.C. board is defective.

Table 9-9-2 Approximate resistance value of thermo sensor

 $(k\Omega)$

					` '
Temperature	0°C	10°C	20°C	25°C	30°C
Resistance value	33.8	20.35	12.59	10.0	7.99

9-9-2. How to Shorten Time of Restart Delay Timer

- ① Press [SET] button while pressing [CHECK] button with a tip of a pencil.
- ② Then press [ტ] button to transmit the signal to the indoor unit.

9-9-3. How to self/cancel self cleaning function

The self cleaning function is set from a factory.

To cancel this function, should keep press the

RESET switch on Indoor unit for 20 secounds till

can hear the long combination sound and repeat the
same procedure when need to set.

10. PART REPLACEMENT

10-1. Indoor Unit

No.	Part name	Procedures	Remarks
•	Front panel	 How to remove the front panel Stop the operation of the air conditioner and turn off its main power supply. Pull the inlet grille toward you to open it and remove the inlet grille. Take off the right side of air filter. Pull out the plasma air purifier and remove 4 screws fixing the front panel before open the horizontal louver and then remove the front panel from back body by pulling it toward you. Open the horizontal grille right below by hand. Pull the lower side of the front panel toward you until it touches the horizontal grille to remove it. How to mount the front panel Mount the front panel with the inverse procedure of "How to remove the front panel". Push 3 places (right, left and center) of the air outlet. Check the gap between the front panel and the back body. If you operate the air conditioner in cooling or dry operation without pushing the 3 places, the surface of the front panel may be covered with frost and have dewdrops. 	(2) 4-screws
2	Electrical part assembly	 Remove the front panel with the procedure ①. Remove the screw fixing the electrical part box. Remove the drain guide. Remove the connector (5P) for the fan motor and the connector (6P) for the louver motor from the microcomputer assembly. Remove the screw for the earth, and pull the electrical part base toward you to remove it from the main unit. Pull out the TC sensor from the sensor holder. Drain guide 	(3) Drain guide (5) screws 5P 6P (2) screws (6) TC sensor When assembling the electrical parts assembly, make the connecting cable U-shaped and put it in the drain pan.

No.	Part name	Procedures	Remarks
3	Horizontal grille	Remove center 2 shafts of the horizontal grille from the back body. Remove left shaft of the horizontal grille from the back body. Remove the horizontal grille from the back body.	(1) Center shafts (2) Left shafts
4	Heat exchanger	 Remove the front panel, electrical parts assembly and the horizontal grille with procedure ② and ③. Remove the screw on the rear side of the main unit to remove the pipe holder. Remove 2 screws fixing the heat exchanger and the bearing base. Remove 2 screws fixing the heat exchanger fixtures (upper and lower) and the back body then pull out the upper side of the heat exchanger slowly. 	Pipe holder (3) 2 screws Bearing base (4) 2 screws
\$	Cross flow fan	1) Remove the front panel, electrical parts assembly, horizontal grille and the heat exchanger with procedure 4. 2) Loosen the set screw of the cross flow fan. 3) Remove 2 screws fixing the bearing base and the back body. 4) Pull the cross flow fan toward you.	(2) Set screw When assembling the cross flow fan, fix it with the set screw at the position where the gap between the back body and the right surface of the cross flow fan is 8 mm.
6	Bearing base	 Remove the front panel, electrical parts assembly, horizontal grille, heat exchanger and the cross flow fan with procedure ⑤. Remove the bearing from the bearing base. If the housing protrudes from the base bearing, put the housing in position and assemble the bearing to the bearing base. 	Bearing base Bearing
•	Fan motor	1) Remove the front panel, electrical parts assembly, horizontal grille, and the heat exchanger with procedure ④. 2) Loosen the set screw of the cross flow fan. 3) Remove 2 screws of the motor fixture. 4) Remove the lower side of the body (R) and move it right to remove it. 5) Remove the motor from the motor fixture.	(3) 2 screws (4) BODY (R) Motor fixture

10-2. Outdoor Unit (RAS-24NA-E, RAS-24N2AX)

No.	Part name	Procedures	Remarks
•	Common procedure	 Stop the operation of the air conditioner and turn off its main power supply or remove the power supply cord. Remove the packed valve cover and the electrical parts cover (2 screws Ø 4 x 10L) Remove 2 cord clamps (4 screws Ø4 x 16L) and disconnect the power supply cord and connecting cable after removing 6 screwson on the terminal block and 1 ground screw on the electrical parts base. Remove the top cabinet. (7 screws Ø 4 x 10L) (Pulling out upward) Remove the top cabinet. (2 screws Ø 4 x 10L) (Pull the front right portion toward you, and remove it pulling out upward) 	Front cabinet Top cabinet Side cabinet Packed valve cover
