## 8" Submersible Electric Pumps

**6Z855  
6Z875  
6Z895  
6Z8125  
Series**

### MARKET SECTORS

AGRICULTURAL, INDUSTRIAL.

### APPLICATIONS

- Water supply from deep wells.
- Pressure boosting and water distribution in civil and industrial systems.
- Supply of surge tanks and reservoirs.
- Firefighting and washing systems.
- Water level control.
- Irrigation.
- Mining.

### SPECIFICATIONS

#### PUMP

- **Delivery:** up to 210 m<sup>3</sup>/h.
- **Head:** up to 550 m.
- Maximum pump overall diameter (2 cable covers included): 198 mm. for all versions.
- Maximum electric pump immersion depth:  
250 m with L6C motors,  
40 m with MC8 and MC10 motors,  
standard configuration (with lip seal);  
version with mechanical seal  
available on request (max. immersion  
depth 350 m).
- Maximum permissible quantity of  
suspended sand: 100 g/m<sup>3</sup>.
- Standard delivery outlet:  
Rp 5" for all versions.
- Motor power: from 5,5 to 150 kW.

#### MOTOR

- L6C motor: three-phase water-filled asynchronous motors with hermetically sealed stator.
- MC8, and MC10 rewindable three-phase asynchronous motors with water-bath windings.
- Three-phase version:  
L6C:  
from 4 to 37 kW 230, 380 V 60 Hz.  
MC8:  
from 30 to 92 kW 380, 460 V 60 Hz.  
MC10:  
from 92 to 150 kW 380, 460 V 60 Hz.
- Maximum supply voltage variations:  
L6C +5% -10%.  
MC8, MC10 +6% -10%.
- PVC windings for MC8 and MC10 motors.
- Horizontal operation:  
L6C up to 37 kW provided that the associated pump can apply an axial thrust of at least 250 N on the entire operating field.

MC8 and MC10 available on request for all versions.

- Maximum number of starts per hour: 25 (L6C), 15 (MC8) and 10 (MC10).
- Maximum temperature of water in contact with motor: 35°C (L6C), 25°C (MC8 and MC10).

### CONSTRUCTIONS FEATURES

#### PUMP

- Robust and lightweight, easy to maintain and corrosion resistant in non-aggressive environments.
  - **Impellers and diffusers** made of **stainless steel**.
  - **Delivery casing** made of **stainless steel**.
  - **Non-return valve** made of **stainless steel, with integrated spring**.
  - **Suction support** made of **stainless steel**.
  - **Shaft made of stainless steel**.
- The guide bearings and wear rings ensure high resistance to wear and guarantee the **constant and long-lasting performance of the hydraulic characteristics**.
- Coupling and flange mounting dimensions meet **NEMA** standards.
- 6ZR8 version in **DUPLEX stainless steel** is also available.

### OPTIONAL FEATURES

#### MOTOR

- Different voltages and frequencies.
- High temperature versions.
- MC8 and MC10 for horizontal installation.

### ACCESSORIES

- Coupling flange.
- Panels.
- Cables.

6z855-2p60-en\_a\_td

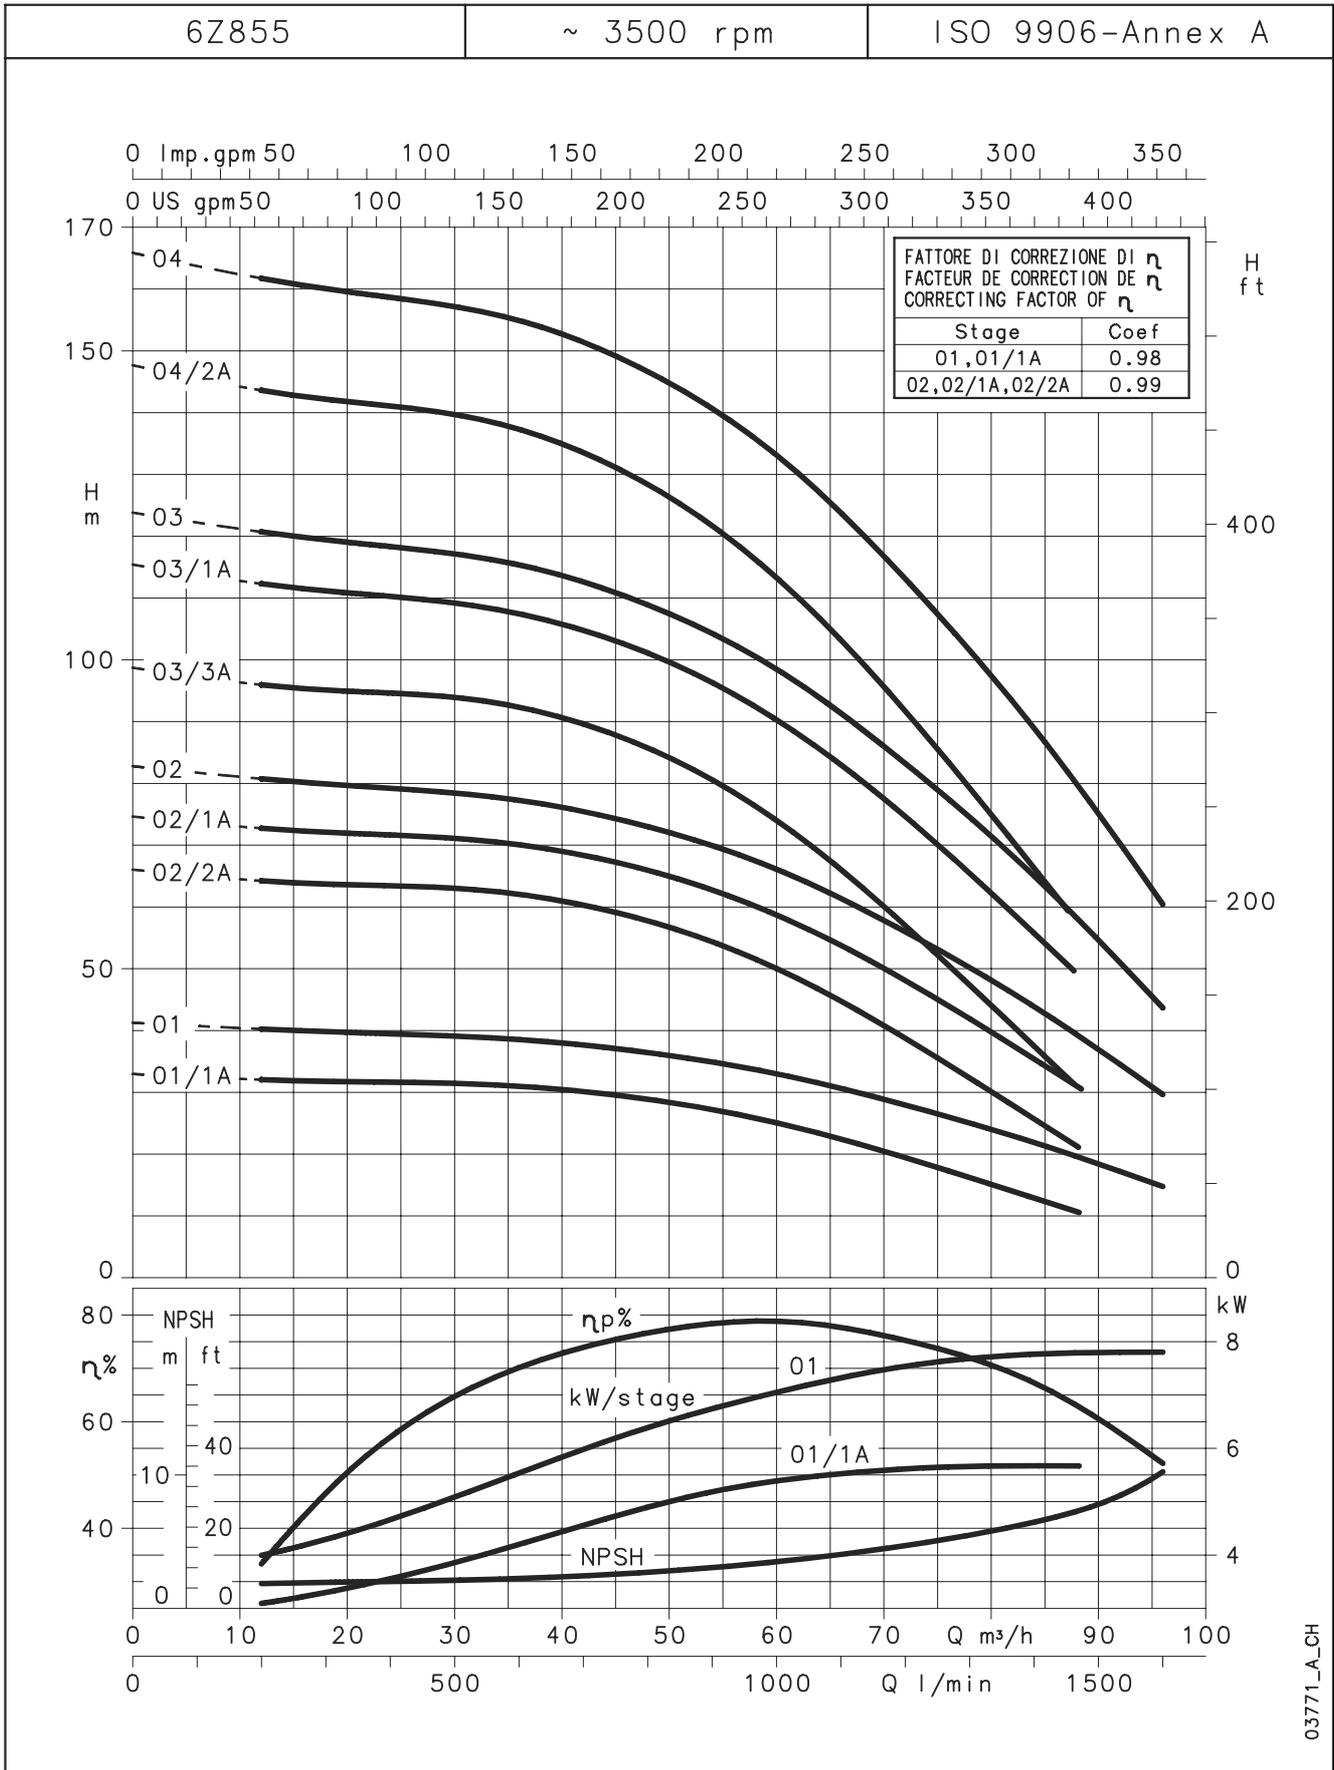

- 1) Max electric-pump diameter with 2 motor cables included.  
In case of 1 motor cable C = 198 mm with L6C motor.
- 2) T min valid only for max. flow speed of 4,2 m/s.  
For higher speeds, please contact our sales network.
- 3) Without cables.
- 4) For pumps without non-return valve, reduce dimension A by 110 mm, and reduce weight by 4 Kg.

## 6" Submersible motors

Submersible liquid-cooled motors. The choice of component materials ensures optimum operating performances, superior quality, reliability and ease of installation.

### L6C Series 60 Hz

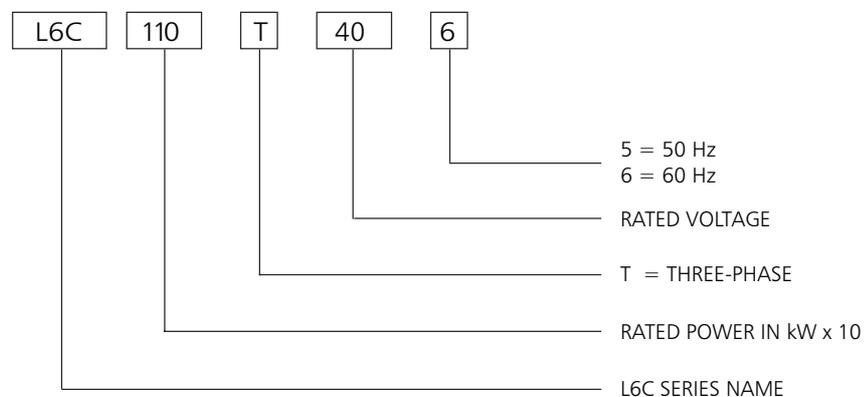

#### SPECIFICATIONS

- **Stainless steel** outer sleeve.
- Shaft extension and coupling dimensions to **NEMA** standards.
- Class **F insulation**.
- Protection class: **IP68**.
- Compensating bellows for internal liquid expansion.
- Axial load supported by Kingsbury type thrust bearing.
- **Mechanical seal** protected by sand guard.
- Maximum **immersion depth**: 250 m.
- Maximum **number of start per hour** at regular intervals: 25 for direct start.
- Maximum supply **voltage variations** allowed:  $\pm 10\%$ .
- Maximum water **temperature**: 35°C.  
Max. temperature applies to motors working in an installation capable of delivering a flow of water around the motor jacket of at least 0,2 m/s.
- **Axial thrust**:  
16000 N from 4 to 22 kW;  
27000 N from 30 to 37 kW.
- **Extractable supply cable** fitted with watertight connector.
- **Versions**:  
- Three-phase:  
4 to 37 kW 230/380 V, 60 Hz.
- Motors with double cable outlet for star/delta start can be supplied upon request.
- Can also operate in horizontal position, provided that the associated pump can apply an axial thrust of at least 250 N on the entire operating field.
- Screws included.

#### OPTIONAL FEATURES

- Silicon Carbide mechanical seal.
- Special voltages.
- Inverter applications.
- PT100 temperature sensor.

#### IDENTIFICATION CODE

EXAMPLE : L6C110T406

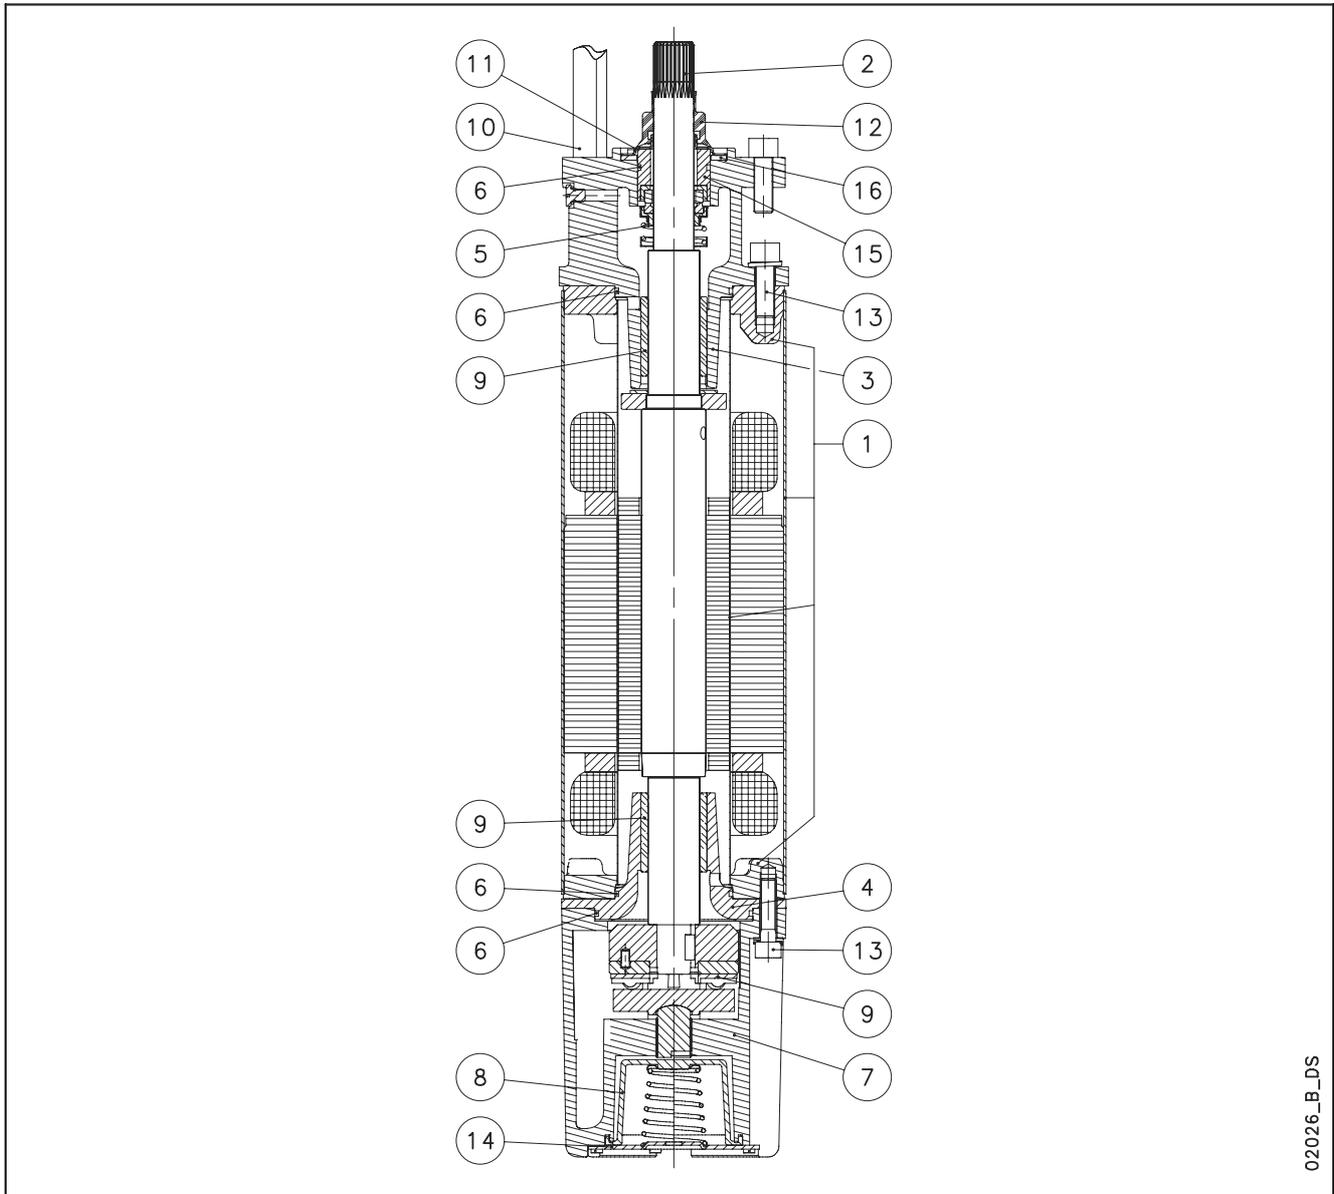

L6C MOTOR :  
RATED POWER 11 kW; THREE-PHASE;  
RATED VOLTAGE 400 V; 60 Hz

**High static torque**

**Power supply cable with extractable connector**

## 8" Submersible motors

### MC8 Series 60 Hz

### APPLICATION

Three-phase asynchronous submersible water filled motor, with short-circuit rotor and special water-resistant windings.

The choice of component materials ensures optimum operating performances, high reliability and ease of installation.

### SPECIFICATIONS

- Shaft extension and coupling dimensions to NEMA standards
- **Rewindable stator** PVC insulation

**Protection class:** IP68

#### Fill liquid

The motors are filled with water containing non-toxic antifreeze (15%). This liquid, besides protecting the motor from low temperatures, helps to inhibit oxidation and improve lubrication.

- **Large compensating diaphragm** for internal liquid expansion. The motor is also equipped with a relief valve enabling the escape of liquid in the event of abnormal temperature increases.
- Axial load supported by oscillating bearing.
- To prevent fluid exchange between the external and internal environments, all the standard motors are equipped with two lip seals. Motors with mechanical seal are available on request.
- Maximum immersion depth:
  - 40 m for standard motors (lip seal)
  - 350 m for motors with mechanical seal (on request).
- Maximum number of evenly distributed starts per hour: 10

- Maximum supply voltage variation: +6%-10%.
- Maximum axial thrust: 50,000 N.
- Available versions:
  - MC8 three-phase: 30 to 92 kW 380, 460 V 60 Hz
  - Different voltages available on request
- PVC winding
- The motors are supplied with three 5-metre lengths of H07BBF-type circular single-core cable.
- Ambient temperature: 25°C; the motors must operate in installations ensuring a minimum water velocity around the motor sleeve of 0.20 m/s.

### OPTIONAL FEATURES

- 4-pole motors.
- Special voltages of up to 1000 V.
- Horizontal installation.
- Inverter applications.
- High temperature windings.
- **Different materials on request.**

### ACCESSORIES

- Panels.
- Drop cables.

## Three-Phase Electric Panel

### APPLICATIONS

- Protection and control of a three-phase submersible electric pump.

## QTD Series

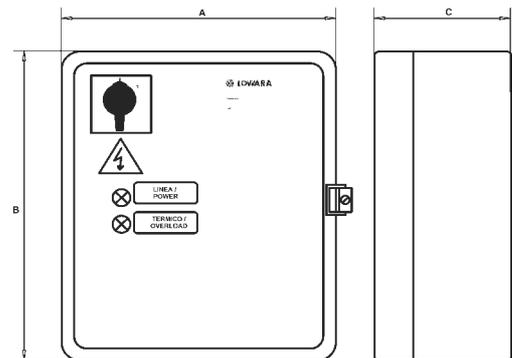

### SPECIFICATIONS

- Control through an external enable contact.
- Supply voltage: 3 x 400 V  $\pm$  10 %.
- Frequency: 50/60 Hz
- Power: 0.37 to 9.2 kW.
- Direct motor start.
- Protection class: IP 54.
- Ambient temperature: -5 to +40 °C (limit specified by EN Standard 60439-1).
- Maximum relative humidity: 50% at +40°C, provided that no condensation occurs (limit specified by EN standard 60439-1).
- Wall mounted.
- Metal enclosure.
- Ready for installation of dry running control float or pressure switch (to be ordered separately).
- Power and thermal overload indicator lights.

### OPTIONAL ACCESSORIES

- VR3 three-phase module for overvoltage protection (lightning protector).
- SLD series 24V level kit. Probe module for protection against dry running (set of three electrodes included in the supply).

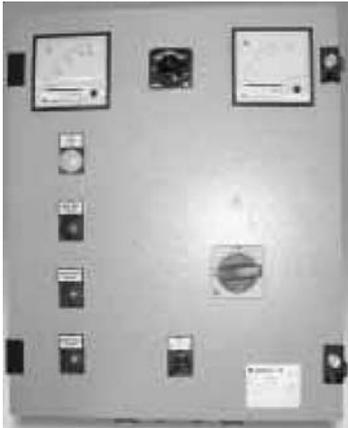

PANEL TYPE	RATED POWER		APPLICATION RANGE A	DIMENSIONS A x B x C mm	WEIGHT WITH PACKING Kg
	kW	HP			
QTD/03	0,37	0,5	0.6-1.0	235x265x150	5,8
QTD/05	0,55	0,75	1.0-1.6		
QTD/11	1,1	1,5	1.6-2.5		
QTD/15	1,5	2	2.5-4.0		
QTD/22	2,2	3	4.0-6.3		
QTD/30	3	4	6.3-10.0		
QTD/40	4	5,5	10.0-12.0		
QTD/55	5,5	7,5	10.0-16.0		
QTD/92	9,2	12,5	16.0-20.0		

Line protection to be provided by the user.

For proper selection, make sure that the ampere input of the electric motor matches the values specified in the table.

## Three-Phase Electric Panel

### Q3D Series

### APPLICATIONS

- Protection and control of a three-phase submersible electric pump.

### SPECIFICATIONS

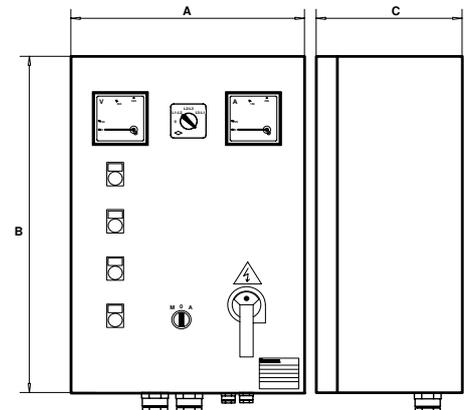

- Manual control through an Auto/Man selector switch.
- Automatic control through an external enable contact.
- Supply voltage: 3 x 400 V  $\pm$  10 %. Frequency: 50/60 Hz.
- 24 V AC low voltage auxiliary circuit.
- Power: 0.37 to 37 kW.
- Direct start.
- Protection class: IP 54.
- Ambient temperature: -5 to +40 °C (limit specified by EN Standard 60439-1).
- Maximum relative humidity: 50% at +40°C, provided that no condensation occurs (limit specified by EN standard 60439-1).
- Wall mounted.
- Metal enclosure.
- Power, pump running, thermal overload and dry running indicator lights.
- Manual-reset thermal relay for overload protection, sensitive to phase failure.
- Ready for installation of dry running

control float or pressure switch (to be ordered separately).

Can be equipped with electronic protection module with electrodes.

### OPTIONAL ACCESSORIES

- SLD series 24V level kit. Probe module for protection against dry running (set of three electrodes included in the supply).
- Float.
- Pressure switch.
- VR3 three-phase module for overvoltage protection (lightning protector).

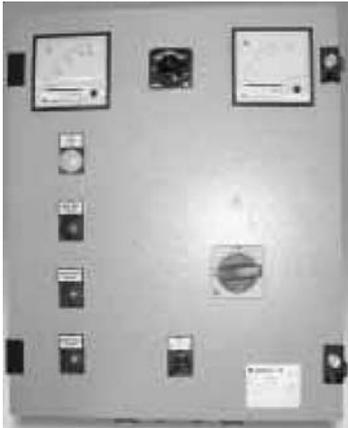

PANEL TYPE	RATED POWER		APPLICATION RANGE A	DIMENSIONS A x B x C mm	WEIGHT WITH PACKING Kg
	kW	HP			
Q3D/03	0,37	0,5	0,9-1,5	300 x 400 x 200	15

Q3D/150	15	20	28,0-38,0		
Q3D/220	22	30	35,0-50,0	400 x 600 x 200	27
Q3D/300	30	40	45,0-63,0		
Q3D/370	37	50	60,0-80,0		

Line protection to be provided by the user.

For proper selection, make sure that the ampere input of the electric motor matches the values specified in the table.

## Three-Phase Electric Panel

### Q3Y Series

### APPLICATIONS

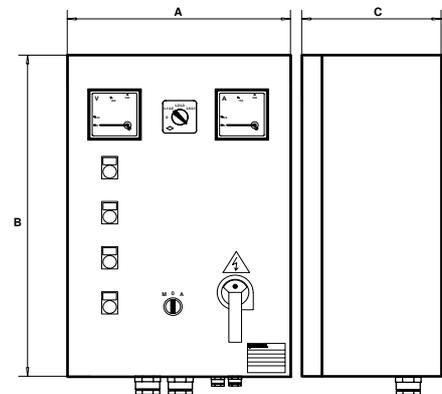

- Protection and control of a three-phase borehole pump.

### SPECIFICATIONS

- Manual control through Auto/Man selector switch.
- Automatic control through an external enable contact.
- Supply voltage: 3 x 400 V  $\pm$  10 %.
- Frequency: 50/60 Hz.
- 24 V AC low voltage auxiliary circuit.
- Power: 4 to 110 kW.
- Star-delta starting.
- Protection class: IP 54.
- Ambient temperature: -5 to +40 °C (limit specified by EN standard 60439-1).
- Maximum relative humidity: 50% at +40°C, provided that no condensation occurs (limit specified by EN standard 60439-1).
- Wall mounted.
- Metal enclosure.
- Power - pump running - thermal overload - dry running indicator lights.
- Manual-reset thermal relay for overload protection, sensitive to phase failure.
- Ready for installation of dry running control float or pressure switch (to be ordered separately).  
Can be fitted with electronic protection module with electrodes.

### OPTIONAL ACCESSORIES

- SLD series 24V level kit.  
Probe module for protection against dry running (set of three electrodes included in the supply).
- Float.
- Pressure switch.
- VR3 three-phase module for overvoltage protection (lightning protector).

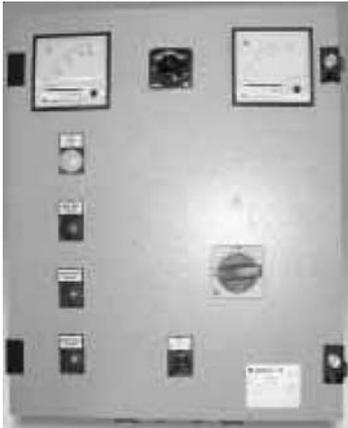

PANEL TYPE	RATED POWER		APPLICATION RANGE A	DIMENSIONS A x B x C mm	WEIGHT WITH PACKING kg
	kW	HP			
Q3Y/40	4	5,5	8,0-12,0	400 x 600 x 200	23
Q3Y/55	5,5	7,5	11,0-16,0		
Q3Y/92	7,5 - 9,2	10 - 12,5	16,0-24,0

Q3Y/1100	110	150	180,0-250,0	600 x 1500 x 300 floor	

Line protection to be provided by user.

For proper selection, make sure that the ampere input of the electric motor falls within the application range shown in the table.

## Three-Phase Electric Panel

### Q3I Series

### APPLICATIONS

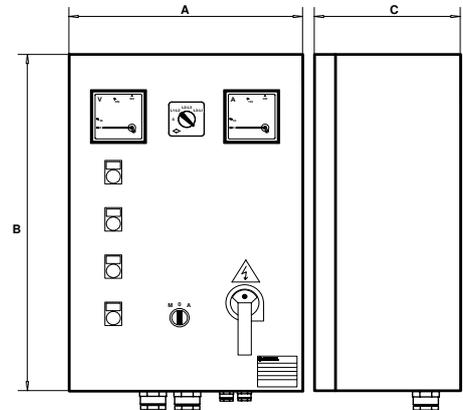

- Protection and control of a three-phase submersible electric pump.

### SPECIFICATIONS

- Manual control through an Auto/Man selector switch.
- Automatic control through external enable contact.
- Supply voltage: 3 x 400 V  $\pm$  10 %.  
Frequency: 50/60 Hz.
- Auxiliary low-voltage circuit: 24 V AC.
- Power: 5.5 to 110 kW.
- Impedance start.
- Protection class: IP 54.
- Ambient temperature: -5 to +40 °C (limit specified by EN Standard 60439-1).
- Maximum relative humidity: 50% at +40°C, provided that no condensation occurs (limit specified by EN standard 60439-1).
- Wall mounted.
- Metal enclosure.
- Power - pump running - thermal overload - dry running indicator lights.
- Manual-reset thermal relay for overload protection, sensitive to phase failure.
- Ready for installation of dry running control float or pressure switch (to be ordered separately).  
Can be equipped with electronic protection module with electrodes.

### OPTIONAL ACCESSORIES

- SLD series 24V level kit.  
Probe module for protection against dry running (set of three electrodes included in the supply).
- Float.
- Pressure switch.
- VR3 three-phase module for overvoltage protection (lightning protector).

For proper selection, make sure that the ampere input of the electric motor matches the values specified in the table.

## Three-Phase Electric Panel

### Q3A Series

### APPLICATIONS

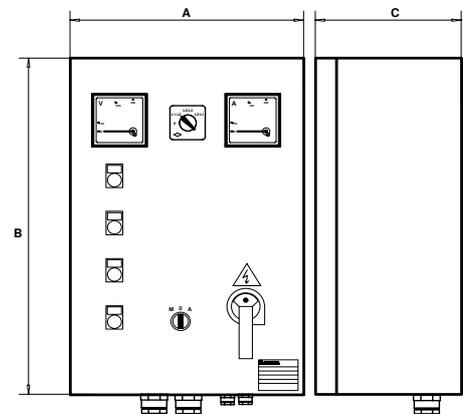

- Protection and control of a three-phase submersible electric pump.

### SPECIFICATIONS

- Manual control through an Auto/Man selector switch.
- Automatic control through an external enable contact.
- Supply voltage: 3 x 400 V  $\pm$  10 %.  
Frequency: 50/60 Hz.
- 24 V AC low voltage auxiliary circuit.
- Power: 5.5 to 110 kW.
- Starting autotransformer
- Protection class: IP 54.
- Ambient temperature: -5 to +40 °C (limit specified by EN Standard 60439-1).
- Maximum relative humidity: 50% at +40°C, provided that no condensation occurs (limit specified by EN standard 60439-1).
- Wall mounted.
- Metal enclosure.
- Power - pump running - thermal overload - dry running indicator lights.
- Manual-reset thermal relay for overload protection, sensitive to phase failure.
- Ready for installation of dry running control float or pressure switch (to be ordered separately).  
Can be equipped with electronic protection module with electrodes.

### OPTIONAL ACCESSORIES

- SLD series 24V level kit.  
Probe module for protection against dry running (set of three electrodes included in the supply).
- Float.
- Pressure switch.
- VR3 three-phase module for overvoltage protection (lightning protector).

For proper selection, make sure that the ampere input of the electric motor matches the values specified in the table.

## Three-Phase Electric Panel

### Q3SF Series

### APPLICATIONS

- Protection and control of a three-phase submersible electric pump.

### SPECIFICATIONS

- Manual control through an Auto/Man selector switch.
- Automatic control through an external enable contact.
- Supply voltage: 3 x 400 V  $\pm$  10 %.
- Frequency: 50/60 Hz.
- 24 V AC low voltage auxiliary circuit.
- Power: 5.5 to 110 kW.
- Softstart with torque control.
- Protection class: IP 54.
- Ambient temperature: -5 to +40 °C (limit specified by EN Standard 60439-1).
- Maximum relative humidity: 50% at +40°C, provided that no condensation occurs (limit specified by EN standard 60439-1).
- Wall mounted.
- Metal enclosure.
- Dry running indicator light.
- Power - pump running - malfunction LEDs on starter keypad.
- ON/OFF selector switch for activation of by-pass contactor.
- Ready for installation of dry running control float or pressure switch (to be ordered separately).  
Can be equipped with electronic protection module with electrodes.

Low-voltage protection on auxiliary circuits.

Protection against starter overtemperature / overload / malfunction.

Protection against overload / locked rotor / current asymmetry on motor side.

Short-circuit protection on inputs and outputs.

RS232 interface for remote control and RS 485 for use of remote keypad.

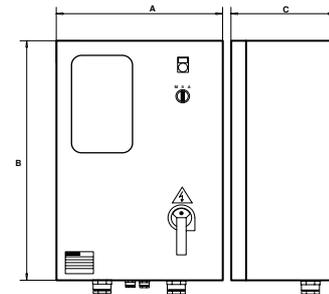

Incorporated by-pass contactor.

### OPTIONAL ACCESSORIES

- SLD series 24V level kit.  
Probe module for protection against dry running (set of three electrodes included in the supply).
- Float.
- Pressure switch.
- VR3 three-phase module for overvoltage protection (lightning protector).

### STATIC STARTER CHARACTERISTICS

- Static starter for gradual start-up/shutdown, featuring: keypad with liquid crystal display showing voltage, absorbed current,  $\cos \varphi$ , operating hours, number of starts, last twenty messages on system status (events / alarms).  
Protections against phase failure / phase sequence / frequency out of limits on power supply line.

PANEL TYPE	RATED POWER		APPLICATION RANGE A	DIMENSIONS A x B x C mm	WEIGHT WITH PACKING kg
	kW	HP			
Q3SF/75	5,5-7,5	7,5-10	8,5-17	400 x 600 x 250	35

Q3SF/750	75	100	120-142		
Q3SF/900	90	122	135-190		
Q3SF/1100	110	150	185-245		

Line protection to be provided by the user.

For proper selection, make sure that the ampere input of the electric motor matches the values specified in the table.

**Level Control Panel**
**QCL5 Series**

**APPLICATIONS**

- Accessory for electric pump control panels, suitable for tank filling or drainage applications or for activation of audible or visual alarms.

**SPECIFICATIONS**

- Automatic control through probes.
- Supply voltage: 1 x 230 V  $\pm$  10% or 1 x 24 V  $\pm$  10%.
- Frequency 50/60 Hz.
- Voltage to probes: 15 V AC at 0.5 mA max.
- Switch contact: 48 V AC at 3 A max (250 W max).
- Autotransformer start.
- Protection class: IP 55.
- Ambient temperature: -5 to +40 °C (limit specified by EN standard 60439-1).
- Maximum relative humidity: 50% at +40°C, provided that no condensation occurs (limit specified by EN standard 60439-1).

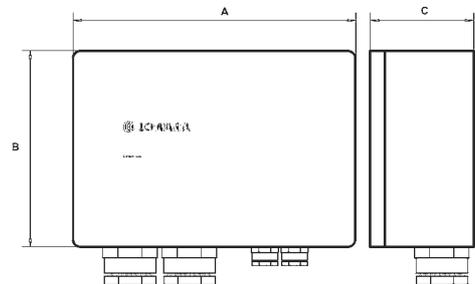

- Wall mounted.
- Electrodes suitable for water at a maximum temperature of 40°C.
- Plastic enclosure.
- Set of three electrodes included in the supply.

**OPTIONAL ACCESSORIES**

- Drop cable with circular cross section.

For connection of the electrodes to the panel we recommend the following cross sections:

LENGHT mt		CABLE CROSS SECTION mm <sup>2</sup>
0	50	0,50
50	100	0,75
100	200	1,00
200	400	2,50
400	oltre	4,00

Three-pole cables can be used for short lengths.

Otherwise we recommend the use of unipolar cables placed at suitable distances from each other to prevent the capacitive effect of the cable from interfering with the proper operation of the electronic module.

PANEL TYPE	VOLTAGE V	OUTPUT CONTACTS	CONTACT CAPACITY	DIMENSIONS A x B x C mm	WEIGHT WITH PACKING kg

QCL5/24	1x24 50/60 Hz				

Line protection to be provided by the user.

**Level  
Probe  
Module**
**SLD Series**
**APPLICATIONS**

- Accessory for electric panels.

**SPECIFICATIONS**

- Electronic module for use of probes as protection against dry running.
- Supply voltage: 1 x 24 V  $\pm$ 10 % for model SLD/24.
- Frequency: 50/60 Hz.
- Absorbed power: 2 VA.
- Voltage to probes: 15 V AC at 0.5 mA max.
- Switch contact: 24 V AC at 5 A max (250 W max).
- Designed for installation on Lowara electric panels featuring DIN bar.
- Electrodes suitable for water at a maximum temperature of 40°C.

**CONSTRUCTION  
CHARACTERISTICS**

- Module made of plastic material with DIN bar attachment
- Cables with quick plug-in connectors.
- Set of three electrodes included in the supply.
- Electrodes with nylon 6 body, stainless steel sensitive element, brass washer and nitrile rubber seal.

**OPTIONAL  
ACCESSORIES**

- Drop cable with circular cross section For connection of the electrodes to the panel we recommend the following cross sections:

LENGHT		CABLE CROSS SECTION
mt		mm <sup>2</sup>
0	50	0,50
50	100	0,75
100	200	1,00
200	400	2,50
400	oltre	4,00

Three-pole cables can be used for short lengths.

Otherwise we recommend the use of single-pole cables placed at suitable distances

from each other to prevent the capacitive effect of the cable from interfering with the proper operation of the electronic module.

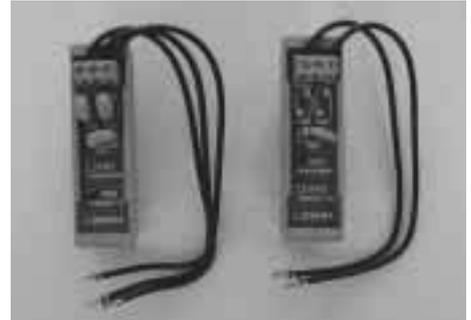

TYPE	VOLTAGE v	CONTACT CAPACITYI	APPLICATIONS	DIMENSIONS A x B x C mm

**Protection  
against  
lightning**
**APPLICATIONS**

- Accessory for electric panels.

**VR SERIES  
SPECIFICATIONS**

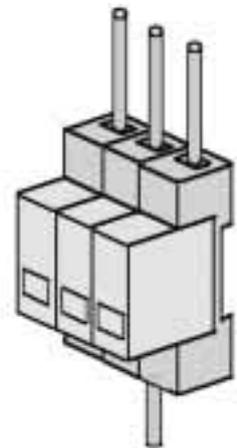

- Lightning arresters for protection of three-phase lines.
- To be connected between the phases and earth conductor.
- Operating voltage: 460 V AC.
- Maximum varistor voltage: 750 V with 100 A peak current.
- Designed for installation on Lowara electric panels featuring DIN bar.

TYPE	VOLTAGE v	APPLICATION
KIT VR3	3 x 400 50/60 Hz	QTD - Q3D

**SCA3 SERIES  
SPECIFICATIONS**

- Lightning arresters for protection of three-phase lines.  
To be connected between the phases and earth conductor.
- Operating voltage: 500 VAC.
- Max varistor voltage: 2.5 kV with 40 kA peak current.
- Designed for assembly on Lowara electric panels featuring DIN bar.

TYPE	VOLTAGE v	APPLICATION
KIT SCA3	3 x 400 50/60 Hz	Q3Y - Q3A - Q3I - Q3SF Q3D

# **TECHNICAL APPENDIX**

## SUBMERSIBLE ELECTRIC PUMP INSTALLATION DIAGRAM

- 1 - Submersible electric pump.
- 2 - Delivery pipe.
- 3 - Drop cable.
- 4 - Control panel.
- 5 - Non-return valve.
- 6 - Gauge.
- 7 - On/off valve.
- 8 - Level sensors for protection against dry running.
- 9 - Cable clamp.
- 10 - Electric pump bleed/priming cap.

A - Distance between the clamps that secure the drop cable to the delivery pipe.

B - Distance from the bottom of the well to the electric pump.

### COMPONENTS REQUIRED FOR CORRECT INSTALLATION

- Control panel equipped with a main switch and thermal relay for overload protection.
- Non-return valve at 10 meters' distance from the delivery ports, plus an additional non-return valve every 30 ÷ 50 meters of piping.
- Gauge and gate valve at well mouth.
- Electronic probes or floats for protection against dry running.

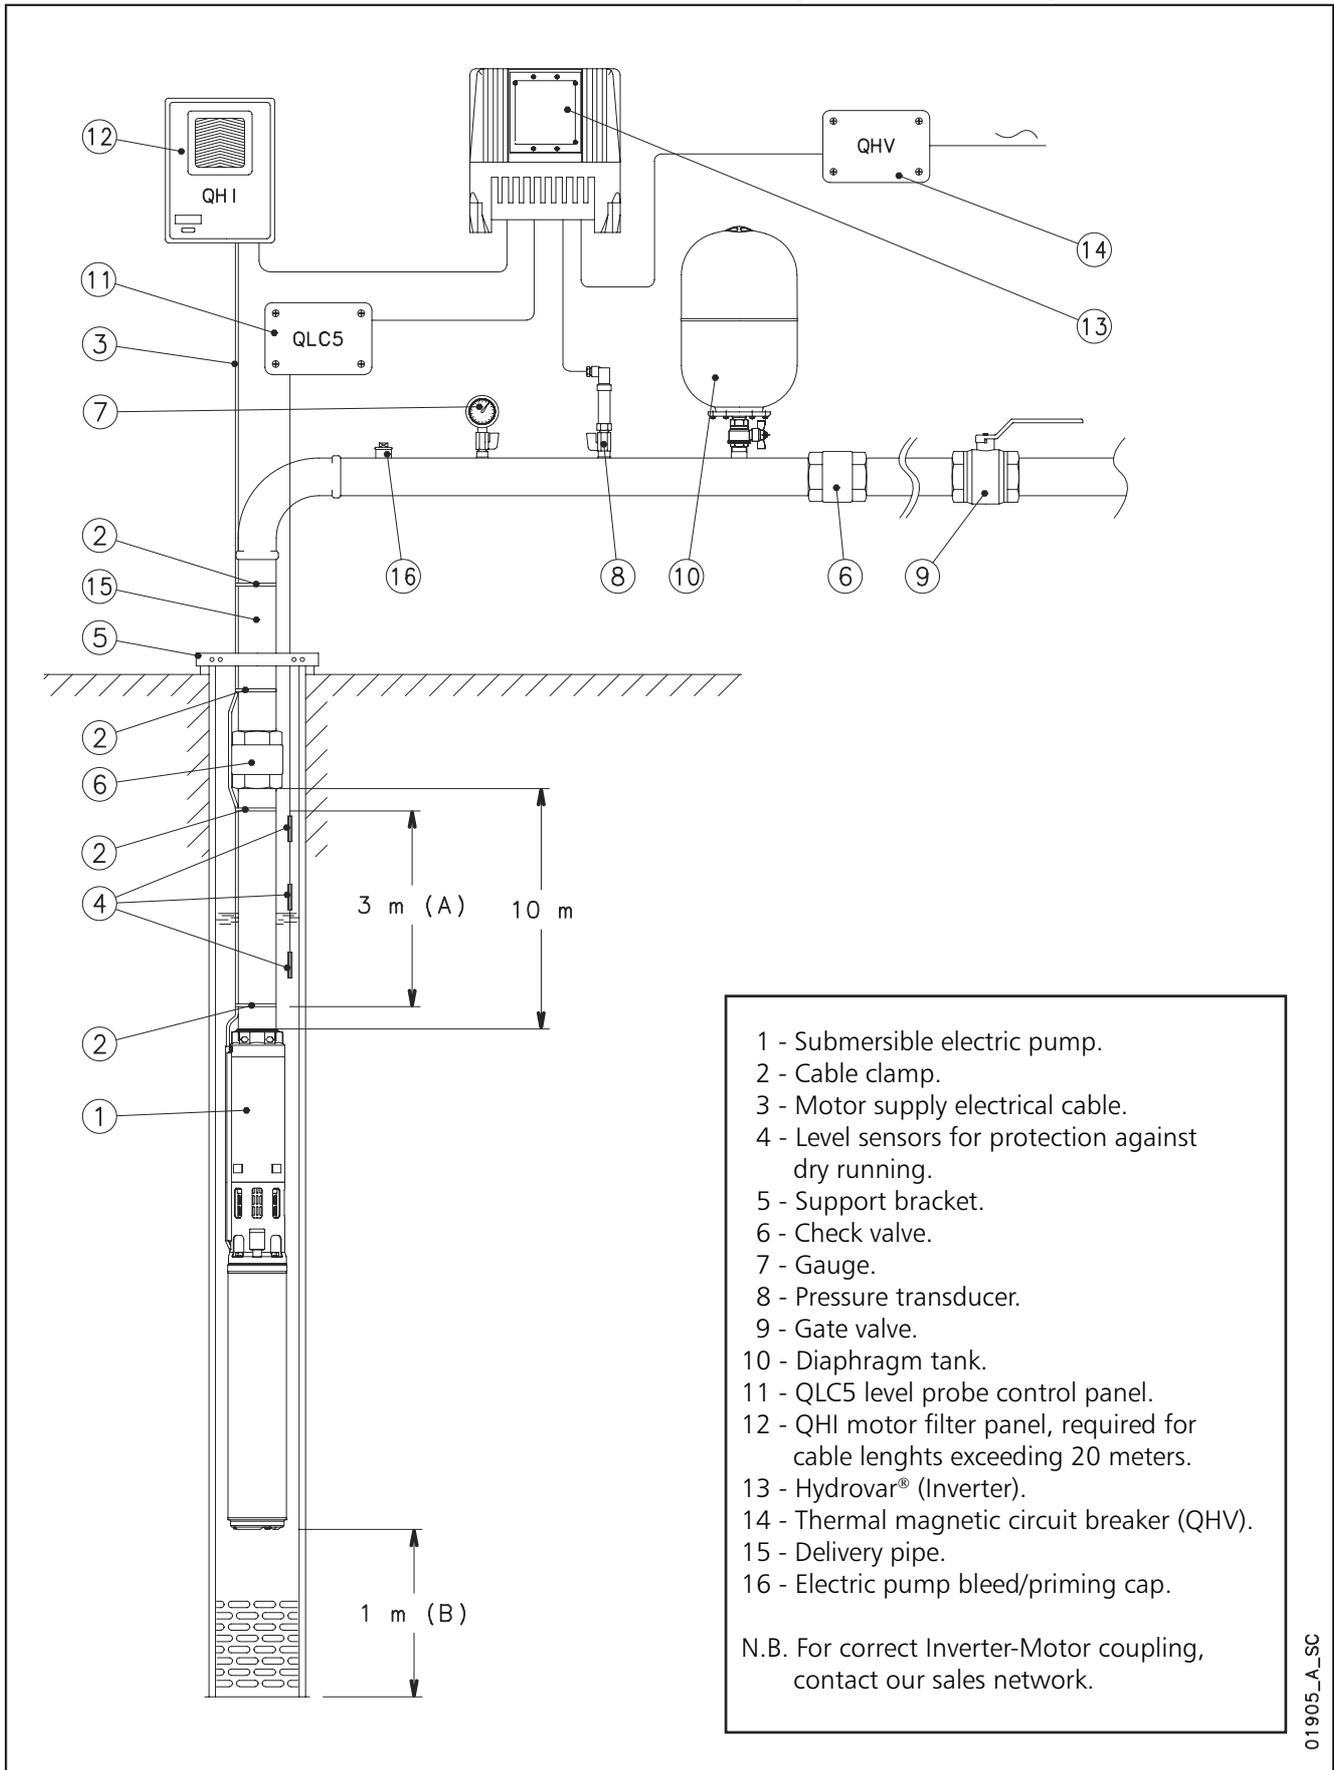

### RECOMMENDATIONS

- Secure the drop cable to the pipe every 3 ÷ 6 meters of piping.
- Make sure the electric pump is installed at a safe distance from the bottom of the well.
- Make sure there is a minimum distance of 3 mm between the diameter of the pump and the internal diameter of the well.
- During operation, make sure that the water circulation speed around the motor is at least 8 cm/sec.
- Make sure that the minimum dynamic level of the water in the well is at least 1 m above the pump's delivery port.

## EXAMPLE OF INSTALLATION OF A SUBMERSIBLE ELECTRIC PUMP CONTROLLED BY AN INVERTER (HYDROVAR®)

01905\_A\_SC

## L6C SERIES MOTORS

TABLE OF POWER REDUCTION COEFFICIENTS WITH INCREASED WATER TEMPERATURE

MOTOR TYPE	RATED POWER kW	TEMPERATURE °C					
		35	40	45	50	55	60
L6C	all models	1	0,95	0,8	0,75	0,7	0,6

L6c-derating-60\_b\_te

**EXAMPLE:**

A 7,5 kW L6C motor is to be used in 45°C water.

Motor power at 50 °C = 7,5 x 0,8 = 6 kW

## MC8 - MC10 - MC12 SERIES MOTORS

TABLE OF POWER REDUCTION COEFFICIENTS WITH INCREASED WATER TEMPERATURE

MOTOR TYPE	RATED POWER kW	TEMPERATURE °C							
		25	30	35	40	45	50	55	60
MC8 (1)	All Models	1	0,85	0,74	-	-	-	-	-
MC8 (2)	All Models	1	1	1	1	1	0,85	0,75	0,67
MC10 (1)	All Models	1	0,85	0,74	-	-	-	-	-
MC10 (2)	All Models	1	1	1	1	1	0,85	0,75	0,67
MC12 (1)	All Models	1	0,85	0,74	-	-	-	-	-
MC12 (2)	All Models	1	1	1	1	1	0,85	0,75	0,67

(1) Standard windings for water temperature up to 35 °C.

MC-derating-60-en\_a\_te

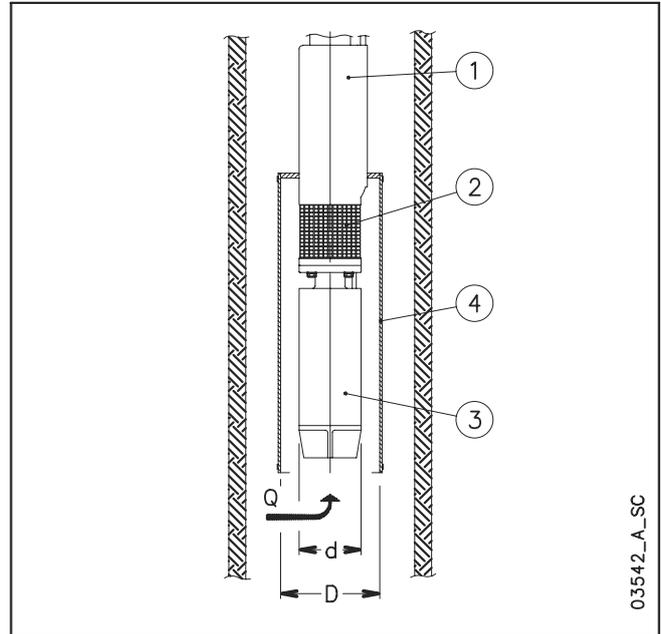

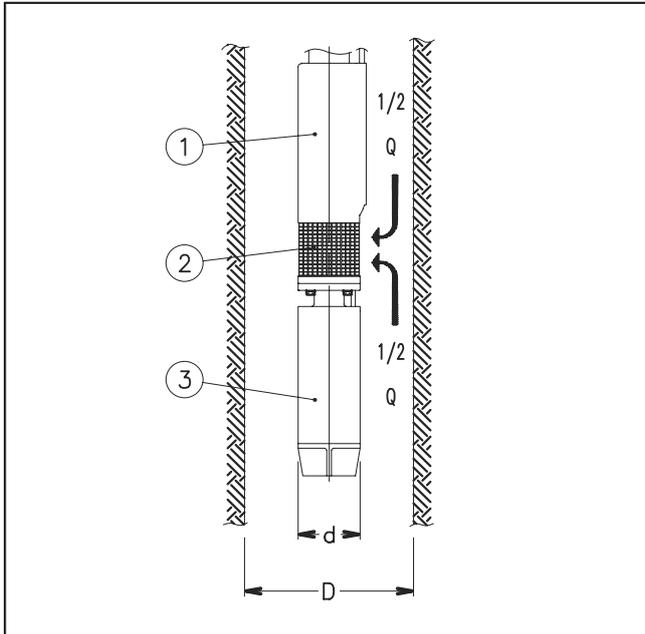

(2) Special windings for water temperature from 35 °C to 60 °C.

**EXAMPLE:**

A MC8-75, 55 kW motor must work in water at a temperature of 35 °C.

Motor power at 35 °C = 55 x 0,74 = 40,7 kW

## CALCULATING THE SPEED OF THE FLUID THAT FLOWS AROUND A SUBMERGED MOTOR AND SIZING OF THE COOLING SLEEVE

03542\_A\_SC

The following formula is used to verify whether the speed of the fluid that flows around the motor of a submersible pump is high enough to guarantee the proper cooling of the motor:

$$v = \frac{\frac{Q}{2}}{\pi \cdot \left( \frac{D^2}{4} - \frac{d^2}{4} \right)}$$

Where: Q in [m<sup>3</sup>/s] is the operating flow rate of the electric pump; only half of this flow is taken into account, because the fluid which is sucked into the area of the filter (2), comes from the motor side (3) as well as from the pump side (1);  
 D in [m] corresponds to the diameter of the well;  
 d in [m] corresponds to the diameter of the motor (3);  
 v in [m/s] is the calculated speed of the fluid that flows around the motor.

Now, compare the speed thus calculated (v) with the minimum speed required for correct cooling of the motor (v<sub>m</sub>): if v ≥ v<sub>m</sub> it means that the motor is properly cooled, if v < v<sub>m</sub> will be necessary to mount a cooling sleeve (4).

### Example:

An electric pump OZ630/12 (motor diameter d = 0.144 m) operates in an 8" (well diameter D = 0.203 m) with flow rate Q = 20 m<sup>3</sup>/h = 0.0055 m<sup>3</sup>/s.

Speed of fluid v = (0.0055/2) / {π·[(0.203)<sup>2</sup>/4 – (0.144)<sup>2</sup>/4]} = 0.17 m/s.

The minimum speed required for proper motor cooling is v<sub>m</sub> = 0.20 m/s.

Because v < v<sub>m</sub>, it will be necessary to mount a cooling sleeve.

The following formula is used to determine the maximum diameter of a cooling sleeve to be mounted on a submersible motor:

$$D = \sqrt{4 \cdot \left( \frac{Q}{v \cdot \pi} + \frac{d^2}{4} \right)}$$

Where: Q in [m<sup>3</sup>/s] is the operating flow rate of the electric pump; the entire flow is taken into account because the fluid comes from the motor side (3) only;  
 D in [m] corresponds to the diameter of the cooling sleeve (4);  
 d in [m] corresponds to the diameter of the motors(3);  
 v<sub>m</sub> in [m/s] is the minimum speed of the fluid that flows around the motor.

If the electric pump operates at different flow rate, the minimum flow rate must be taken into account for calculating the diameter of the cooling sleeve.

### Example:

A motor coupled to the electric pump OZ615/24 (motor diameter d = 0.144 m), which operates with flow rate Q = 15 m<sup>3</sup>/h = 0.0042 m<sup>3</sup>/s, requires a minimum speed of the fluid of v<sub>m</sub> = 0.20 m/s.

Cooling sleeve diameter D = {4·[(0.0042/(0.2·π)+(0.144)<sup>2</sup>/4]}<sup>0.5</sup> = 0.217 m.

## DETERMINING THE CABLE SECTION REQUIRED FOR LOW-VOLTAGE SUBMERSIBLE MOTORS

The section required depends on the maximum admissible load current - which determines the heating factor - on the ambient temperature and how the cable is laid.

Voltage loss, and therefore loss of cable efficiency, constitutes the decisive selection criterium for long cables.

The required cable section is calculated based on the following formulas:

$$\text{Direct start: } q = \frac{\sqrt{3} \cdot I \cdot \cos\phi \cdot 100}{x \cdot \Delta u \cdot U}$$

$$\text{Star - Delta start } q = \frac{2 \cdot I \cdot \cos\phi \cdot 100}{\sqrt{3} \cdot x \cdot \Delta u \cdot U}$$

q... cable section in mm<sup>2</sup>

l... Cable length in mm

I... rated motor current in A

cosφ... Power factor of submersible motor

X... Electrical conductivity (53 for copper)

U... Rated voltage

Δu Voltage drop in %

When sizing the cable section, keep in mind that higher voltage drops mean increased power losses and consequently higher operating costs.

The diagrams show how the required cable section is calculated based on a voltage rating of **400V** and a power factor **cosφ=0,85** and **3% voltage drop**, at an ambient temperature of **30°C**. If the temperature is higher than 30°C, the maximum admissible current carrying capacity of the cable at the actual ambient temperature must be taken into account (see table next to diagrams).

The inductive voltage drop is negligible and has not been taken into account, therefore these diagrams can be adopted **regardless of the frequency**.

The current carrying capacity can be established from the horizontal lines above the length of the cable (vertical lines). The bend point indicates the limit length for 3% voltage drops.

### Examples:

#### 1.) Star-Delta start:

Calculate the cable section  
Rated motor current: 85 A

Waterproof cable  
Length of cable: 35 m

On the horizontal axis, follow the 85 A rated current until you reach a conductivity section with which the length of the cable is greater than or equal to 35m. In this case, 6 mm<sup>2</sup>. The maximum length for a 3% voltage drop is 43 m. Therefore, in this case the voltage drop is  $3 \times 35 / 46 = 2.3\%$

#### 2.) the same data, but with 50°C ambient temperature:

The table next to the diagram shows that the maximum current carrying capacity of a 6 mm<sup>2</sup> cable at 50°C is 78 A, therefore a section of 10 mm<sup>2</sup> must be selected. The maximum length for a 3% voltage drop is 76 m. Therefore, in this case the voltage drop is  $3 \times 35 / 76 = 1.4\%$

#### 3.) the same data, but with 500V voltage:

In order to use the diagrams, the rated current of the motor must be converted in proportion to the voltage:

$$\text{Current reading} = \frac{400V}{\text{rated voltage}} \times \text{rated current}$$

$$\text{Current reading} = \frac{400V}{500V} \times 85 = 68 \text{ A}$$

The maximum length for a 3% voltage drop is 38 m. Therefore, the voltage drop is:  $3 \times 35 / 38 = 2.75\%$

## ASYNCHRONOUS MOTOR STARTING SYSTEMS

### Direct

Suitable for low-power motors.

The starting current ( $I_a$ ) is much higher than the rated current ( $I_n$ ).

Starting current  $I_a = I_n \times 4 - 8$

Starting torque  $C_a = C_n \times 2 - 3$

### Indirect

#### • Star/Delta

The starting current ( $I_a$ ) is three times less than the direct starting current.

Starting current  $I_a = I_n \times 1.3 - 2.7$

Starting torque  $C_a = C_n \times 0.7 - 1$

In the star to delta changeover phase (approx. 70 ms) the motor is not supplied and tends to reduce its rotation speed.

In the case of submersible electric pumps with power above 10 HP, the modest mass of the rotor causes a slowdown at changeover, so that the initial Star supply phase is rendered partially useless.

In such cases we recommend using impedance panels or an autotransformer.

#### • Impedances

The motor is started with a voltage which is lower than the rated one, and which is obtained by means of impedances.

The Lowara panels use impedances which cut down to 70% the starting voltage.

The switch to the rated voltage takes place without any interruptions of the power supply.

Rated voltage  $V_n = 380 \text{ V}$

Starting voltage  $V_a = V_n \times 0,7 = 266 \text{ V}$

$$I_a = I_n \times 4 \div 8 \times \left( \frac{V_a}{V_n} \right) = I_n \times 3 \div 6$$

Starting voltage

Starting torque

$$C_a = C_n \times 2 \div 3 \times \left( \frac{V_a}{V_n} \right)^2 = C_n \times 1 \div 1,5$$

### Autotransformer

The pump is started with a voltage which is lower than the rated one.

The Lowara panels use an autotransformer with a voltage that is 70% the value of the line voltage.

The switch to the rated voltage occurs without any interruptions of the power supply.

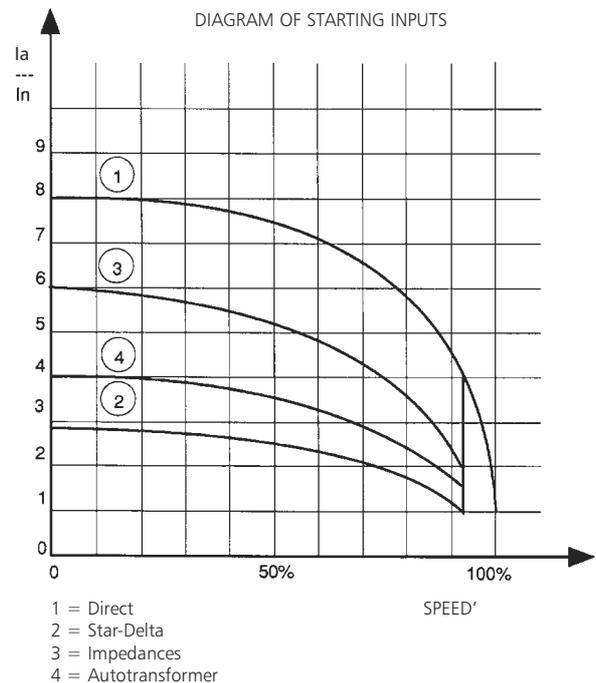

Rated voltage  $V_n = 380 \text{ V}$

Starting current

$$I_a = I_n \times 4 \div 8 \times \left( \frac{V_a}{V_n} \right) = I_n \times 3 \div 6$$

Starting torque

$$C_a = C_n \times 2 \div 3 \times \left( \frac{V_a}{V_n} \right)^2 = C_n \times 1 \div 1,5$$

## WATER REQUIREMENTS IN CIVIL USERS

Determination of the water requirement depends on the type of users and contemporaneity factor. The calculation may be subject to regulations, standards or customs that may vary from country to country. The calculation method shown below is an example based on practical experience, designed to provide a reference value and not a substitute for detailed analytical calculation.

### Water requirements in condominiums

The **consumption table** shows the maximum values for each delivery point, depending on the plumbing amenities.

### MAXIMUM CONSUMPTION FOR EACH DELIVERY POINT

TYPE	CONSUMPTION (l/min)
Sink	9
Dishwasher	10
Washing machine	12
Shower	12
Bathtub	15
Washbasin	6
Bidet	6
Flush tank WC	6
Controlled flushing system WC	90

G-at-cm\_a\_th

The **sum of the water consumption values** of each delivery point determines the maximum theoretical requirement, which must be reduced according to the **contemporaneity coefficient**, because in actual fact the delivery points are never used all together.

$f = \frac{1}{\sqrt{(0,857 \times Nr \times Na)}}$	Coefficient for apartments with one bathroom and flush tank WC
$f = \frac{1}{\sqrt{(0,857 \times Nr \times Na)}}$	Coefficient for apartments with one bathroom and controlled flushing system WC
$f = \frac{1,03}{\sqrt{(0,545 \times Nr \times Na)}}$	Coefficient for apartments with two bathrooms and flush tank WC
$f = \frac{0,8}{\sqrt{(0,727 \times Nr \times Na)}}$	Coefficient for apartments with two bathrooms and controlled flushing system WC
f= coefficient; Nr= number of delivery points; Na= number of apartments	

The **table of water requirements in civil users** shows the maximum contemporaneity flow-rate values based on the **number of apartments** and the type of WC for apartments with one bathroom and two bathrooms. As regards apartments with one bathroom, 7 drawing points have been taken into consideration, while 11 points have been considered for apartments with two bathrooms. If the number of drawing points or apartments is different, use the formulas to **calculate** the requirement.

## TABLE OF WATER REQUIREMENTS IN CIVIL USERS

NUMBER OF APARTMENTS	WITH FLUSH TANK WC		WITH CONTROLLED FLUSHING SYSTEM WC

100	317	395	604	787
120	347	433	662	863
140	375	468	715	932
160	401	500	764	996
180	425	530	811	1056
200	448	559	854	1114

For seaside resorts, a flow rate increased by at least 20% must be considered.

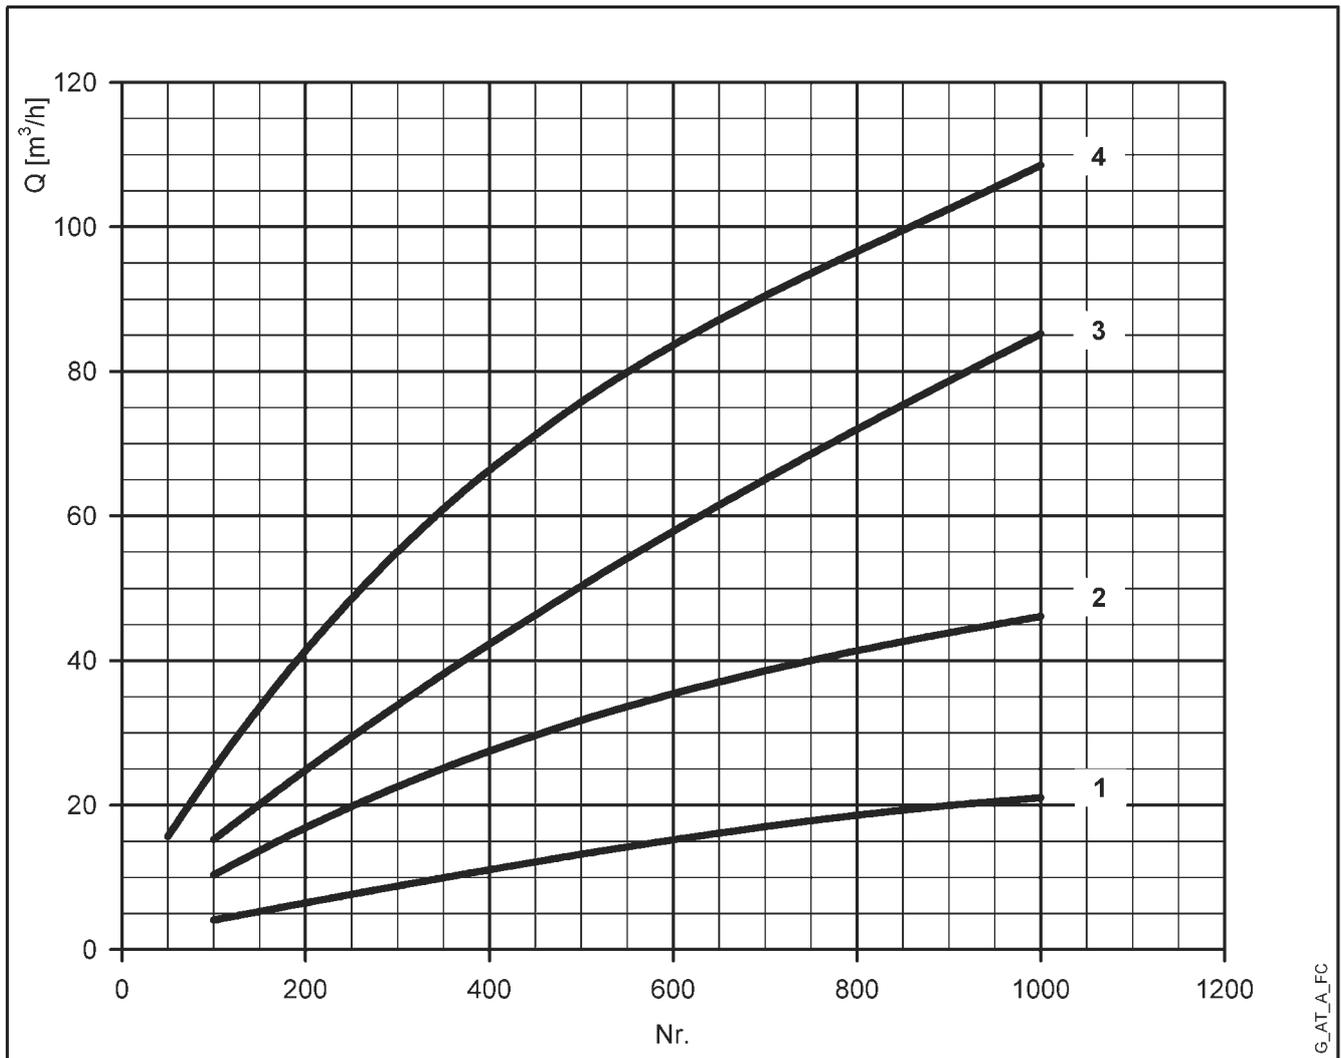

G-at-fi\_a\_th

### WATER REQUIREMENTS FOR COMMUNITY BUILDINGS

The requirements of buildings intended for specific uses, such as **offices, residential units, hotels, department stores, nursing homes** and so on, are different from those of condominiums, and both their global daily water consumption and the maximum contemporaneity flow rate are usually greater. The **diagram of water requirements for community buildings** shows the maximum contemporaneity flow rate of some types of communities, for guidance.

These requirements must be determined case by case with the utmost accuracy, using analytical calculation methods, according to particular needs and local provisions.

For seaside resorts, the flow rate must be increased by at least 20%.

- 1 = Offices (N. of people)
- 2 = Department stores (N. of people)
- 3 = Nursing homes (N. of beds)
- 4 = Hotels, residences (N. of beds)

**NPSH**

The minimum operating values that can be reached at the pump suction end are limited by the onset of cavitation.

Cavitation is the formation of vapour-filled cavities within liquids where the pressure is locally reduced to a critical value, or where the local pressure is equal to, or just below the vapour pressure of the liquid.

The vapour-filled cavities flow with the current and when they reach a higher pressure area the vapour contained in the cavities condenses. The cavities collide, generating pressure waves that are transmitted to the walls. These, being subjected to stress cycles, gradually become deformed and yield due to fatigue. This phenomenon, characterized by a metallic noise produced by the hammering on the pipe walls, is called incipient cavitation.

The damage caused by cavitation may be magnified by electrochemical corrosion and a local rise in temperature due to the plastic deformation of the walls. The materials that offer the highest resistance to heat and corrosion are alloy steels, especially austenitic steel. The conditions that trigger cavitation may be assessed by calculating the total net suction head, referred to in technical literature with the acronym NPSH (Net Positive Suction Head).

The NPSH represents the total energy (expressed in m.) of the liquid measured at suction under conditions of incipient cavitation, excluding the vapour pressure (expressed in m.) that the liquid has at the pump inlet.

To find the static height  $h_z$  at which to install the machine under safe conditions, the following formula must be verified:

$$h_p + h_z \geq (NPSHr + 0.5) + h_f + h_{pv} \quad \textcircled{1}$$

where:

- $h_p$**  is the absolute pressure applied to the free liquid surface in the suction tank, expressed in m. of liquid;  $h_p$  is the quotient between the barometric pressure and the specific weight of the liquid.
- $h_z$**  is the suction lift between the pump axis and the free liquid surface in the suction tank, expressed in m.;  $h_z$  is negative when the liquid level is lower than the pump axis.
- $h_f$**  is the flow resistance in the suction line and its accessories, such as: fittings, foot valve, gate valve, elbows, etc.
- $h_{pv}$**  is the vapour pressure of the liquid at the operating temperature, expressed in m. of liquid.  $h_{pv}$  is the quotient between the  $P_v$  vapour pressure and the liquid's specific weight.
- 0.5** is the safety factor.

The maximum possible suction head for installation depends on the value of the atmospheric pressure (i.e. the elevation above sea level at which the pump is installed) and the temperature of the liquid.

To help the user, with reference to water temperature (4°C) and to the elevation above sea level, the following tables show the drop in hydraulic pressure head in relation to the elevation above sea level, and the suction loss in relation to temperature.

<b>Water temperature (°C)</b>	20	40	60	80	90	110	120
<b>Suction loss (m)</b>	0,2	0,7	2,0	5,0	7,4	15,4	21,5

<b>Elevation above sea level (m)</b>	500	1000	1500	2000	2500	3000
<b>Suction loss (m)</b>	0,55	1,1	1,65	2,2	2,75	3,3

Flow resistance is shown in the tables at pages 69-70 of this catalogue. To reduce it to a minimum, especially in cases of high suction head (over 4-5 m.) or within the operating limits with high flow rates, we recommend using a suction line having a larger diameter than that of the pump's suction port. It is always a good idea to position the pump as close as possible to the liquid to be pumped.

Make the following calculation:

Liquid: water at ~ 15°C  $\gamma = 1 \text{ kg/dm}^3$   
 Flow rate required: 30 m<sup>3</sup>/h  
 Head for required delivery: 43 m.  
 Suction lift: 3.5 m.  
 The selection is an FHE 40-200/75 pump whose NPSH required value is, at 30 m<sup>3</sup>/h, 2.5 m.

For water at 15°C the  $h_{pv}$  term is  $\frac{P_v}{\gamma} = 0,174 \text{ m (0.01701 bar)}$

and  $h_p = \frac{P_a}{\gamma} = 10,33 \text{ m}$

The  $H_f$  flow resistance in the suction line with foot valves is ~1.2 m.

By substituting the parameters in formula  $\textcircled{1}$  with the numeric values above, we have:

$$10,33 + (-3,5) \geq (2,5 + 0,5) + 1,2 + 0,17$$

from which we have: 6.8 > 4.4

The relation is therefore verified.

**FLOW RESISTANCE**
**TABLE OF FLOW RESISTANCE IN BENDS, VALVES AND GATES**

The flow resistance is calculated using the equivalent pipeline length method according to the table below:

ACCESSORY TYPE	DN											
	25	32	40	50	65	80	100	125	150	200	250	300
	Equivalent pipeline length (m)											
45° bend	0,2	0,2	0,4	0,4	0,6	0,6	0,9	1,1	1,5	1,9	2,4	2,8
90° bend	0,4	0,6	0,9	1,1	1,3	1,5	2,1	2,6	3,0	3,9	4,7	5,8
90° smooth bend	0,4	0,4	0,4	0,6	0,9	1,1	1,3	1,7	1,9	2,8	3,4	3,9
Union tee or cross	1,1	1,3	1,7	2,1	2,6	3,2	4,3	5,3	6,4	7,5	10,7	12,8
Gate	-	-	-	0,2	0,2	0,2	0,4	0,4	0,6	0,9	1,1	1,3
Non return valve	1,1	1,5	1,9	2,4	3,0	3,4	4,7	5,9	7,4	9,6	11,8	13,9

G-a-pcv\_a\_th

The table is valid for the Hazen Williams coefficient  $C = 100$  (cast iron pipework). For steel pipework, multiply the values by 1.41. For stainless steel, copper and coated cast iron pipework, multiply the values by 1.85.

When the **equivalent pipeline length** has been determined, the flow resistance is obtained from the table of flow resistance.

The values given are guideline values which are bound to vary slightly according to the model, especially for gate valves and non-return valves, for which it is a good idea to check the values supplied by the manufacturers.
