1 BACnet Gateway---CCM08

Step1: Wiring with Central controller and indoor/outdoor units

Refrigerant System: V3、V4、D3、D4

Refrigerant System: Full V4+

Step2: Wiring with gateway and central controllers

4*Port RS485, each port connect one CCM(indoor or outdoor) and corresponding indoor or outdoor units

Each gateway has a initial IP address, this one is:192.168.208.231,PIs keep it

Take a PC, Connect to gateway

Ex. In this case, CCM08 connect one CCM03 and 8 IDUs

Step3: Modify IP address of PC to connect gateway

Modify the PC ip address to:192.168.208.232, under the same address range with CCM08.

Turn on IE, input 192.168.208.231 in the address bar

Initial user name: admin Initial PW: 12345 After that, the web control interface appeared

In the web control interface, we can control and monitor the A/C

Step4: Connect the gateway to LAN

Firstly, Check the IP address of existed LAN

Next, Change the ip address of CCM08

Change the ip address under the same address range. Pls ask the IT administrator which ip address is available. In this case, ip address of CCM08 have been changed to 10.46.1.2

After modified, Click "Rebot" botton

Connect CCM08 to LAN by Hub

On any PC of LAN, input 10.46.1.2 on IE address bar, get into the web control interface, So CCM08 has been connected to LAN.

Additional: CCM08 cooperate with 3rd network software

Ex. In this case, IP address of PC is 10.46.1.253, ip address of CCM08 is 10.46.1.251. There are 10 IDUs(Network address range: (0054~0063), 1 ODU(Network address: 1800)
