1. SYSTEM INTRODUCTION

1-1 System Introduction

This system is mainly composed by Epistatic Unit (network control system of epistatic unit), KJR-08B wire controller as well as sub-module. Each Epistatic Unit connects with a 485 bus via serial port; mostly 16 set of KJR-08B wire controller could be connected with a bus, while each wire controller could be under connected with mostly 16 sets of Heat Pump Air Chilling module (i.e. mostly 256 sets of Heat Pump Air Chilling module could be connected in this system). The address 0 is the main unit, other address are auxiliary units.

1-1-1 Unit group

Heat Pump Air Chilling Module is divided into three types of serious: with a single main control panel: 30KW(P) and 35KW(P) series; with two main control panels: 60KW(P) and 65KW(P); with four main control panels: 130KW(P) series; with six main control panels: 200KW(P) series; with a single main control panel: 30KW(T), 35KW(T), 60KW(T), 65KW(T) series; with two main control panels: 130KW(T) series; with three main control panels; 130KW(T) series; 130KW(T

Series	30 kW (P)	35 kW (P)	60 kW (P)	65 kW (P)	130 kW (P)	200 kW (P)
The number of main control panels	1	1	2	2	4	6
Series	30 kW (T)	35 kW (T)	60 kW (T)	65 kW (T)	130 kW (T)	200 kW (T)
The number of main control panels	1	1	1	1	2	3

Notice:

(P): For plate type unit

(T): For tube type unit

1-1-2 Hardware composing

Computer, RS485-232 adapter, KJR-08B wire controller, Module unit group.

1-1-3 The connecting method on the switch interfaces of the wire controller KJR-08B and RS485-232:

The X side of the wire controller KJR-08B connect with the "-" side of the wire controller RS485-232; the Y side of the wire controller KJR-08B connect with the "+" side of the wire controller RS485-232; the E side of the wire controller KJR-08B connect with the "" side of the wire controller RS485-232.

System structure as follows illustration:

System diagram

2. SOFTWARE INSTALLATION

1-1 Installation the FireBird database

1) Installation window as Fig. 2-1. Select English as the used language, click "OK" to continue:

Select	Setup Language	×

2) Window as follows shows, select "Install the software automatically (Recommended)", click "Next":

3) System will search the Drive-up programmer automatically, window as follows will show:

4) After find out the Drive-up programmer, the follows window will shows, click "Continue Anyway" key to continue installation:

Hardwar	e Installation
<u>.</u>	The software you are installing for this hardware: MicroDog USB Device has not passed Windows Logo testing to verify its compatibility with Windows XP. (Tell me why this testing is important.) Continuing your installation of this software may impair or destabilize the correct operation of your system either immediately or in the future. Microsoft strongly recommends that you stop this installation now and contact the hardware vendor for software that has passed Windows Logo testing.
	Continue Anyway STOP Installation

5) The follows windows will shows, click "Finish"; then the Softdog Drive-up programmer successfully be installed.

Fig. 2-35

3. THE SOFTWARE INTRODUCTION

- 1. Control operation mode in the refrigeration system.
- 2. Query real-time operating parameter in the main system and subsystem.
- 3. Set up the weekly timing that could realizes the schedule management for the refrigeration system.
- 4. Record refrigeration system error.

4. SOFTWARE APPLICATION

Premise of operating the software: Open the database Firebird 2.0:

1、 Open the "Control Panel".

2、Find out the Firebird 2.0 Server Manger in the "Control Panel", and double-click this icon.

Configure Firebird 2.0 Database Server

3. The button where the red circle shows as Fig. 4-3 is "Start", then click the button and open the database server; if the button is "Stop" (display as Fig. 4-4), then it means that the database server has been opened.

4-1 Software login

1) The LOGIN window as Fig. 4-5.

 User need to input the name and password (default name: Admin, default password: Admin);user's name and password could be changed after login.

3) Select the computer serial port. The system default selection is COM1 (the software will checkout the available serial ports in the computer automatically, and will list them at the Optional Table).

4) When logining, you must insert the Softdog provided by manufacturer to the computer, otherwise, the system cannot be logined and the window as Fig. 4-6,and the Softdog Error would show as follows.

5) Be sure that the softdog has been inserted to USB port all the time while the software is running, otherwise the softdog error dialogs displays like Fig. 4-7.

Error	
8	Softdog detect error, please make sure the softdog has been inserted to USB port and password is correct.
	 Fig. 4-7

6) When provid a wrong USERE'S NAME, the window as Fig.4-8 will be display, while PASSWORD error, the window shows like Fig.4-9.

User's name error!	Password is incorrect, please enter it again!	
ОК	ОК	
Fig. 4-8	Fig. 4-9	

7) In case the password error time exceed 6 times (i.e. the 7th times password error), the window show as Fig.4-10, and then click OK, it will exit the program.

8) In case the selected serial port is unavailable, the window as Fig.4-11 will be display.

KJR Setting			
KJR Address	KJR Name		
		KJR Address	
		KJR Name	
		s	ave
	elete	2	

Detail operation procedure as follows:

a、 Add a wire controller: Select the wire controller address (0-15) at the "KJR Address", fill the wire controller name at "KJR Name" and click "Save".

b. Modify wire controller: Select an existing wire controller (by click the drop down list of the KJR Address at the left Chart or by click the drop down list of the KJR Address at the right), and re-fill the wire controller name and click "Save" to finish the wire controller modification(see Fig. 4-24). KJR Name could not empty or pure blank character string (pure blank charter string is composed by space and tab)

Successful modification
ОК

Fig.4-24

c. Delete wire controller: Select an existing wire controller (as above method), and click "Delete", if there is no outdoor module controlled by any wire controller (see Fig. 4-25), the one could be deleted; if there are outdoor modules controlled by wire controller (see Fig. 4-26), a failed delete message box would pop up (see Fig. 4-27). As long as delete all modules under connect the wire controller, the wire controller could be deleted.

Delete Successfully	Please delete the outdoor module firstly.	Failed delete
OK	OK	ОК
Fig.4-25	Fig.4-26	Fig.4-27

Note: Please select wire controller according to actual system condition.

②Click the "Module parameter setting", a window as Fig. 4-28 will pop up: add module group under connect with the wire controller

📕 Modular paramete	r setting			×
Module name 30KW_1 30KW_2 35KW_1 60KW_1 130KW_1	Module type 3DkW(P) 3DkW(T) 35kW(P) 6DkW(T) 130kW(T)	KJR Address KJR Name	1 VIR01	
		Module hame	Madifu	
	ete		Modify Save	

a、Add module group: Select the existing wire controller address, and click the "New" key to select the module model at the drop-down box (30KW(P)、35KW(P)、60KW(P)、65KW(P)、130KW(P)、200KW(P)、30KW(T)、35KW(T)、60KW(T)、65KW(T)、130KW(T)、200KW(T)), and fill the module name in "Module Name" column, click "Save" key to complete the module group setting. When the numbers of modules under connect the wire controller exceed the maximum numbers of modules under connect a wire controller, then the system will pops-up prompt dialog box display as Fig.4-29

System modules exceed than 16 sub-module units quantity. The module couldn't be added to system!
ОК

Fig.4-29

b. Delete module group: Select the module group which wanted to delete (select the module group in the drop-down list by click the "Module Name" at left), and click "Delete" key, if there are sub-modules connect with the module, a message box would pop up informing you (message box as Fig. 4-30), click "OK" the module together with its sub-module would be deleted.

Delete modu	ile units 🛛 🔀
😲 If d	lelete this module, the sub-module 1 would be deleted together. Are you sure to delete?

Fig.4-30

c、 Modify module group: The added module group's name could be changed. Select the module group which is desired to change name (by click the drop-down list of the "Module Name" at left), and then input the new name in the "Module name" column, click "Modify" key to finish the save the new name (see Fig. 4-31).

③Click "Outdoor module setting", the pop-up window as Fig.4-32——Add outdoor module under connect with the corresponding wire controller.

KJR Address	1 👻	Module name	30KW_1

1856		<	>

a、Add sub-module: Select the existing wire controller address from the "KJR Address", and select the configured module group at the drop-down box of "Module name", select the sub-module address in the drop-down box of the configured "Sub-module address", and then click "Add". The sub-module would not be configured, if the sub-module address without configured in this wire controller; if sub-module is exists, a message box would pop up as Fig. 4-33 to note you, the sub-module cannot configured. If the sub-module quantity exceeds than the maximum module under connect with wire controller, the message box as Fig. 4-34 will pop up.

Fig.4-33

Fig.4-34

b、Delete sub-module: Select the sub-module which wanted to delete (select the wanted delete sub-module at the drop-down box of "Sub-module address"), and click "Delete" to finish this operation.

3) "Schedule management" includes: "Weekly timing setting" and "Error record". See Fig. 4-35

nanagement system

(1) Detail procedures of add a new Weekly Timing Schedule:

a、Select a wire controller: By clicking the "System diagram for weekly timing AC" wire controller icon at the left side in the wire controller, or by selecting the wire controller at the drop-down box of "KJR Address".

b、 Detail parameter for setting weekly timing schedule:

Week: Day (Monday, Tuesday, Wednesday, Thursday, Friday, Saturday, Sunday) Period: Period 1, Period 2, set two Period per day.

Time On: Turn on time, when Time On selecting "---: --", then means do not turn on the unit, display as Fig 4-44.

Time Off: Turn off time, when Time Off selecting "--: --", then means do not turn off the unit , display as Fig 4-45.

Fig 4.45

Timing Status: Drive up the weekly timing function in the current period or not.

Control Mode: Automatically drive-up mode

Mode set: Operation mode: Cooling, Heating, Water Pump

Setting temperature: Setting temperature

Note: The ON/OFF time of the weekly timing can not be at the same time point, the following will be not allowed for example if the ON time was 8:00 of Period1 and the OFF time was 8:00; and the OFF time of Period1 was 10:00 and the ON time of Period2 was 10:00. If there is error and then will pops-up prompt dialog box display as Fig. 4-46:

If no Timing Status has been set, a message box as Fig. 4-47 would pop up.

Please select the timing status
ОК

Fig.4-47

If no Control Mode has been set, a message box as Fig. 4-48 would pop up.

Fig.4-48

If no Mode set has been set, a message box as Fig. 4-49 would pop up.

Fig.4-49

If no Setting temperature has been set, a message box as Fig. 4-50 would pop up.

Fig.4-50

(2) Detail procedures of modify a Weekly Timing Schedule:

a Select a wire controller: By clicking the "System diagram for weekly timing AC" wire controller icon at the left side in the wire controller, or by selecting the wire controller at the drop-down box of "KJR Address".

b、 Select a wire controller: By clicking the Period of the "System diagram for weekly timing AC" at the left side in the wire controller, or by selecting the wanted modified Period at the dropdown box of "Period".

c、 Detail parameter for modifying weekly timing schedule:

Time On: Turn on time, when Time On selecting "---: ---", then means do not turn on the unit, display as Fig 4-51.

Time Off: Turn off time, when Time Off selecting "--: --", then means do not turn off the unit, display as Fig 4-52.

Fig 4-52

Timing Status: Drive up the weekly timing function in the current period or not.

Control Mode: Automatically drive-up mode

Mode set: Heating、Cooling、Water Pump

Setting temperature: Setting temperature

If other parameters have been set, click "Save" key, a message box as the same as above" (1) Detail procedures of add a new Weekly Timing Schedule" will pop up.

Once the setting time is reach, system will set according to the setting parameter, window as Fig. 4-53 will display. When finish the set up, message box will close automatically.

Fig. 4-53

⁽²⁾"Error record"——Save the system operation error record, includes: Record time, Error prevented cord, Sub-module address and KJR address (see Fig. 4-54); click the "Record time" 、 "Protection code"、 "Sub-module address"、 "KJR address"can proceed ordering(see Fig 4-55); "Clear all record" in the Menu (See Fig. 4-56) could be used to delete all error records.

Operation				
	Record time	Protection code	Sub-module address	KJR address

2 About—some relevant software information

4-4 AC system diagram explanation

4-4-1 16 wire controllers at most could be connected to this system, i.e. 16 sets of refrigeration systems. Each wire controller could be connected by the module group of :30KW(P)、35KW(P)、60KW(P)、65KW(P)、130KW(P)、200KW(P)、30KW(T)、35KW(T)、60KW(T)、65KW(T)、130KW(T)、200KW(T) etc.Mostly 16 sets sub-modules could be jointed to a wire controller. (The quantity conversion between module group and sub-module, please refer to Remark 1 in Remark 10. of 4 Software application) see Fig. 4-63 the treeview structure, which could be find

in this software.

Specific operating status could be distinguished by colors of the treeview. See follows table for detail color information:

No.	Color	Status	Equipment
1		OFF-LINE	CONTROLLER (
2		NORMAL	
3		ON-LINE ERROR	

4-4-2 Right-click the blank space of "AC system diagram", then will pops-up the menu display as Fig. 4-64:

🥃 Central air conditioner mana
System Equipment management
AC system diagram
□■□ 后台130 □■□ 后台30 □■□ 后台30 □
Expand All Collapse All

Fig. 4-64

Select the "Expand All" and expand all nodes; select the "Collapse All" and collapse all the nodes.

4-4-3 Right-click a node of "AC system diagram", then will pops-up the menu display as Fig. 4-65:

🗐 Central a	ir conditioner man:		
System Equipment management			
AC system diagram			
	Expand This Collapse This Expand All		
	Collapse All		

Fig. 4-65

Select the "Expand This" and expand the selected node; select the "Collapse This" and collapse the selected node; select the "Expand All" and expand all nodes; select the "Collapse All" and collapse all the nodes.

4-5 Wire controller lock/unlock

Provided that the selected wire controller in unlock status, the key would display "Lock KJR" (see Fig. 4-66), once successful lock the wire controller, the message box (see Fig. 4-67) would display, tells user that the setting is successful, then the key displays "Unlock KJR" (see Fig. 4-68); If the set failed, message box (Fig. 4-69) would display. If without select wire controller, message box as Fig. 4-70 will display.

System in the setting now KJR has been locked!	Lock setting for the KJR	
	System in the setting now KJR has been locked!	
, OK	, OK	

Fig.4-70

Provided that the selected wire controller in lock status, the key would display "Unlock KJR"(see Fig. 4-71), once successful unlock the wire controller, the message box (see Fig. 4-72) would display, then the key displays "Lock KJR"(see Fig. 4-73); If the set failed, message box (Fig. 4-74) would display, tells user that set failed because of timeout.

Fig.4-73

Fig.4-74

4-6 Query system parameter

Click "Query system parameter", system will query the operating status (display the sub-module of 0 address's operation status) and display the operative interface according to the selected wire controller (refrigeration system). In the querying, a message box (see Fig. 4-75) would pop up.

Fig.4-75

If successful query the system, a message box (see Fig. 4-76) will pop up and note you query success, and system parameter interface will update according to the query result. (Fig. 4-77)

Fig.4-76

System Query		
Control mode	Auto

4-10 Remark

Remark 1:

Mostly 16 sets of SUB-MODULES are allow to connect under a WIRE CONTROLLER; MODULE GROUP directly under connects with a WIRE CONTROLLER; SUB-MODULE under connects with MODULE GROUP. The quantity conversion between MODULE and SUB-MODULE: add a 30KW(P) or a 35KW(P) module equal to add one sub-module; add a 60KW(P) or a 65KW(P) module equal to add two sub-modules; add a 130KW(P) module equal to add four sub-modules. I.E. a wire controller is under connected with one 30KW(P) module, one 35KW(P) module, one 60KW(P) module, one 65KW(P) module and two 130KW(P) modules, that is to say 1+1+2+2+4*2=14 sub-modules are under connected with this wire controller, no more 130KW(P) module could be set under to this wire controller, for the reason of 14+4=18, the quantity18 exceeds than the maximum allowance quantity 16, thus, only one 60KW(P) sub-module or one 65KW(P) module, or two 30KW(P) modules or two 35KW(P) modules, or one 30KW(P) module with one 35KW(P) module could be under connected with this wire controller. Anyway, total modules quantity is not allow exceeds than 16.

Series	30 kW (P)	35 kW (P)	60 kW (P)	65 kW (P)	130 kW (P)	200 kW (P)
The number of main control panels	1	1	2	2	4	6
