## 4. Features

### 1. The adoption of anticorrosive-box

The reinforced anticorrosion by using galvanization armor plate and coated with man-composed paint.  
The appearance is stylish and easy for maintenance.  
(Has been passed 1000 hours salt spray test)

### 2. The adoption of credible protection system

#### 2.1 The protection of compressor

High-pressure protection, low-pressure protection, compressor's current protection and so on. The series' protectors can ensure compressor operating normally.

It adopts independent system, except for protection of sequence and wired controller output, any related protection to its corresponding compressor. Once a compressor protection energized, the corresponding compressor will stop, the others working still.

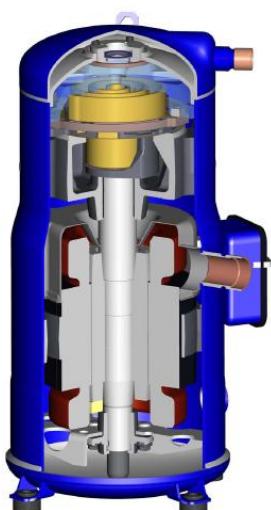

#### 2.2 Fan motor

The fan motors for evaporator have over-heat protection and over-current protection function. The fan motors for condenser have the temperature controller protection function.

### 3. Energy saving design

#### 3.1 High efficiency compressor

Using professional compressor, heat exchanger and optimum connection pipe, the compressor can startup under low power input. Provide maximum reliability, efficiency and quiet operation.

Two refrigerant circuits on larger units (above 12.5ton) provide efficient part load performance.

Standard low and high pressure safety switches.

#### Well compressor control

Compressor staging is controlled directly by the control temperature. When the control temperature is warmer than the cooling set point, cooling is staged up; when the control temperature is cooler than the cooling set point, cooling is staged down. However, a stage change can only occur when the control temperature is outside the dead band. Staging is constrained by an inter-stage delay timer. These constraints protect the compressors from short cycling while eliminating temperature variations near the diffusers.

#### 3.2 Condenser

By using high-efficient thin wing, the condenser has high-efficient heat exchanger, the energy waste decreases greatly.

#### 3.3 Evaporator

By using the high-efficient, super thin wing and inner grooved copper pipe, the evaporators get the higher capacity and the lower noise level.

#### 3.4 The heat insulation of indoor unit

The heat insulation of indoor unit can available decrease heat loss.

#### 3.5 The control and refrigerant cycle system

There are two independent refrigerant cycle systems, the capacity output is adjusted automatically by

different demand, save energy when one control system is in running according to low capacity output.

#### 4. Optional collocation

##### 4.1 Operation in high temperature

The air-conditioner designed for high temperature operating, even when the ambient temperature reaches up to 52°C (125°F) .

##### 4.2 Strong air flow

Large air volume from the air inlet is forced ventilating by the condenser fan.

##### 4.3 Minimum installation arrangement

The installation is fast and low cost with the easy installation and ready operation.

##### 4.4 Pre-drilled duct flange

Flanges are prepared at the supply and return duct connections so that they can reduce duct connection work at site.

##### 4.5 Quiet operation

Noise and vibration have been effectively reduced by adopting new style hermetic compressor. The centrifugal fan and fan casing are optimum shaped for efficient and low noise operation.

#### 5. Cabinet

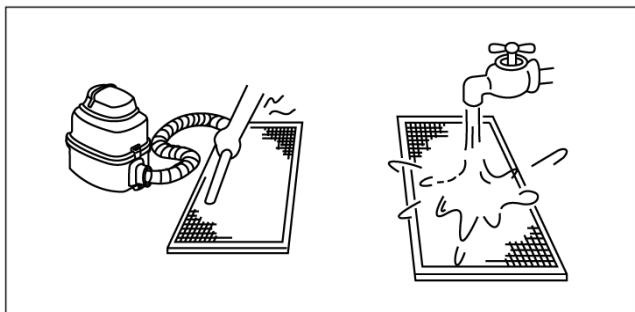

##### 5.1 Sloped drain pan and drain pipe.

##### 5.2 Cabinets have forklift and lifting holes for easy transportation.

##### 5.3 Cabinets have fresh air function, and the filter can be washable.

Fresh air inlet

##### 5.4 External pressure gauge ports.

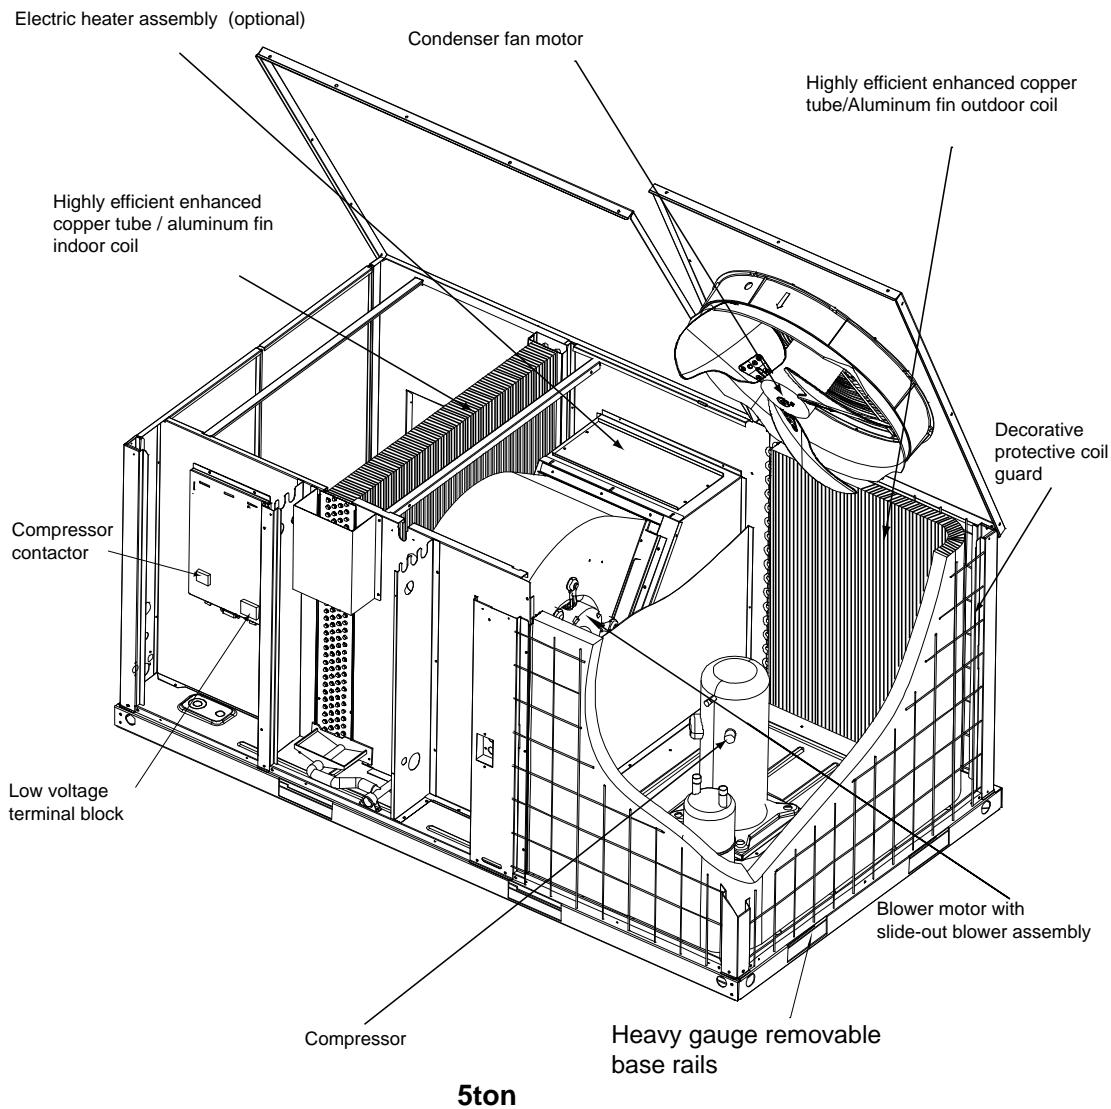

With the gauge ports mounted externally, an accurate diagnostic of system operation can be performed quickly and easily without disrupting airflow.

##### 5.5 Durable construction.

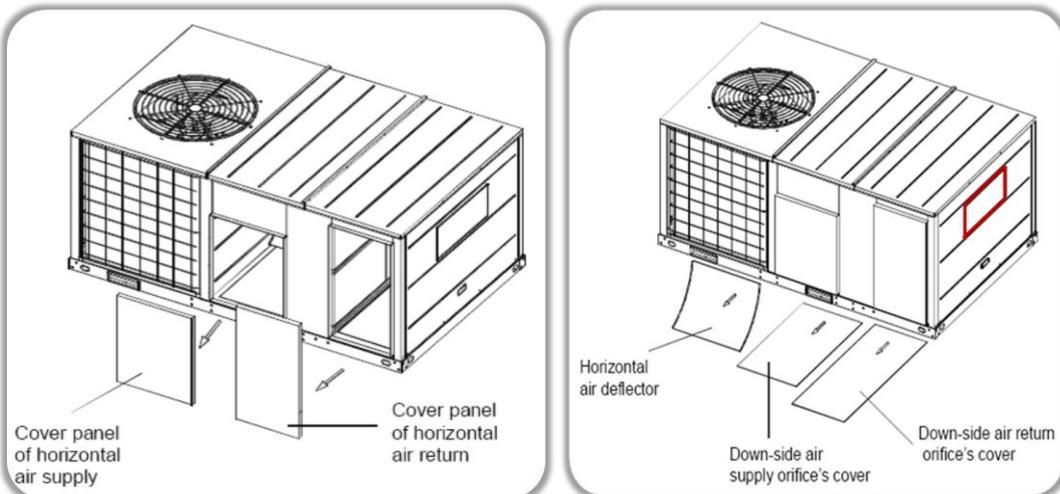

Weather-resistant construction with capped seams and sloped top panels.

G90 galvanized heavy gauge plate conforming to ASTM-A-653, Zinc content of galvanized plate is 275 g/m<sup>2</sup> .

**6. Optional supply/return airflow design, from side or bottom, It could be flexibly applied to multi-position. The rooftop and ground installation are optional.**

## 7. Certificate of compressor

The compressors have CE certified, UL certified.

## 5. List of Functions

### 5.1 Standard specifications

#### A. General

The units are convertible airflow. All units shall be factory assembled, internally wired, fully charged refrigerant and 100% run tested to check cooling and heating operation, fan and blower rotation, and control sequence before leaving the factory. Wiring internal to the unit shall be colored and numbered for simplified identification. The unit is provided with an integral weather resistant control panel.

#### B. Unit enclosure

Panels are of heavy gauge, G-90 galvanized steel sheet with removable access panels, completely weatherized for outdoor installation and properly reinforced and brazed. Panels and access door are provided for inspection and access for all internal parts. Enclosures are provided with adequately reinforced points of support for setting in the unit. Steel sheet panels are zinc-coated and galvanized by the hot dip process of lock forming quality conforming to ASTMA 653 commercial weight G-90, followed by baked on electrostatic polyester dry powder coat paint, on all external panel.

#### C. Compressor

Compressors are scroll for all the models. They are provided with all the standard controls and accessories necessary for safe operation. These are equipped with internal motor protector; factory installed crank case heater and rubber vibration isolator for quiet and efficient operation.

#### D. Air-cooled condensing section

1. The air-cooled condensing section is enclosed within the unit housing and consists of condenser coil, fan(s) electric motor(s) and inherently protected compressor(s). Inner grooved copper tubes with wall thickness of 0.3mm, mechanically bonded to enhanced louvered aluminum fins are standard for all condenser coils. As an option, enhanced coated aluminum fins may be provided. Tube support sheets are galvanized steel, formed to provide structural strength.
2. Fans are propeller type, direct driven, upward discharge and provided with fan grille mounted on the casing.
3. Motors are totally enclosed air-over type with class F insulation. Inherent thermal protection is automatic reset type.

#### E. Evaporator coil section

1. All cooling coils are of enhanced louvered fins and inner grooved copper tubes with wall thickness of 0.3mm, mechanically bonded to aluminum fins. As option, enhanced coated aluminum fins may be provided. Tube support sheets are galvanized steel, formed to provide structural strength.
2. Drainage pan: An insulated drainage pan made of G-90 galvanized steel is provided, for additional corrosion protection.
3. Insulation: Insulation is supplied in adequate density and thickness for all units to prevent condensation from forming on the unit casing. Insulation meets the requirements of NFPA 90A and is protected against deterioration and erosion from air currents.

#### F. Evaporator fan

Evaporator fan is of centrifugal forward-curved blade design capable of handling total required CFM and static pressure in the low and the medium ranges. Casings are made of galvanized steel. Blower motors are of open drip proof type (totally enclosed types are optional) and conform to NEMA MG-1 and MG-2. Blower motor is mounted on adjustable base and secured by locking device. Pillow block bearing are selected for at 200,000 hours average life at design operating conditions. Shaft is turned, ground and

polished from solid steel. Fans and pulleys are keyed to shaft and designed for continuous operation at maximum motor horse power and fan speed. All rotating components and assemblies are statically and dynamically balanced and every unit is vibration tested before shipment from the factory.

### **G. Electronic thermostats**

General information: A dedicated electronic thermostat is supplied with unit controls as standard. This thermostat controls one or two stage heating and cooling applications. The thermostat normally displays room temperature and mode of operation.

The temperature can be set by up/down buttons for both cooling and heating cycles. The thermostat also allows you to select continuous fan operation, or have the fan on intermittent operation with the equipment. It also displays the status of unit, thus providing maximum information for the end user.

### **5.2 Electric auxiliary heater**

Electric auxiliary heaters are the resistance open coil type and conform to the requirements of UL 573 or equivalent. Electrical characteristics, kW capacities and number of stages are as indicated. Airflow switches, fusible links and overheat limit thermostats are provided to shut-off power in case of airflow failure/overheat. Electric heater kit is installed as an externally mounted kit at the supply opening.

### **5.3 Standard features/options/accessories**

Description	Standard features	Options (factory installed)	Accessories (field installed)
Horizontal discharge	◆		
Compressor crankcase heaters	◆		
Evaporator fan-belt driven	◆		
Evaporator fan motor-ODP type(TEFC type optional)	◆		
Condenser fan-direct drive, propeller type(Except 5ton)	◆		
Condenser fan-direct drive, axial type(Only 5ton)	◆		
Condenser fan motor-totally enclosed air-over type	◆		
Electric auxiliary heater		◆	◆
Filter, Nylon(Thickness 10&12.5mm, except 5ton)	◆		
Filter, aluminum(Thickness 25mm)		◆	
Compressor overload protection	◆		
Low &high pressure switch	◆		
Cooling & heating thermostat	◆		
Condenser fan guard	◆		
Condenser coil guard	◆		
Wired controller KJR-12B	◆		
Wired controller KJR-23B			◆
Wired controller KJR-25B			◆
Drainage pipe			◆
Drainage outlet			◆
Snap ring			◆

#### Notes:

1. All capacities are gross and have not considered indoor fan heat. To obtain NET cooling capacity subtract indoor fan heat.
2. TC=Total Capacity. (Unit: 1000Btu/h).
3. SC=Sensible Capacity. (Unit: 1000Btu/h).

## 9.2 Cooling capacity for 6.2Ton:

## 12. Parameter and Pressure Chart for Air Volume

### 12.1 Model:5ton

#### Parameter table for indoor unit air volume:

Static pressure (Pa)	0	25	50	70	75	100	125	150	175	200
Air flow (CFM)	1920	1872	1831	1800	1795	1749	1701	1649	1598	1536
Brake power (kW)	0.7782	0.7634	0.752	0.742	0.7417	0.73	0.716	0.7015	0.687	0.67
Fan speed (rpm)	846	881	914	944	948	975	1006	1036	1067	1096

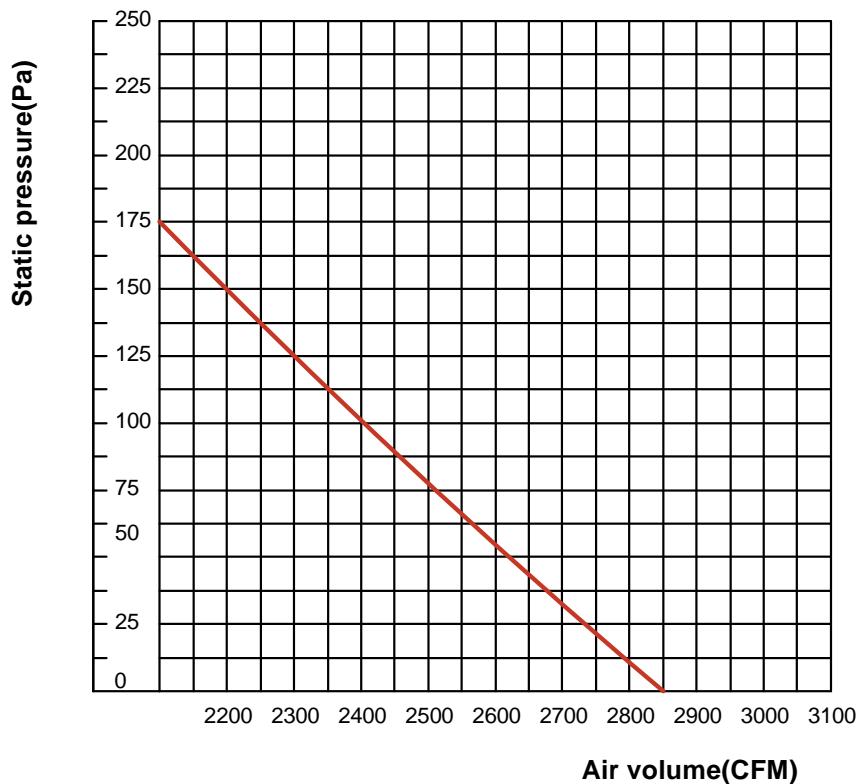

#### Parameter table for outdoor unit air volume:

Model	Static pressure (Pa)	Air flow (CFM)	Brake power (kW)	Fan speed (rpm)
5Ton	0	4114	0.345	1080

## 12.2 Model:6.2ton

### Parameter table for indoor unit air volume:

Static pressure (Pa)	0	25	50	60	75	100	125	150	175
Air flow (CFM)	2853	2754	2632	2602	2522	2413	2310	2236	2108
Brake power (kW)	1.51	1.4	1.36	1.34	1.2	1.14	1.09	1.05	0.98
Fan speed (rpm)	1068	1072	1077	1077	1080	1082	1085	1089	1091

### Parameter table for outdoor unit air volume:

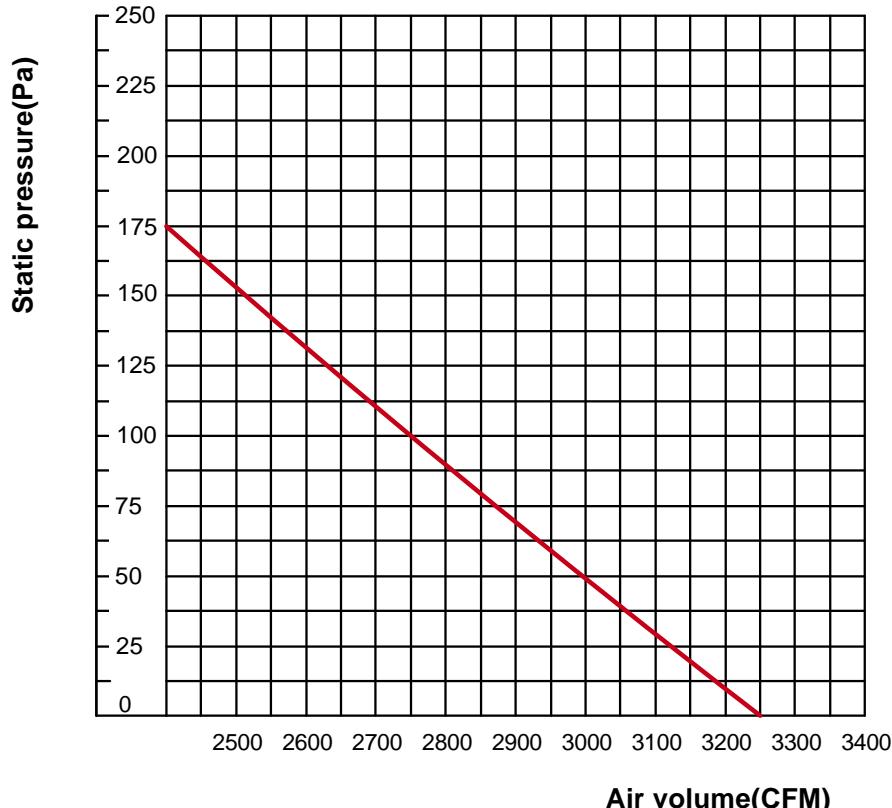

Model	Static pressure (Pa)	Air flow (CFM)	Brake power (kW)	Fan speed (rpm)
6.2Ton	0	5880	0.78	900
	10	5647	0.79	889
	20	5411	0.80	875

### 12.3 Model: 7.5Ton

#### Parameter table for indoor unit air volume:

Static pressure (Pa)	0	20	50	60	75	100	125	150	175
Air flow (CFM)	3240	3149	2996	2941	2886	2782	2664	2540	2411
Brake power (kW)	1.83	1.78	1.70	1.66	1.63	1.58	1.53	1.47	1.41
Fan speed (rpm)	1260	1265	1268	1271	1274	1277	1281	1285	1287

#### Curve diagram of static pressure, air flow volume:

#### Parameter table for outdoor unit air volume:

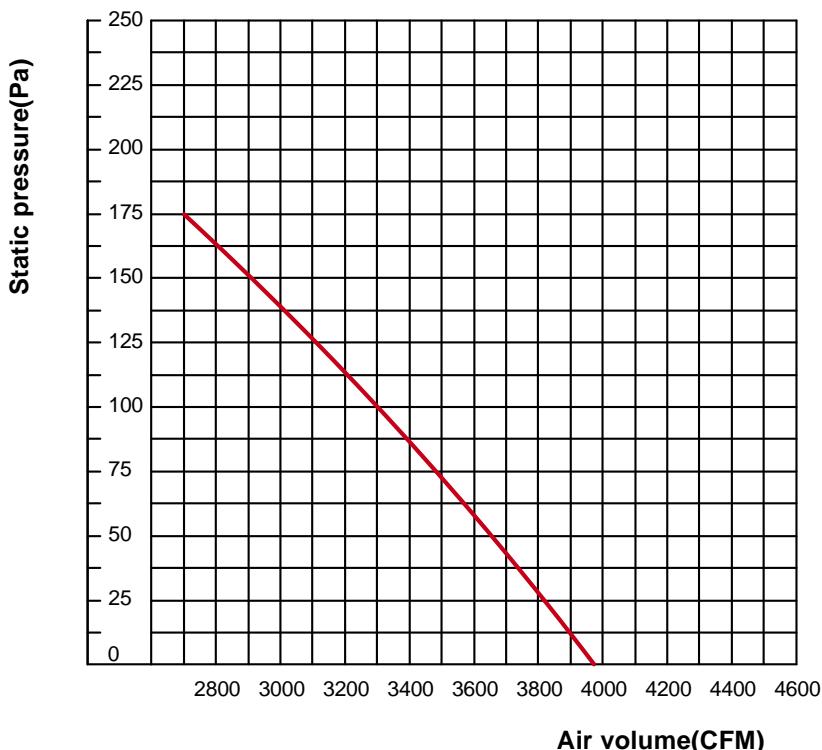

Model	Static pressure (Pa)	Air flow (CFM)	Brake power (kW)	Fan speed (rpm)
7.5Ton	0	5880	0.78	900
	10	5647	0.79	889
	20	5411	0.80	875

## 12.4 Model: 8.5Ton

### Parameter table for indoor unit air volume:

Static pressure (Pa)	0	25	50	75	100	125	150	175
Air flow (CFM)	3940	3785	3612	3451	3302	3130	2955	2759
Brake power (kW)	1.88	1.81	1.73	1.66	1.59	1.51	1.43	1.35
Fan speed (rpm)	933	937	939	944	946	949	952	953

### Curve diagram of static pressure, air flow volume:

### Parameter table for outdoor unit air volume:

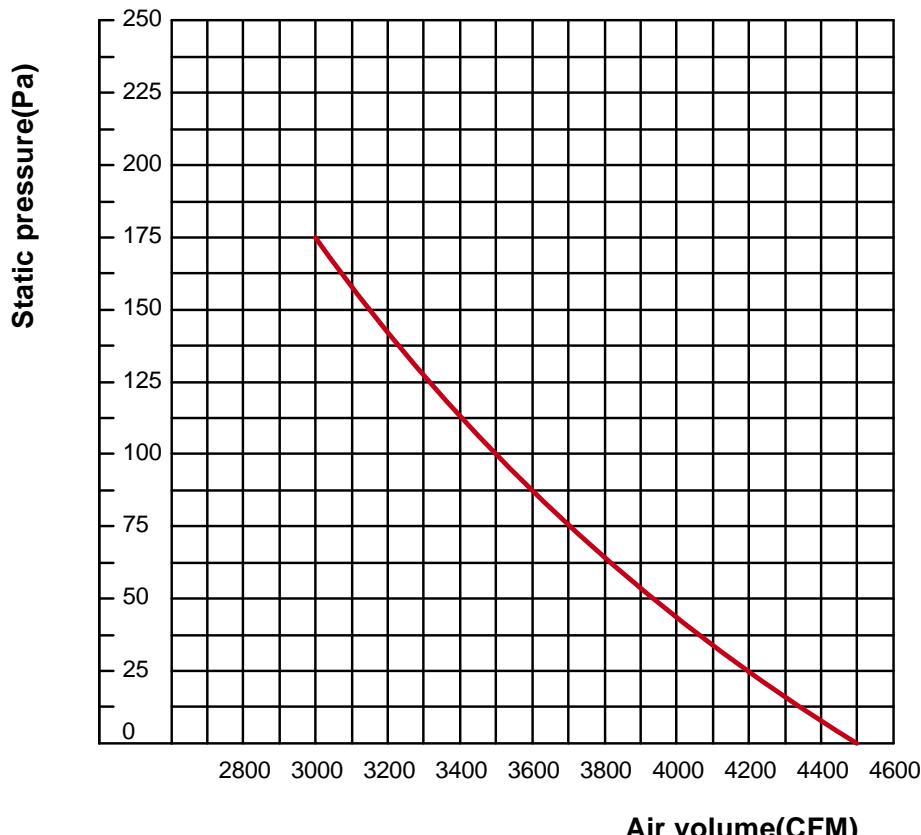

Model	Static pressure (Pa)	Air flow (CFM)	Brake power (kW)	Fan speed (rpm)
8.5Ton	0	7060	0.78	935
	10	6765	0.79	926
	20	6471	0.80	918

## 12.5 Model: 10Ton

### Parameter table for indoor unit air volume:

Static pressure (Pa)	0	25	50	75	100	125	150	175
Air flow (CFM)	4298	4156	3929	3756	3579	3382	3218	3020
Brake power (kW)	2.18	2.1	2.02	1.96	1.86	1.79	1.71	1.62
Fan speed (rpm)	1000	1004	1006	1011	1014	1016	1020	1021

### Curve diagram of static pressure, air flow volume:

### Parameter table for outdoor unit air volume:

Model	Static pressure (Pa)	Air flow (CFM)	Brake power (kW)	Fan speed (rpm)
10Ton	0	7060	0.78	935
	10	6765	0.79	926
	20	6471	0.80	918

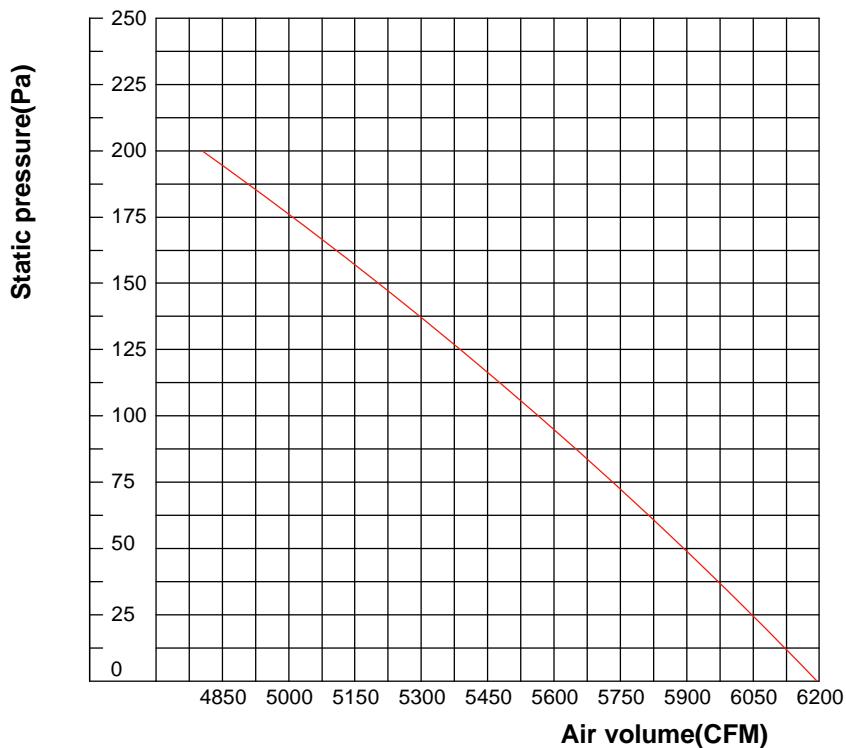

## 12.6 Model: 12.5Ton

### Parameter table for indoor unit air volume:

Static pressure (Pa)	0	25	50	90	125	175	200	225
Air flow (CFM)	6200	6050	5900	5580	5375	5000	4820	4670
Brake power (kW)	3.06	2.95	2.85	2.69	2.56	2.35	2.24	2.14
Fan speed (rpm)	895	894	896	897	898	898	899	899

### Curve diagram of static pressure, air flow volume:

12.5 Tons (50Hz)

### Parameter table for outdoor unit air volume:

Model	Static pressure (Pa)	Air flow (CFM)	Brake power (kW)	Fan speed (rpm)
12.5Ton	0	7060	0.78	935
	10	6765	0.79	926
	20	6471	0.80	918

## 12.6 Model: 15Ton

### Parameter table for indoor unit air volume:

Static pressure (Pa)	0	50	75	90	125	150	200	250
Air flow (CFM)	7209	6675	6575	6400	6150	6044	5639	5227
Brake power (kW)	5.11	4.85	4.71	4.65	4.45	4.32	4.08	3.82
Fan speed (rpm)	1029	1029	1030	1031	1031	1032	1033	1034

### Curve diagram of static pressure, air flow volume:

### Parameter table for outdoor unit air volume:

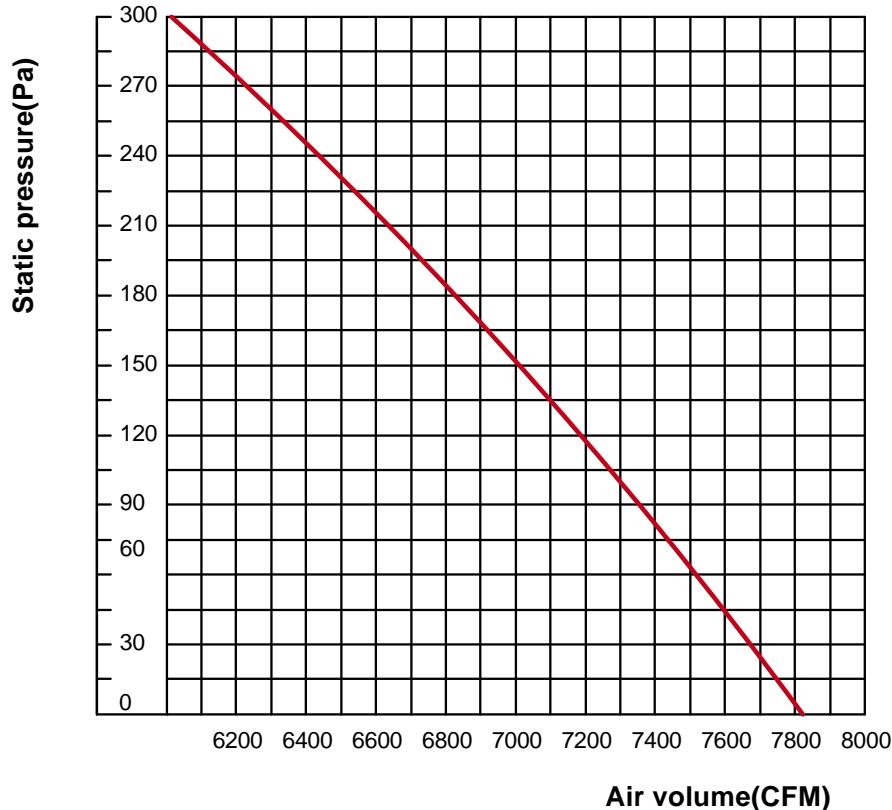

Model	Static pressure (Pa)	Air flow (CFM)	Brake power (kW)	Fan speed (rpm)
15Ton	0	11000	0.78x2	935
	10	9800	0.79x2	926
	20	9600	0.80x2	918

## 12.7 Model: 17.5Ton

### Parameter table for indoor unit air volume:

Static pressure (Pa)	0	25	50	75	100	125	150	175	200	225	250	275	300
Air flow (CFM)	7858	7712	7546	7392	7271	7091	6977	6836	6680	6534	6354	6178	6020

T2: Indoor coil temperature sensor in system

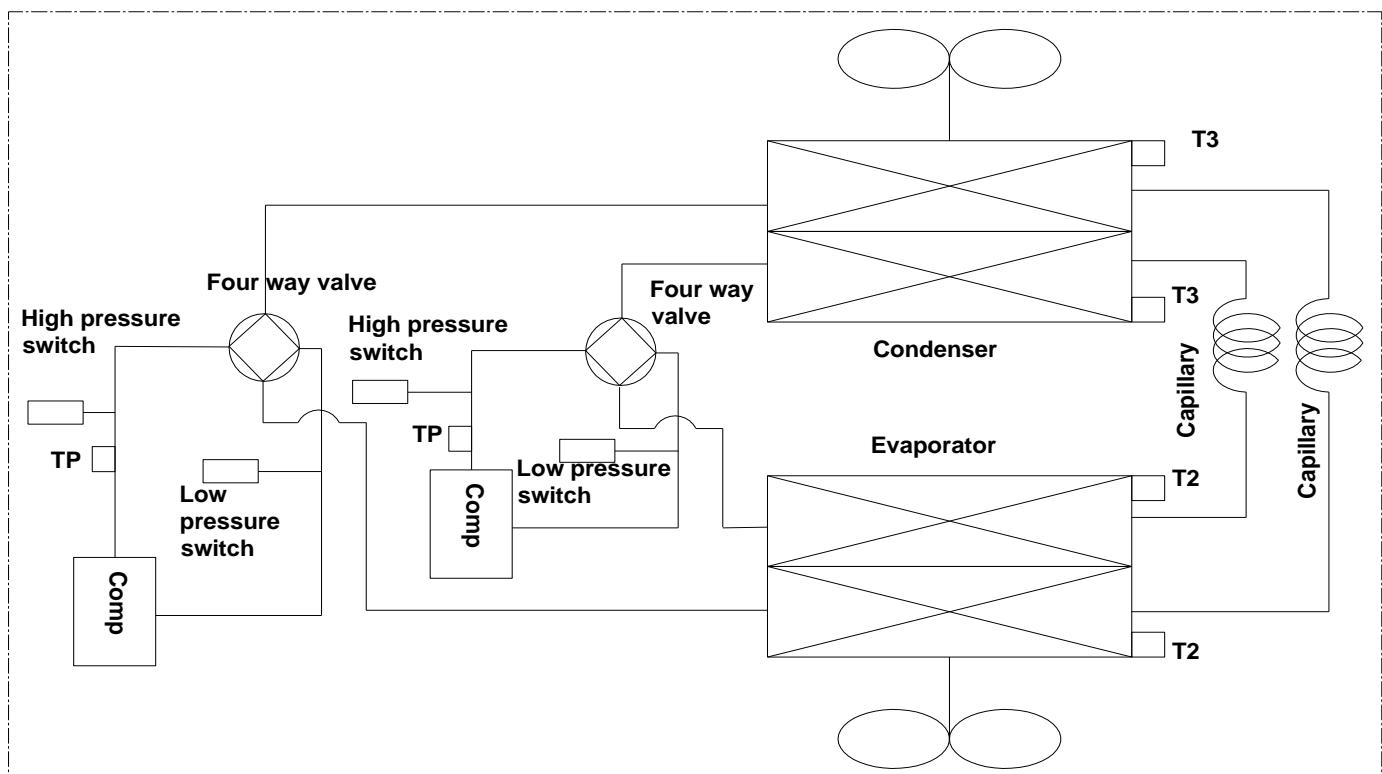

T3: Outdoor coil temperature sensor in system

## 13.2 12.5,15,17.5,20,30 ton:

Cooling, Cooling+EAH type

Cooling and Heating type:

TP: Compressor discharge temperature sensor in system A and B

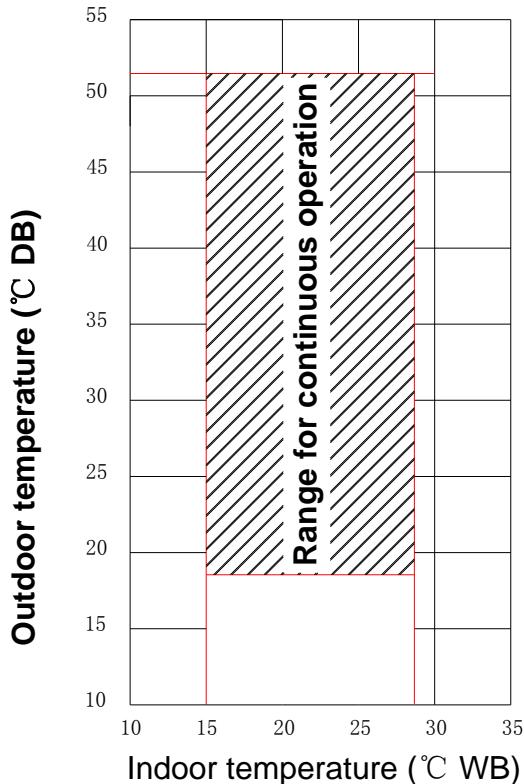

T2: Indoor coil temperature sensor in system A and B

T3: Outdoor coil temperature sensor in system A and B

## 14. Operation Limit

### 14.1 Cooling only and cooling with auxiliary heater

#### Cooling

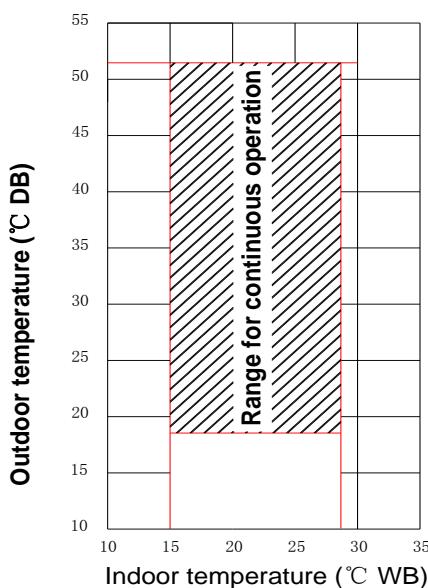

Model	Temperature	Outdoor temperature	Indoor temperature
Cooling mode		18°C ~ 52°C	17°C ~ 30°C
With auxiliary electric heater models		--	17°C ~ 30°C

#### Note:

Room relative humidity less than 80% . If the unit operates in excess of this figure, the surface of the unit may attract condensation.

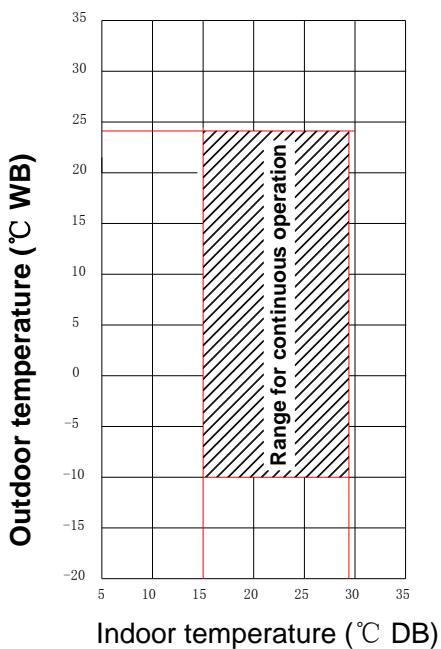

## 14.2 Cooling and heating

### Cooling mode

Mode	Temperature	Outdoor temperature	Indoor temperature
Cooling mode		18°C ~ 52°C	17°C ~ 30°C

### Heating mode

Mode	Temperature	Outdoor temperature	Indoor temperature
Heating mode		-10°C ~ 24°C	17°C ~ 30°C

#### Note:

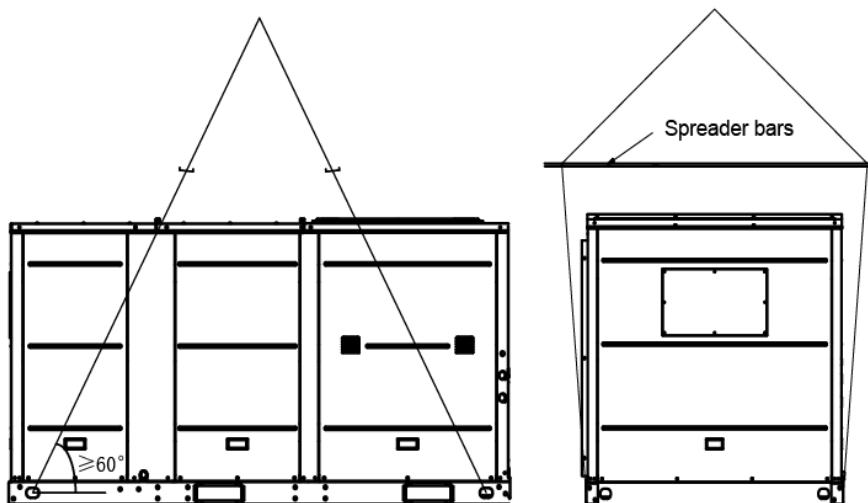

Room relative humidity less than 80% . If the unit operates in excess of this figure, the surface of the unit may attract condensation.

## 15. Installation

### 15.1 Lifting

Rigging cables should have adequate capability to resist 3 times weight of unit. Before lift, please check and ensure that hooks are holding tightly to unit and lifting angles are no less than 60°.

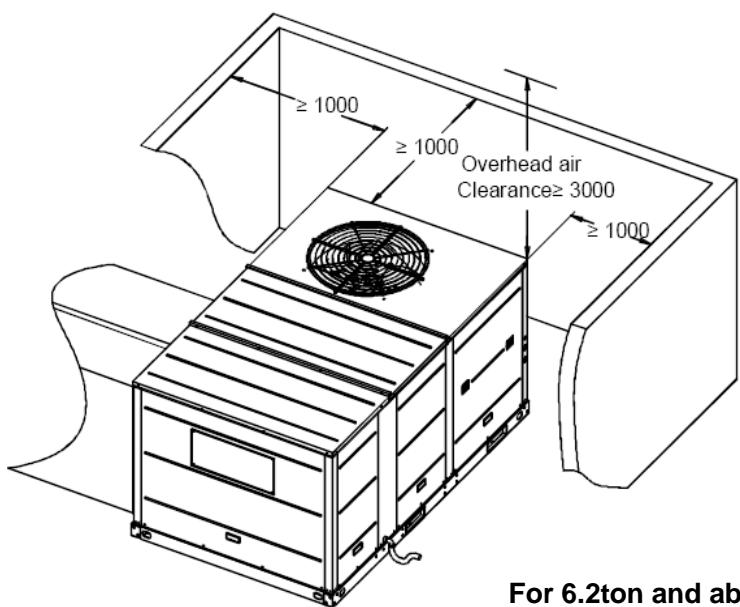

Cloth material or hard-paper should be padded in the contact place between unit and rigging cable. Rigging cable should be entwined a round at the hook for prevent danger by cable slip because of weight unbalance. During lifting, anyone forbidden lingering under the lifting unit.

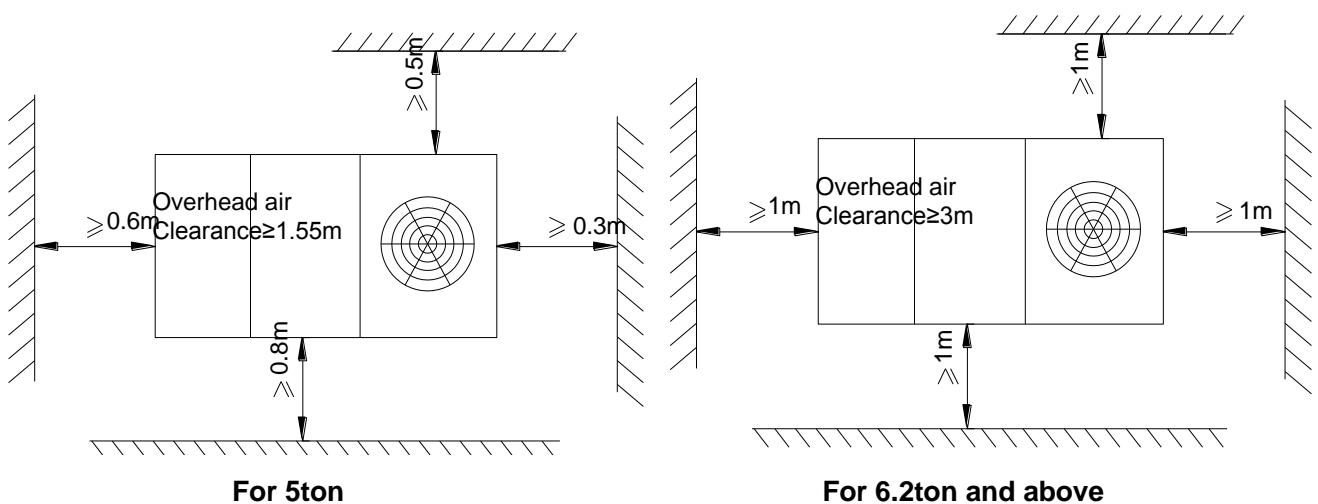

### 15.2 Service Space

1. The recommended clearances for single-unit installations are illustrated in following Fig.

These minimum requirements are not only an important consideration when determining unit placement, but they are also essential to ensure adequate serviceability, maximum capacity, and peak operating efficiency. 2. Any reduction of the unit clearances indicated in these illustrations may result in condenser coil starvation or the recirculation of warm condenser air. Actual clearances which appear to be inadequate should be reviewed with a local engineer.

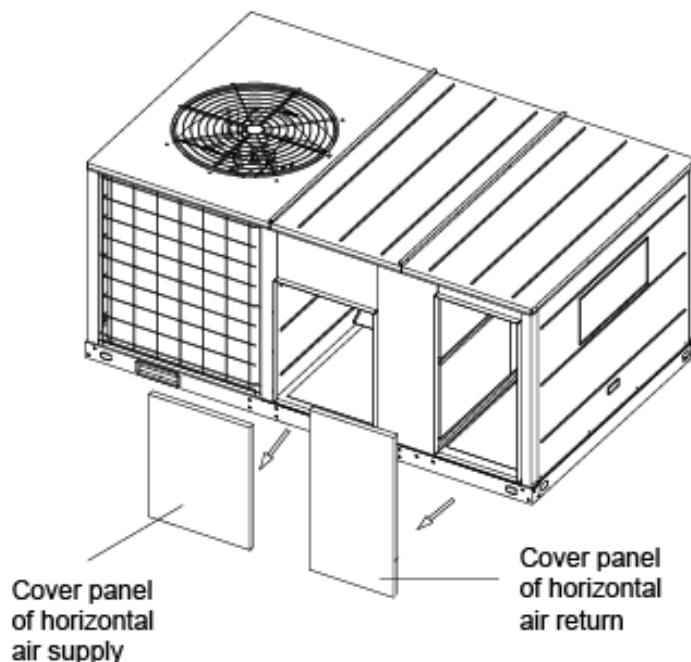

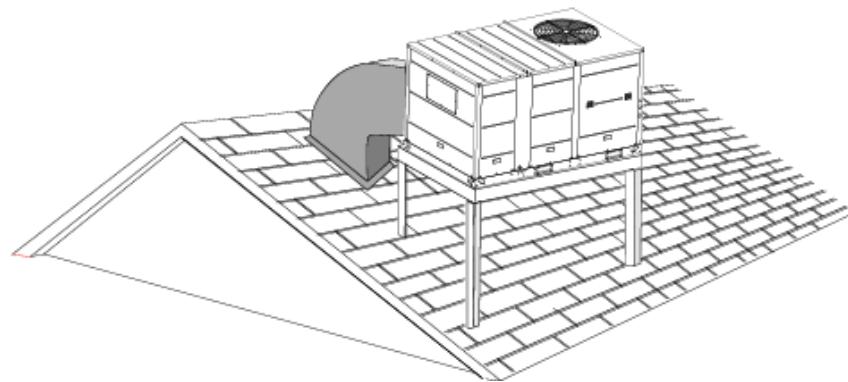

### 15.3 Rooftop -- units

For roof top applications using a field fabricated frame and ducts, according to the following procedure:

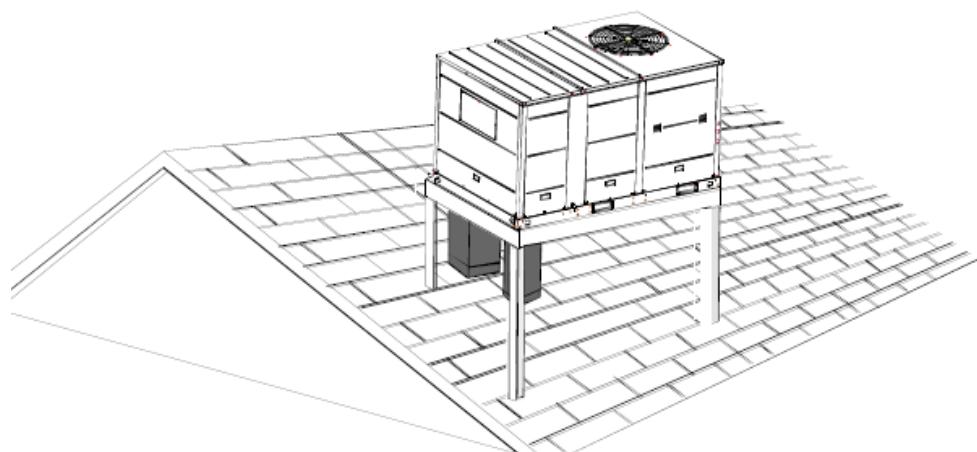

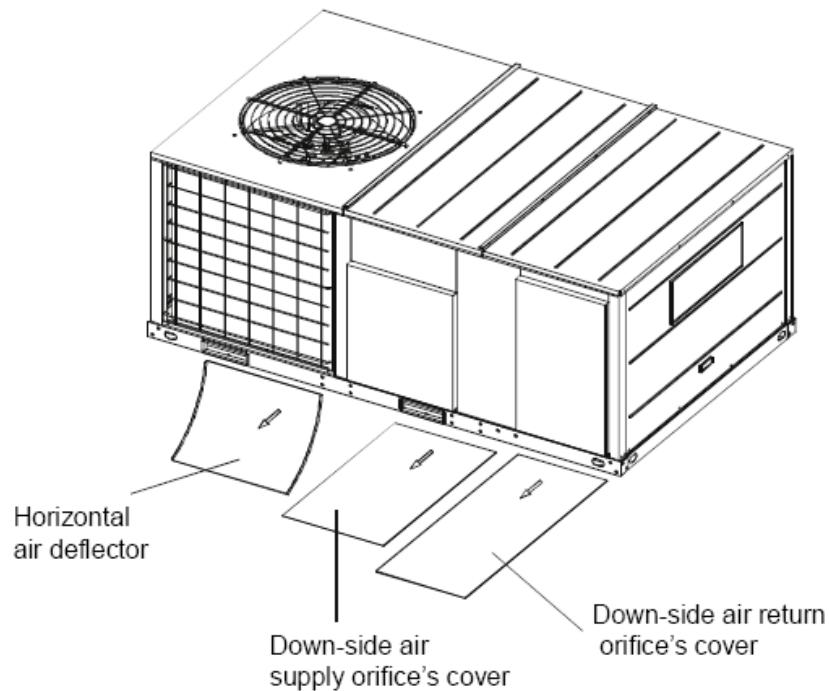

- 1) The frame must be located and secured by bolting or welding to the roof. Flashing is required.
- 2) The hole in the roof must be prepared in advance of installing the unit.
- 3) Secure the ducts to the roof.
- 4) Place the unit on the frame or roof curb.
- 5) Secure the unit to the frame or roof curb.
- 6) Insulate any ductwork outside of the structure with at least two (2) inches of insulation and then weatherproof. There must be a weatherproof seal where the duct enters the structure.
- 7) Complete the installation according to the instructions.

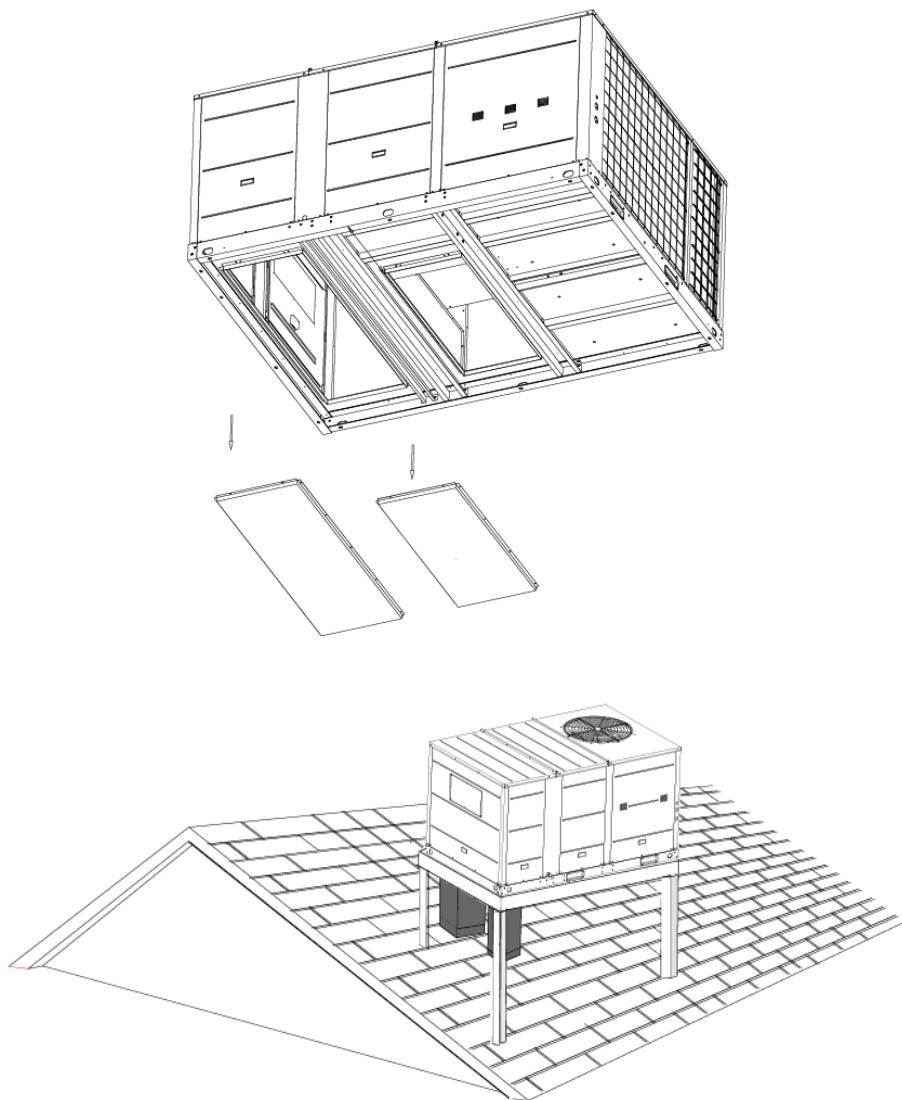

#### Typical rooftop application with frame:

Typical rooftop application with frame:

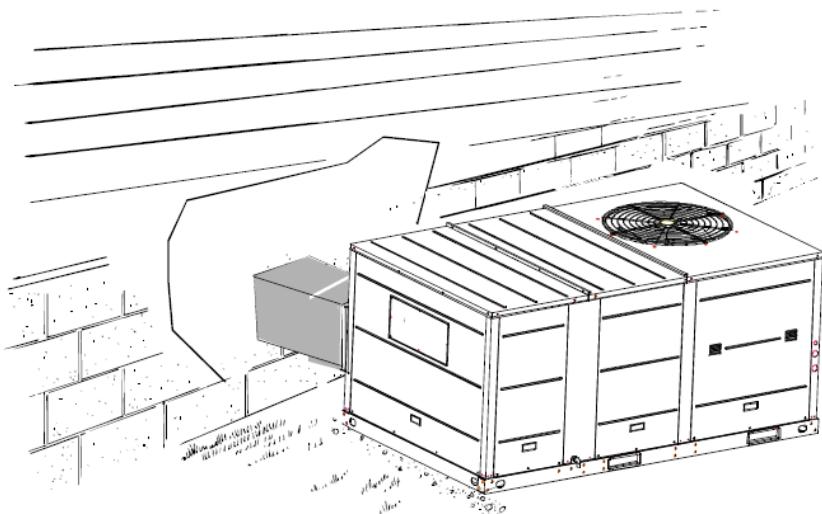

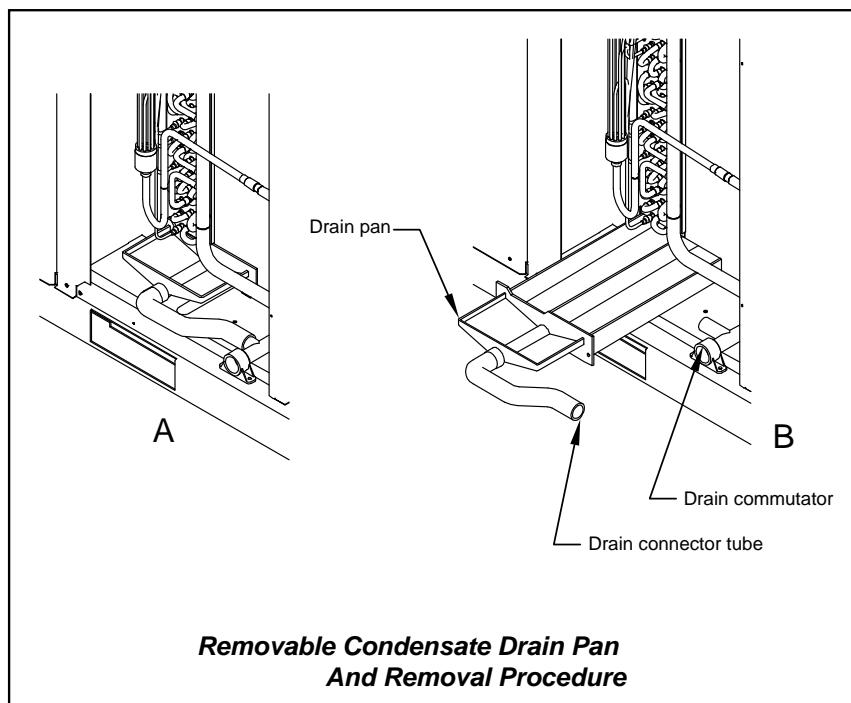

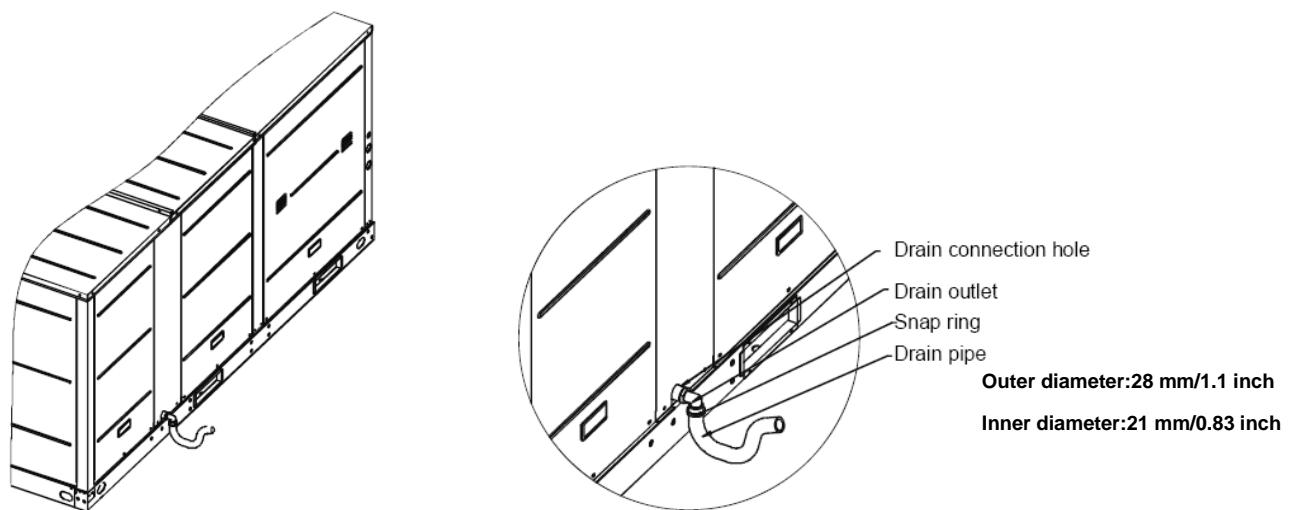

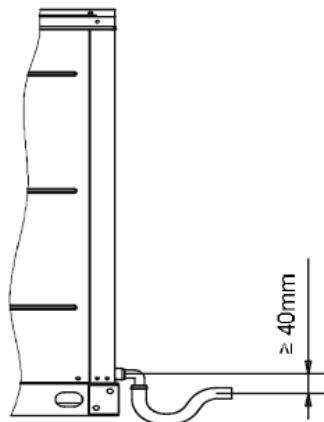

#### 15.4 Ground Level -- Horizontal Units

For ground level installations, the unit should be positioned on a pad the size of the unit or larger. The unit must be level on the pad. The pad must not come in contact with the structure. Be sure the outdoor portion of the supply and return air ducts are as short as possible.

Installation according to the following procedure:

- 1) Place the unit on the pad.
- 2) Attach the supply and return air ducts to the unit.
- 3) Insulate any ductwork outside of the structure with at least 2 inches of insulation and weatherproof. There must be a weatherproof seal where the duct enters the structure.
- 4) Complete the installation according to the instructions.

**Typical ground level application:****15.5 Installation of condensate drain piping****5ton:****6.2&7.5&8.5&10&15&17.5&20ton:**

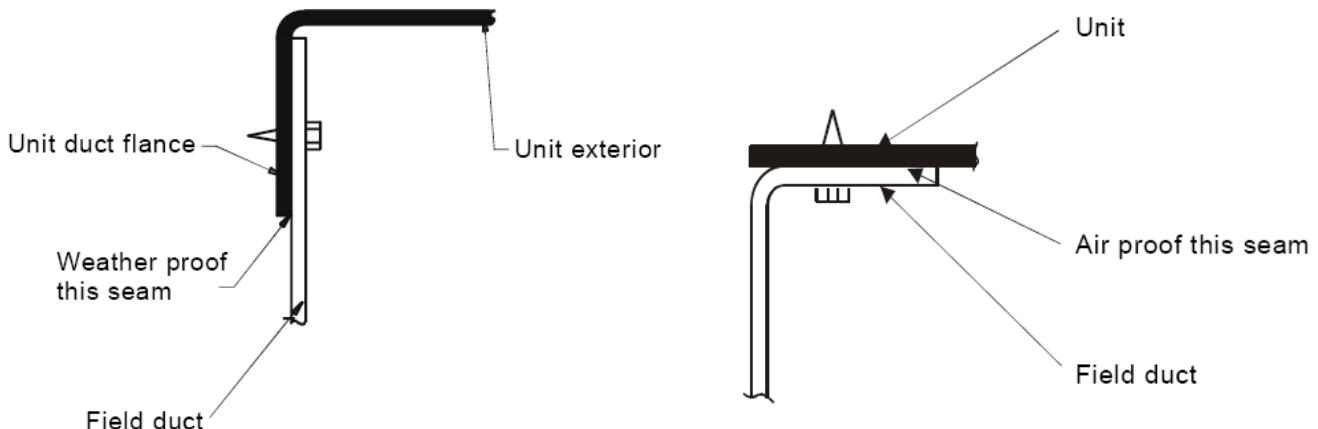

## 15.6 Ductwork

### 1. Attaching horizontal ductwork to unit

- 1) All conditioned air ductwork should be insulated to minimize heating and cooling duct losses. Use a minimum of two (2) inches of insulation with a vapor barrier. The outside ductwork must be weatherproofed between the unit and the building.
- 2) When attaching ductwork to a horizontal unit, provide a flexible watertight connection to prevent noise transmission from the unit to the ducts. The flexible connection must be indoors and made out of heavy canvas.

**Note:**

Do not draw the canvas taut between the solid ducts.

### 2. Attaching down flow ductwork to roof curb

Supply and return air flanges are provided on the roof curb for easy duct installation. All ductwork must be run and attached to the curb before the unit is set into place.

Follow these guidelines for ductwork construction:

- 1) Connections to the unit should be made with three-inch canvas connectors to minimize noise and vibration transmission.
- 2) Elbows with turning vanes or splitters are recommended to minimize air noise and resistance.
- 3) The first elbow in the ductwork leaving the unit should be no closer than two feet from the unit, to minimize noise and resistance.

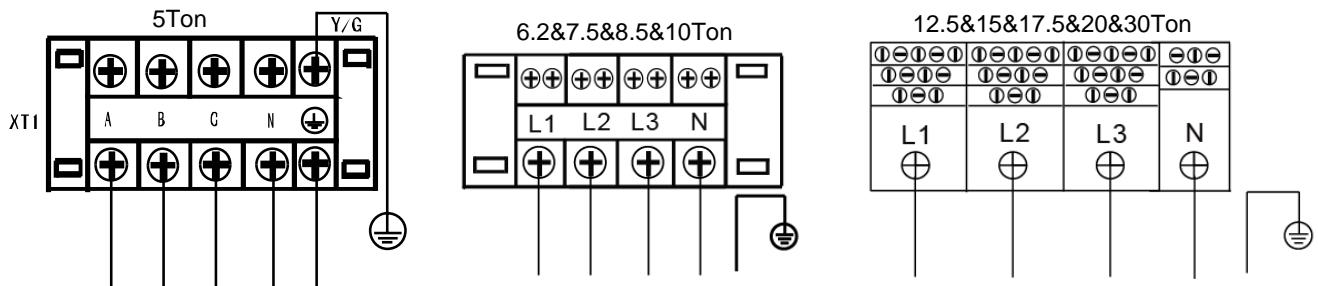

## 15.7 Wiring provision

### Field wiring

The units are internally wired at the factory according to generally accepted electrical technology.

### Required field wiring

Main power wiring to the unit control wiring between the control center and the unit, and earth wiring are required in the field.

### Required components

The following components are required: main power fuse, conduit coupling, and field supplied room thermostat.

### Wire and fuse size selection for main power source.

Wire and fuse size should be selected in accordance with national standard, taking the designed maximum current shall be the total of the compressor maximum current, condenser fan motor current and evaporator fan motor current (refer to "electrical data").

### Wire size between room thermostat and unit.

The wire size between the room thermostat and the unit should be determined according to the following table, because the 24V power source is applied to the control circuit.

	Wiring length between room thermostat and unit(one way)				
	10m	15m	20m	30m	40m
Minimum wire size( $\text{mm}^2$ )	0.5	0.5	0.75	0.75	1.0

## 16 Wired Controller

### 16.1 Standard wired controller: KJR-12B/DP (T)-E

**KJR-12B/DP (T)-E**

#### 1. SAFETY PRECAUTIONS

The following contents are stated on the product and the operation manual, including usage, precautions against personal harm and property loss, and the methods of using the product correctly and safely. After fully understanding the following contents (identifiers and icons), read the text body and observe the following rules.

##### Identifier description

Identifier	Meaning
⚠ Warning	Means improper handling may lead to personal death or severe injury.
⚠ Caution	Means improper handling may lead to personal injury or property loss.
[Note]: 1. "Harm" means injury, burn and electric shock which need long-term treatment but need no hospitalization 2. "Property loss" means loss of properties and materials.	

##### ■ Icon description

Icon	Meaning
🚫	It indicates forbidding. The forbidden subject-matter is indicated in the icon or by images or characters aside.
❗	It indicates compulsory implementation. The compulsory subject-matter is indicated in the icon or by images or characters aside.

##### Warning

⚠ Warning	Delegate installation	Please entrust the distributor or professionals to install the unit. The installers must have the relevant know-how. Improper installation performed by the user without permission may cause fire, electric shock, personal injury or water leakage.
-----------	-----------------------	---

🚫 Usage Warning	Forbid	Do not spray flammable aerosol to the wire controller directly. Otherwise, fire may occur.
	Forbid	Do not operate with wet hands or let water enter the wire controller. Otherwise, electric shock may occur.

## 2. SUMMARIZE

Usage condition:

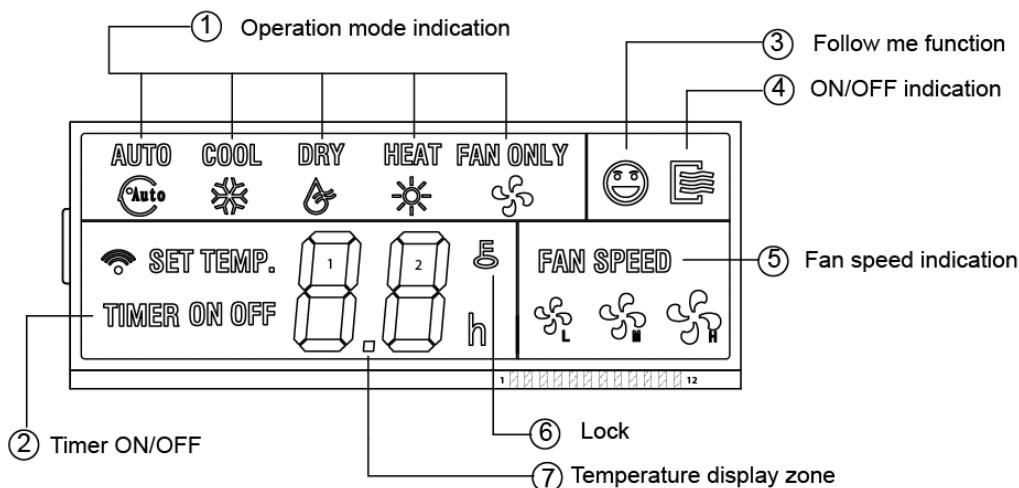

- ①. Power supply: 5V DC.
- ②. Operation temperature: -15°C~+43°C.
- ③. Operation humidity: 40%-90%, RH.

## 3. FUNCTION SUMMARY

Main function:

- ①. Connecting to indoor unit by A, B, C, D, E terminal;
- ②. Button setting action mode.
- ③. LCD display.
- ④. Timer for rest time.

## 4. NAME AND FUCNTION OF INDICATORS ON THE CONTROLLER

### ① Operation mode indication:

When press " MODE " button, the following mode can be selected in circle. Auto→Cool →Dry→Heat→Fan only→Auto. For cooling only model,heat mode is skipped.

### ② Timer :

When adjust setting on time or only on time is set, the "ON" is lighted.

When adjust setting off time or only off time is set, the "OFF" is lighted. If both 'on' and 'off' timer are set, both the "ON" and "OFF" are lighted.

### ③ Follow me function:

There is a temperature sensor inside the wire controller, after setting temperature, it will compare the two temperatures, and the space of wire controller will be the same as setting temperature. It is available under cooling, heating, auto mode.

### ④ ON/OFF indication :

When it is on, the icon display, otherwise it is extinguished.

### ⑤ Fan speed indication :

There are four fan modes : low, middle, high, auto. For some models, no middle fan then the middle fan is seen as high speed. The function is not suitable for the rooftop package units.

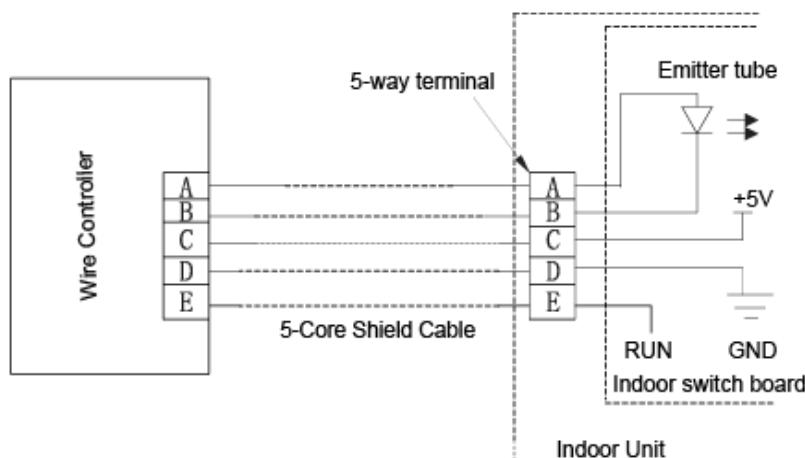

### ⑥ Lock:

When the " LOCK " button is pressed, the icon appear and other buttons is unable, press again, the icon disappear.

### ⑦ Temperature display zone:

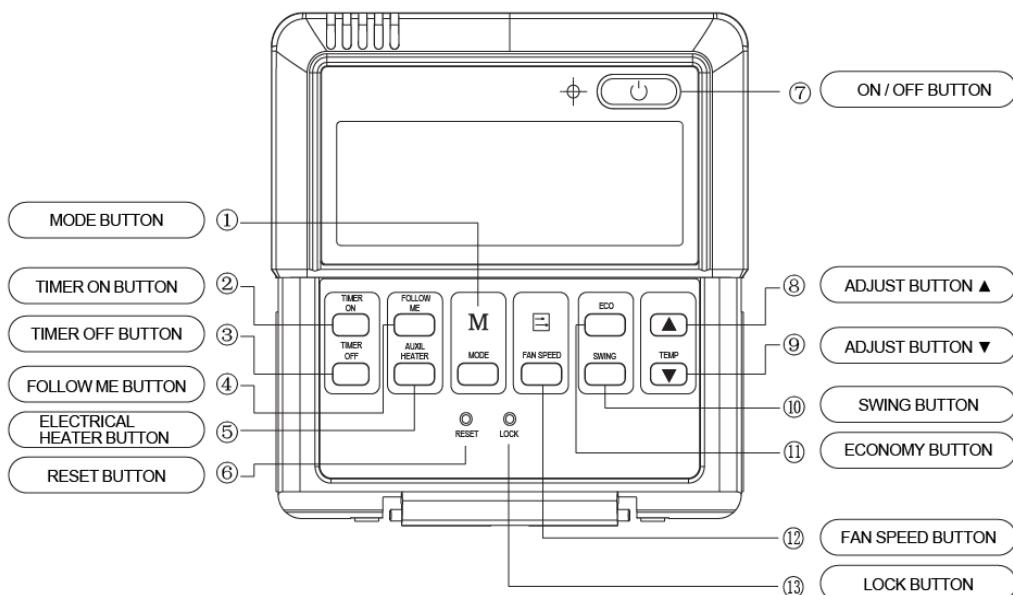

Generally it displays setting temperature, it can be adjusted by press temperature button ▲ and ▼. But in fan mode, no display here.

## 5. INSTALLATION METHOD

When a wired controller is needed, a small 5-way terminal should be added, fix an infrared emitter with gumwater near the receiver on the switch board. Connect its anode and cathode to A and B, and +5V, GND, RUN to C, D, E on the switch board.

## 6. NAME AND OPERATION OF THE BUTTON ON THE WIRE CONTROLLER

① Mode button:

When press this button, the operation mode change as the following sequence:

→AUTO → COOL → DRY → HEAT → FAN

Remark: For the cooling only model, the heating mode is skipped.

② Timer on button :

Press this button, timer on function is active. Then every press, the time increase 0.5h, after 10h, 1h increase after each press. If cancel this Function, just set it to "0.0".

③ Timer off button:

Press this button, timer off function is active. Then every press, the time increase 0.5h, after 10h, per 1h increase after each press. If cancel this function, just set it to "0.0".

④ Follow me button:

When under cool, heat and auto mode, press this button, follow me function is active. Press again, this function is ineffective.

⑤ Electrical heater button :

If press this button in heat mode, electrical heater function become ineffective.

**⑥ Reset button(hidden):**

Use a 1mm stick to press in the little hole , then the current setting is canceled . The wired controller will enter into original state.

**⑦ON/OFF button:**

When in off state, press this button, the indicator is on, the wire controller enter into on state, and send setting information to in door PCB. When in on state, press this button, the indicator is off, and send instruction. If timer on or timer off has been set, it cancel this setting then send instruction to stop the machine.

**⑧ Adjust button ▲:**

Set indoor temperature up. If press and hold on, it will increase at 1 degree per 0.5 second.

**⑨ Adjust button ▼ :**

Set indoor temperature down. If press and hold on, it will decrease at 1degree per 0.5 second.

**⑩ Swing button:**

First pressing: start swing function; second pressing: stop swing. (Match to some model with swing function).

**⑪ Economy operation button:**

Press this button, the indoor unit operates in economy mode, press it again, exit this mode (it may be ineffective for some models)

**⑫ Fan speed button:**

Press this button consecutively, the fan speed will circle as follow:

**⑬ Lock button (hidden):**

When you push the LOCK button, all current settings are locked in and the wire controller does not accept any operation except that of the LOCK button. Use the lock mode when you want to prevent setting from being changed accidentally or play fully. Push the LOCK button again when you want to cancel the LOCK mode.

## 7. USING METHOD

### AUTOMATIC OPERATION

Connect to power, indoor operation lamp flash.

- ①. Press "MODE" button, select " AUTO " ;
- ②. Press the button "▲" and "▼", set temperature you want, generally it is among 17°C~30°C;
- ③. Press " ON/OFF" button, operation lamp is on, the air-conditioner work in auto mode, indoor fan is auto, and can not be changed. Auto is displayed on LCD. Press " ON/OFF" button again to stop.
- ④. Economy operation is valid in auto mode.

### COOL/HEAT/FAN MODE OPERATION

- ①. Press "MODE" button, select "COOL", "HEAT" or "FAN ONLY" mode.
- ②. Press temperature adjust button to select setting temp..
- ③. Press "FAN SPEED" button to select high/mid/low/auto.
- ④. Press "ON/OFF" button, indoor unit operation lamp on, it works in selected mode. Press "ON/OFF" button again, it stops to work.

Remark: When in fan mode, no temperature can be set.

### DRY OPERATION

- ①. Press " MODE " button, select " DRY " mode.
- ②. Press temperature adjust button to select setting temp.
- ③. Press " ON/OFF " button, indoor unit operation lamp on, it works in dry mode. Press ON/OFF button again, it stops to work.
- ④. In dry mode, economy operation and fan speed are ineffective.

## TIMER SETTING

Timer on only:

- ①. Press " TIME ON " button, it display "SET" on LCD, and display " H " and "ON" , it is waiting for timer on setting.
- ②. Press " timer " on button repeatedly to adjust time setting.
- ③. If press this button and hold on, the time will increase at 0.5h, after 10h, it increases at 1h.
- ④. After setting 0.5 second, the wire controller send timer on information, it is finished.

Timer off only:

- ①. Press "TIME OFF " button, it display "SET" on LCD, and display " H " and ON, it is waiting for timer on setting.
- ②. Press "TIME OFF" button repeatedly to adjust time setting.
- ③. If press this button and hold on, the time will increase at 0.5h, after 10h, it increases at 1h.
- ④. After setting 0.5 second, the wire controller send timer off information, it is finished.

## TIMER ON AND TIMER OFF BOTH

- ①. Set timer on time as the corresponding step1 and 2.
- ②. Set timer off time as the corresponding step1 and 2.
- ③. Timer off time must be longer than timer on time.
- ④. 0.5 second after setting, the wire controller send information, the setting is finished.

## CHANGE TIMER

If there is a timer of changing time to be need, press corresponding button to revise it. If cancel timer, change time to 0.0.

**NOTE:** The timer time is relative time, that is delay after setting time ( i, e: setting time is 8:05 A,M). So when timer is set, the standard time can not be adjusted.

## 8. TECHNICAL INDICATION AND REQUIREMENT

EMC and EMI comply with the CE certification requirements.

## 16.2 Optional wired controller:

**KJR-23B:** For cooling only and cooling with auxiliary heater

**KJR-25B:** For Cooling and heating

**KJR-23B**

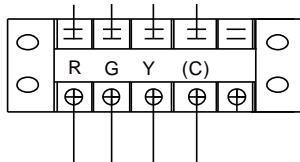

**KJR-25B**

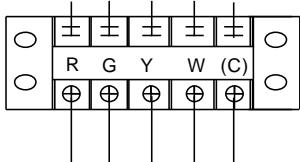

## 16.3 Field wiring

To connect wired controller

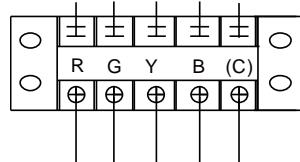

For Cooling Units

For Cooling+EAH Units

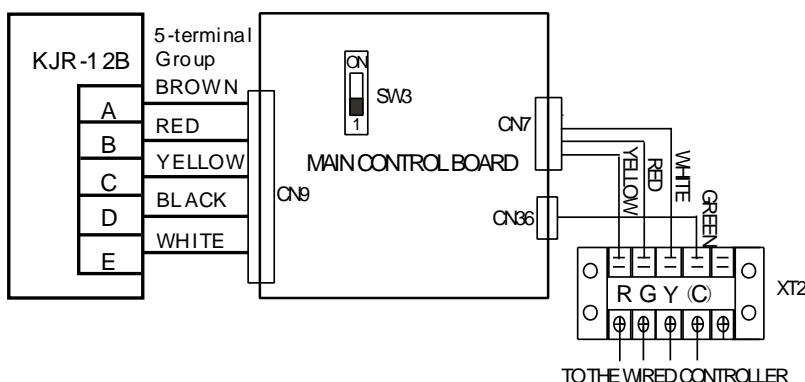

For Heating&cooling Units

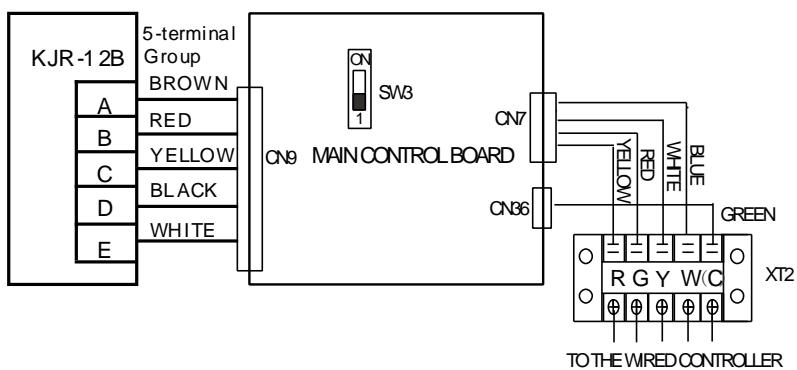

### Dial code setting

The wired controller KJR-12B can be used when the SW3 is on “on”, if the SW3 is on ‘1’, the wired controller KJR-23B or KJR-25B can be used. After setting, please shut off the power supply and then power on it again, otherwise, the new settings function will be invalid.

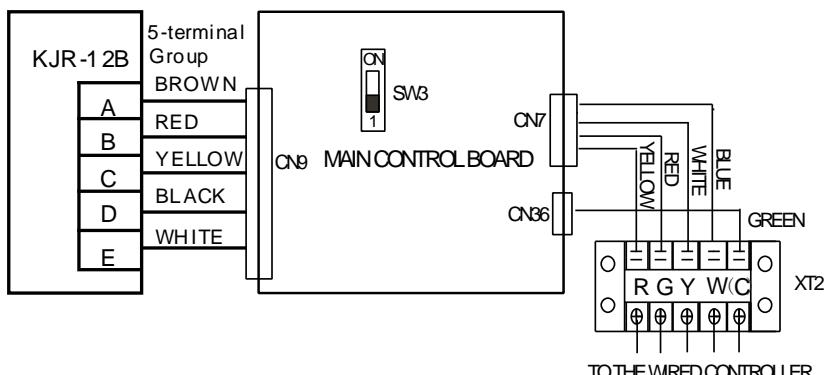

For Cooling Units

## For Cooling+EAH Units

## For Cooling+EAH Units

Remark:

Two stage capacity output controlling is optional.

## 17. Error Code

### 17.1 Error Code for 5ton

Type	Content	Code	Remarks
Normal	Standby	--	
Normal	Constraint cooling	On	
Normal	Run	10.	
Error	Compressor phase sequence error or phase default	E0	Manual reset
Error	Outdoor coil temp. sensor T3-1 default	E1	Manual reset

## 17.2 Troubleshooting

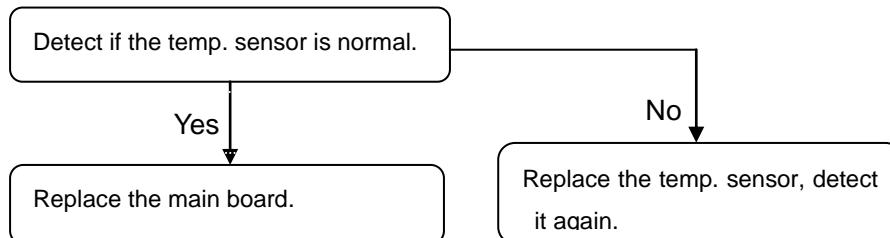

### For 5ton

Item	Content	Error code
1	Compressor phase sequence error or phase default	E0
2	Outdoor coil temp. sensor T3-1 default	E1
3	Outdoor coil temp. sensor T3-2 default	E2
4	Indoor coil temp. sensor T2-1 default	E5
5	Indoor coil temp. sensor T2-2 default	E6
6	Indoor temp. sensor T1 error	E9
7	Outdoor ambient temp. sensor T4 error	EA
8	Wired controller output error	Eb
9	Over current protection	P0
10	Comprehensive protection for outdoor fan	P3
11	Protection for Hi./Lo. Pressure or exhaust temp.	P4

#### ① E0: Compressor phase sequence error or phase default

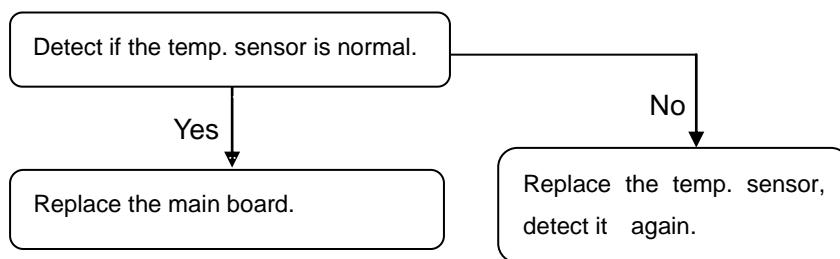

#### ② E1: Outdoor coil temp. sensor T3 default.

**③ E9: Indoor coil temp. sensor T2 default.**

(Indoor temp. and Pipe Temp. Sensor Resistance Value Table, see **Appendix 2** )

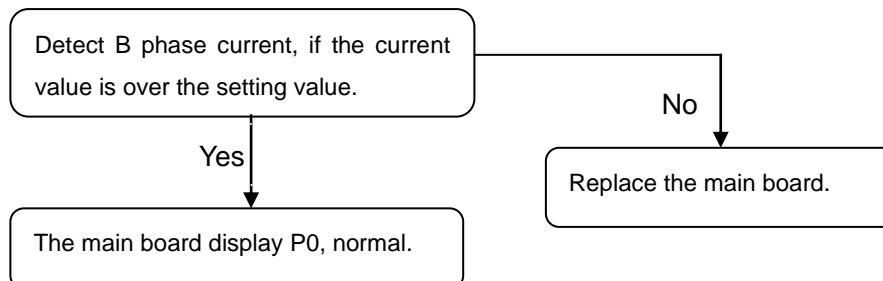

**④ When E2,E5,E6 or EA displays, please check the wired nameplate, if the terminals of T2\_1、T2\_2、T3\_2、T4 are connected as short circuit. If no, please connect all as short circuit, unless replace main board.**

**⑤ Eb: Wired controller output error.(Only for KJR-23B or KJR-25B).**

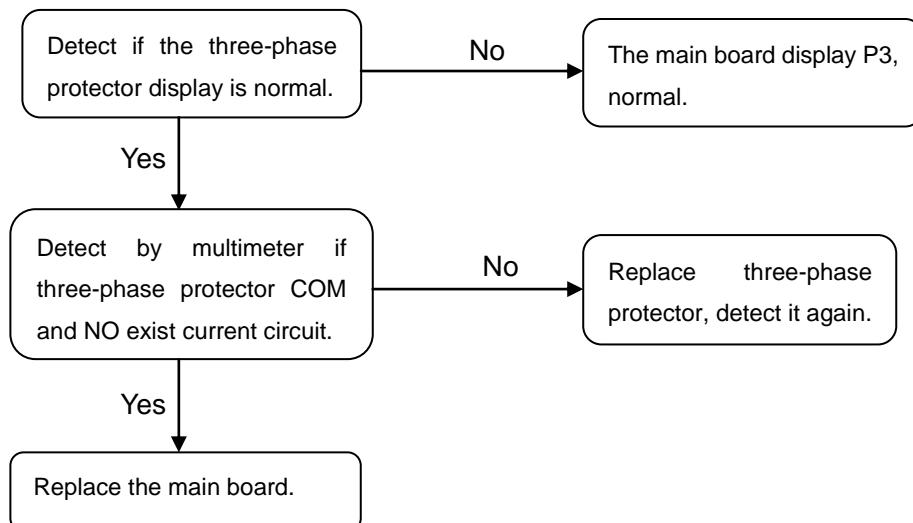

Avoid three conditions as following:

- 1) The wired controller output signal has Y, no G.
- 2) The wired controller output signal has W, no G.
- 3) The wired controller output signal has Y and W, no G.

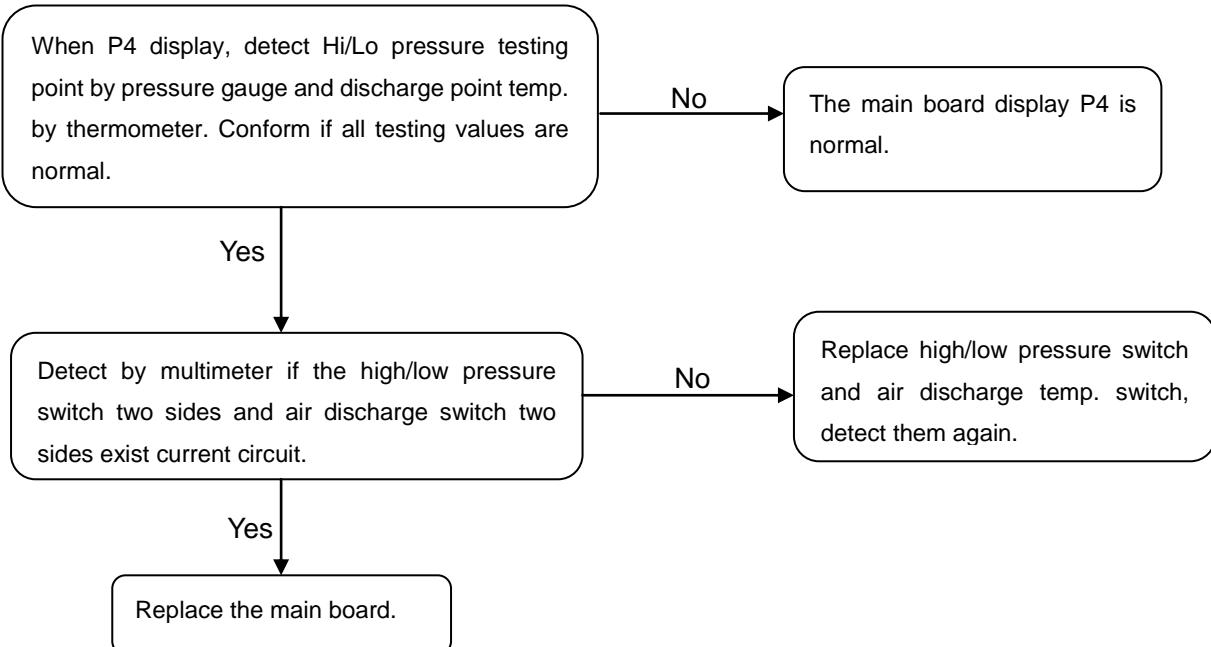

**⑥ P0: Compressor over current protection.(The over current protection value is 16A)**

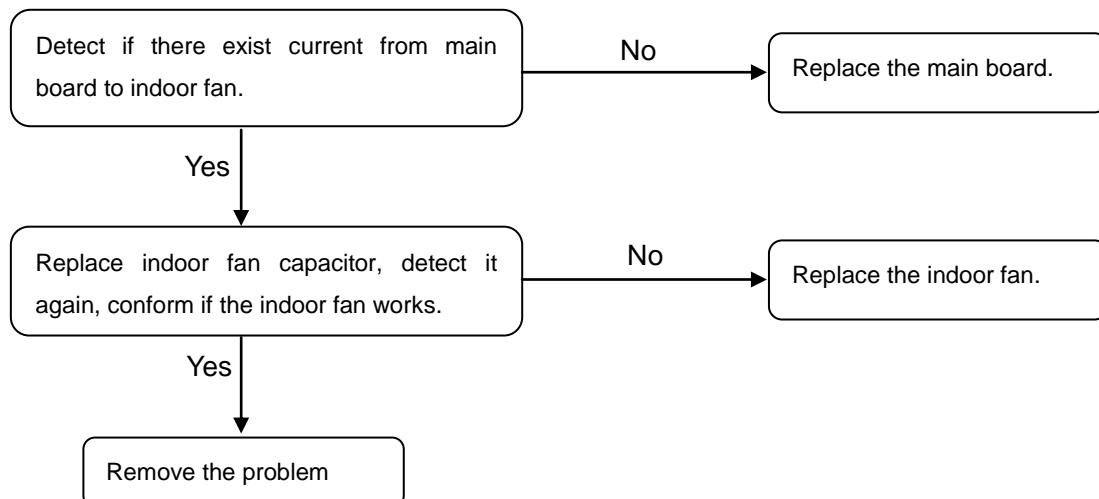

**⑦ P3: Comprehensive protection for outdoor fan**

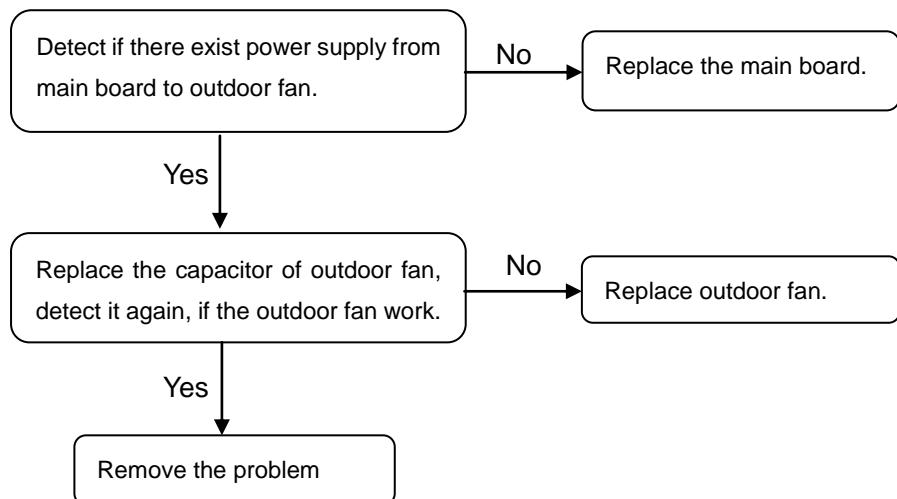

**⑧ P4: Protection for Hi./Lo. Pressure or exhaust temp. (High pressure protection value: 4.4MPa, High pressure protection value: 0.14MPa; air discharge temp. protection value: 130°C above)**

**⑨ Indoor fan motor don't work.**

**⑩ Outdoor fan motor don't work.**

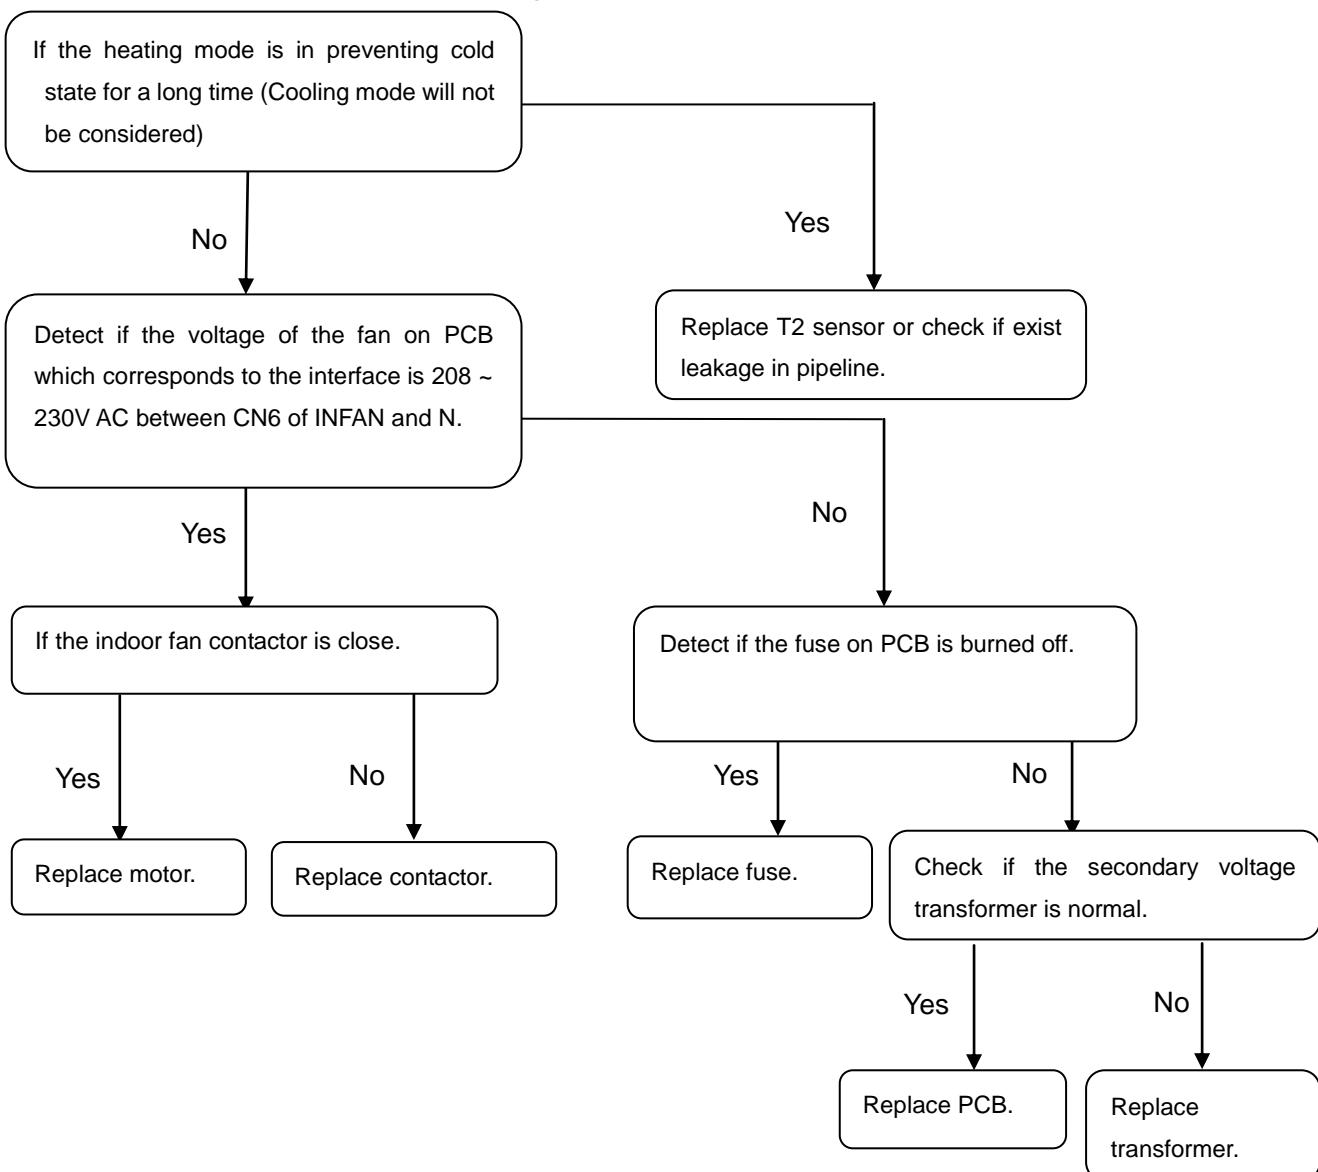

**For 6.2ton and above**

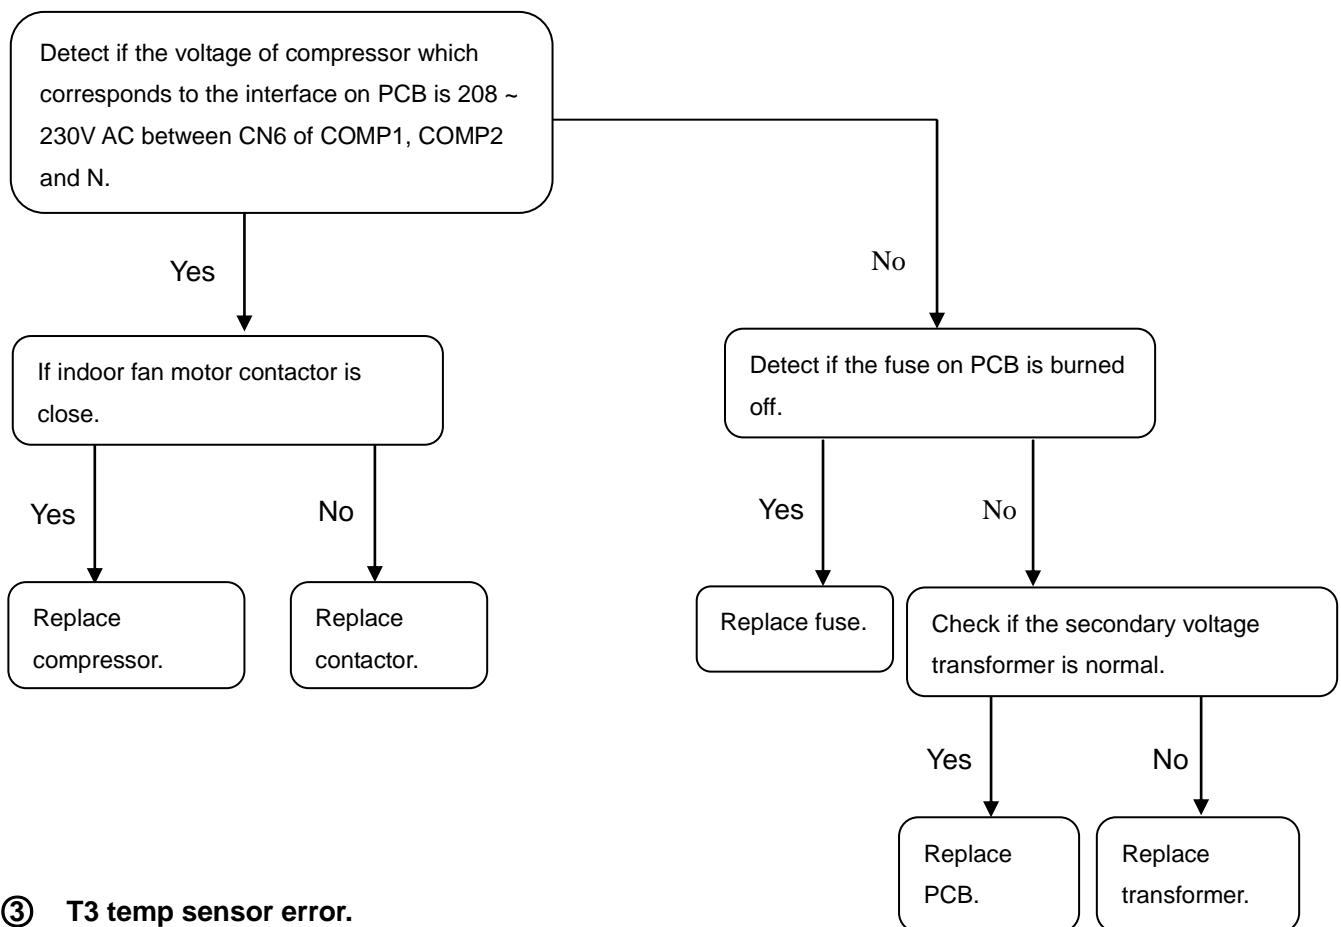

Item	Content	Error code
1	Indoor fan motor didn't run.	--
2	Compressor didn't run.	--
3	T3 temp sensor error.	EA
4	Check if the low pressure protection is normal.	--
5	Outdoor fan motor didn't run.	--
6	Four ways valve didn't work.	--
7	Condenser high temp protection.	P8,P9

**① Indoor fan motor don't run.**

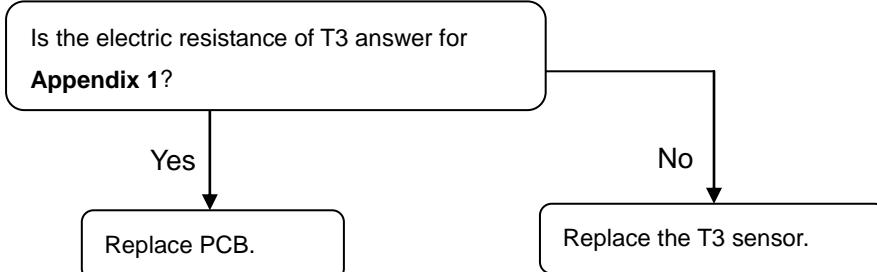

The first check if the power supplier is normal, if all wire connection terminal is loose, if the wired controller set and wire connection are correct, operating as flow process after confirm.

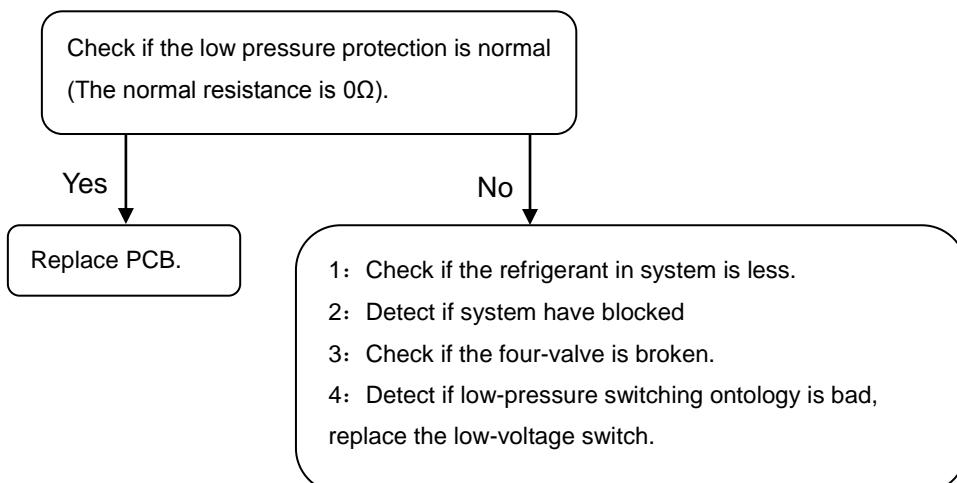

**② Compressor don't run (All wires connection are correct and reliable, if power supplier is required range. If compressor don't run, you can analysis as flowing)**

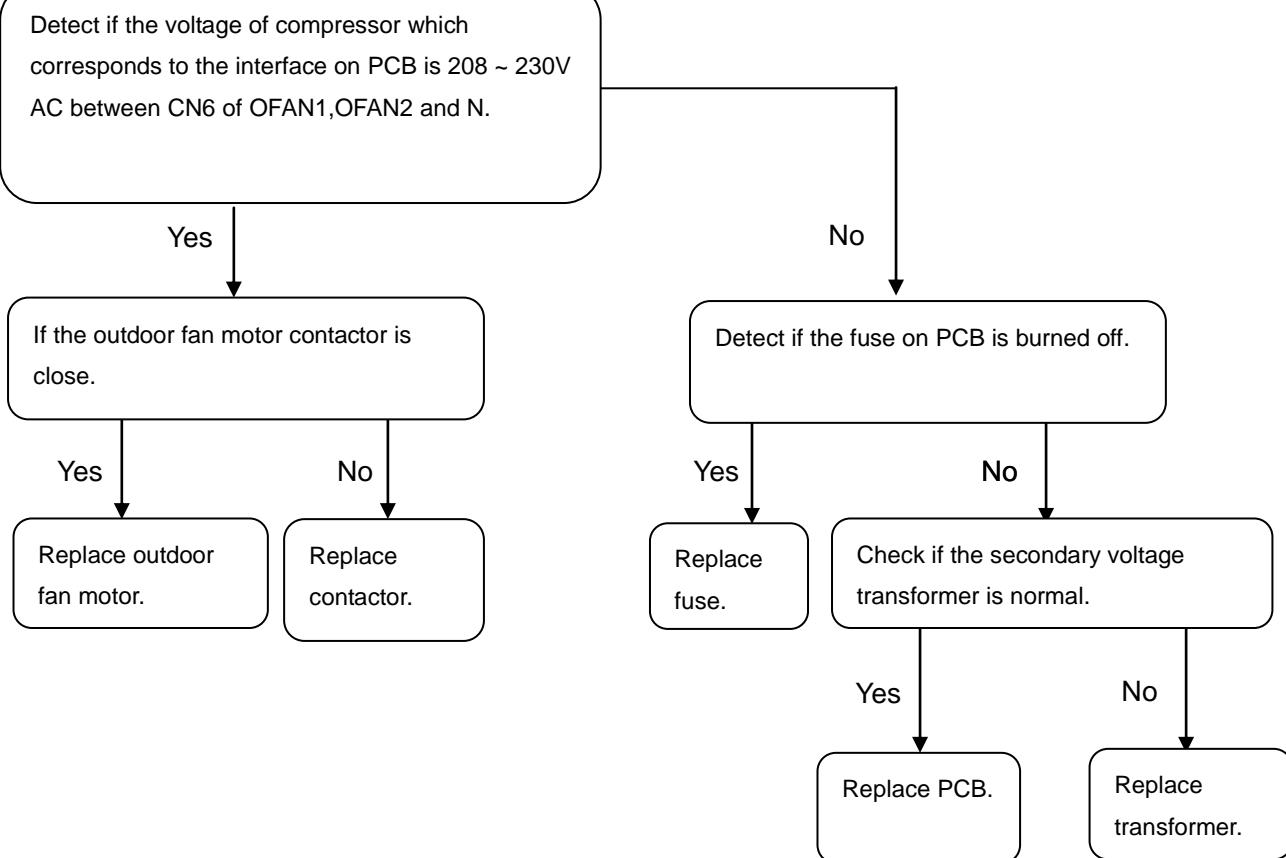

**③ T3 temp sensor error.**

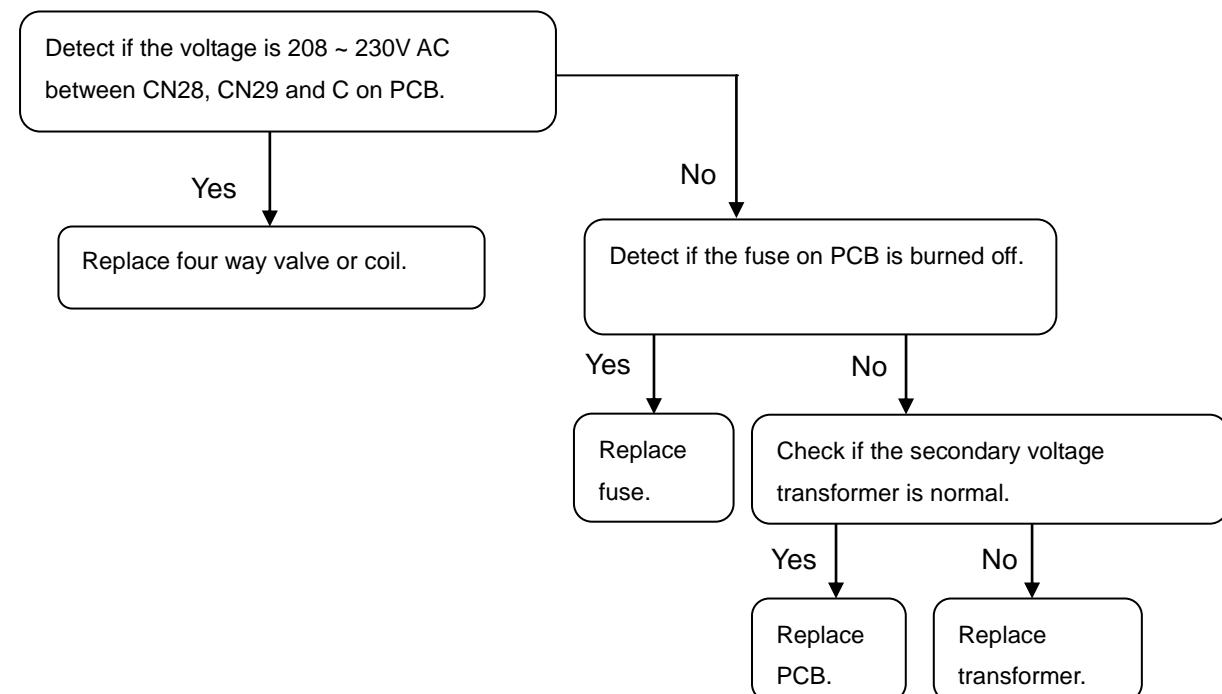

**④ Check if the low pressure protection is normal.**

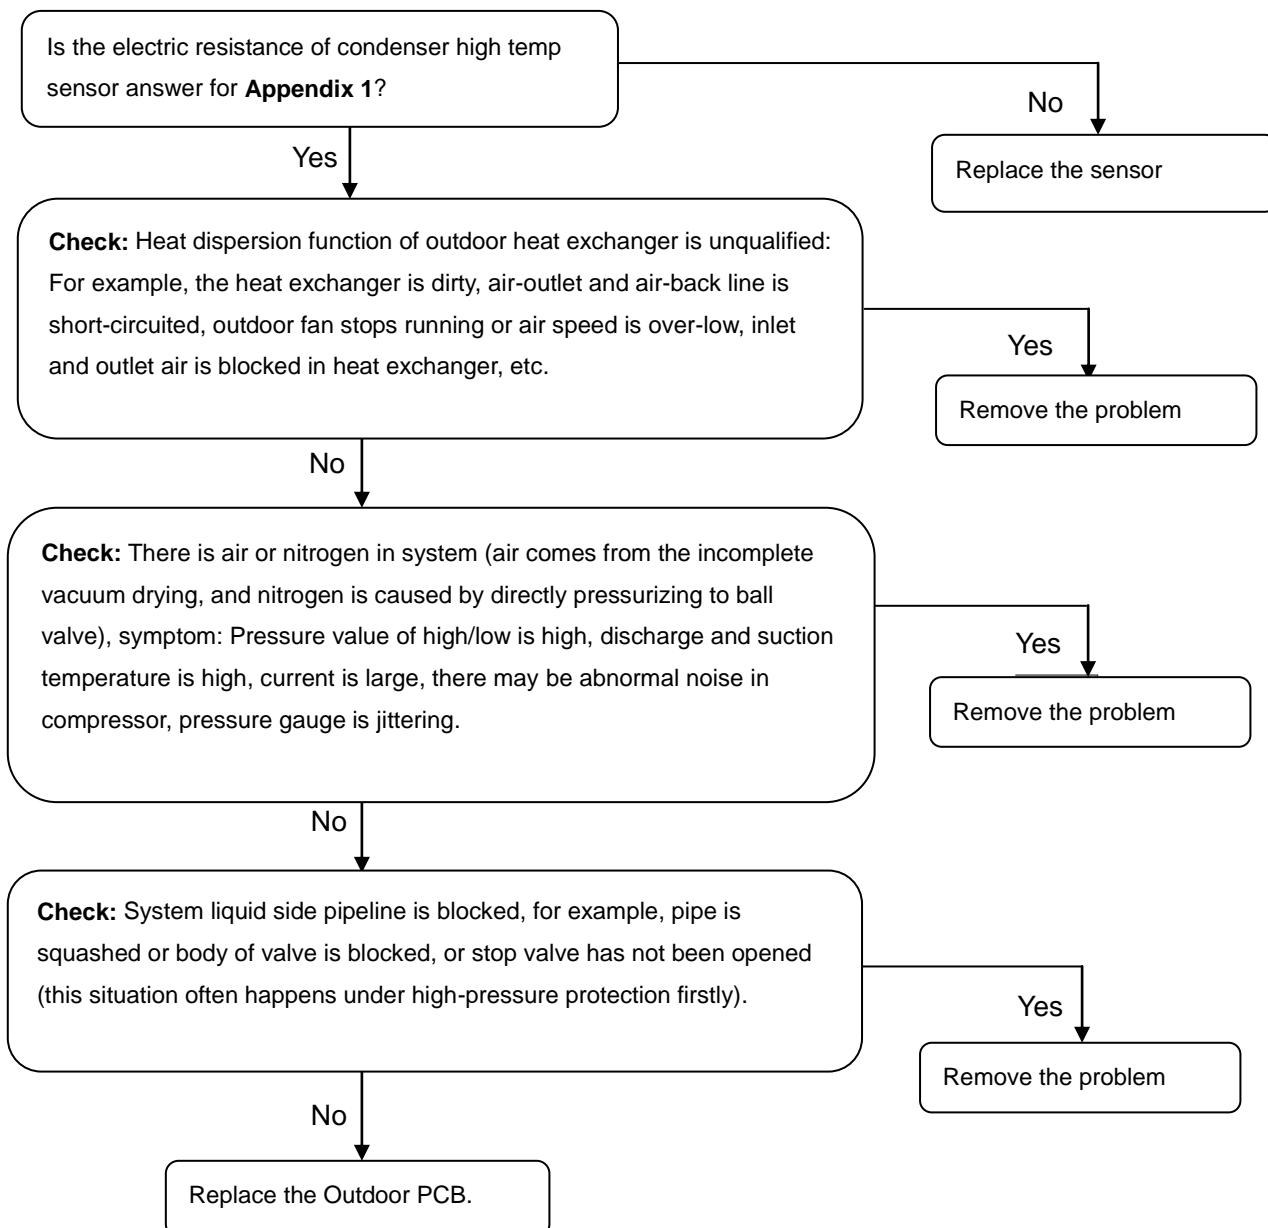

## ⑤ Outdoor fan motor don't run.

## ⑥ Four ways valve don't work.

## ⑦ Condenser high temperature protection

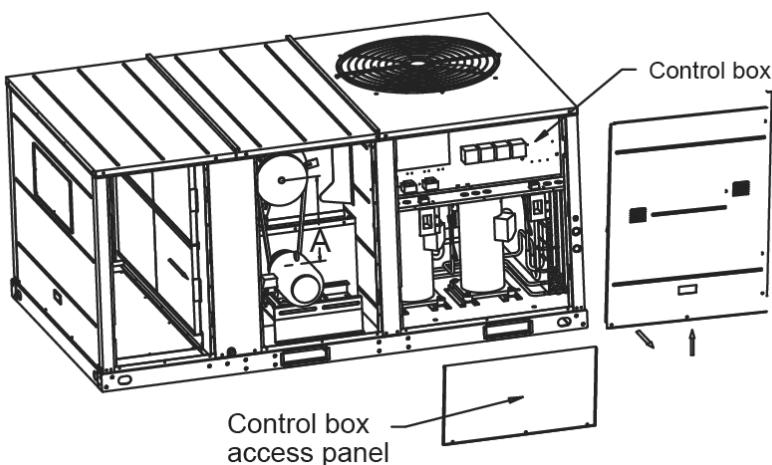

## 18. Accessories

Name of accessories	Qty	Shape
Manual	1	—
Drain outlet	1	
Snap ring	1	
Drain pipe	1	
KJR-12B Wired controller	1	

## 19. Maintenance and Upkeep

### Regular maintenance and upkeep

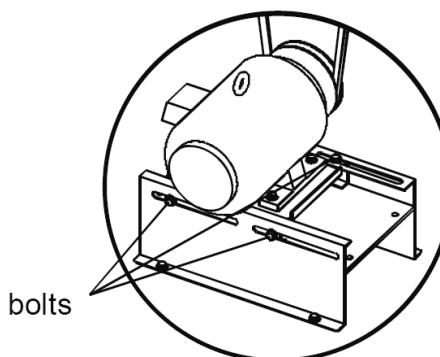

Some regular maintenance and upkeep have been carry on by user, includes: change the one-time dust filter, clean casing, wash condenser and replace a new belt, as well as do some test for the equipment.

Model	A
6.2 Ton	328mm
7.5 Ton	328mm
8.5Ton	395mm
10 Ton	395mm
12.5Ton	620mm
15 Ton	576mm
17.5 Ton	576mm
20 Ton	525mm
30Ton	925mm

**Note:** At least 1m flame resistant layer must be laid at the end of the air duct internal surface.

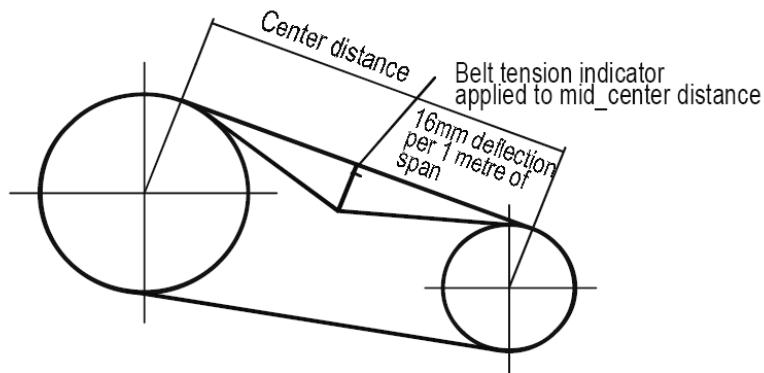

Regulating belt of rate of tension, inner fan Refer to the following Fig. fixed bolt of electric motor's supporting slide was loosened, following electric motor was droved, belt of rate of tension will begin change.

Method of belt tensioning using belt tension indicator

Calculate the deflection in mm on a basis of 16mm per meter of center distance

Center distance (m)  $\times 16 =$ deflection (mm).

Belt section	For required to deflection belt 16 mm per meter of span		
	Small pulley diameter (mm)	Newton (N)	Kilogram-force (kgf)
SPA	80 to 132	25 to 35	2.5 to 3.6
SPB	140 to 224	45 to 65	4.6 to 6.6

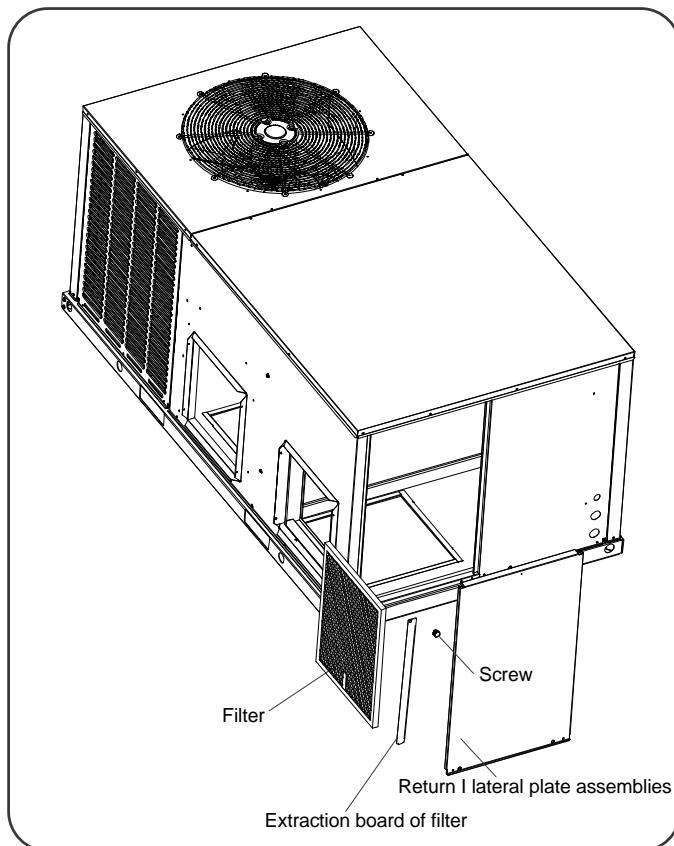

**NOTE:** The belt which is too tight or too loose may generate noise and be harmful to the unit.

#### Dismantle the air filter.

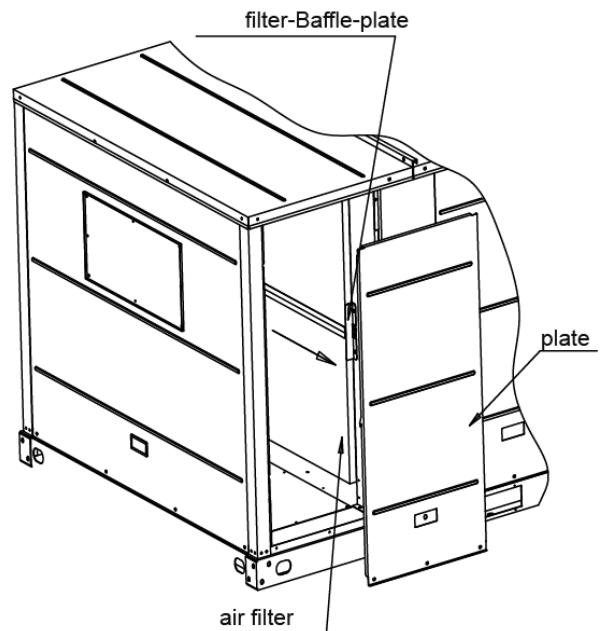

Twist of screws and up the plate that is gets out.

Upon loose the filter-baffle-plate, the filter could be pulled out along the supporting slot.

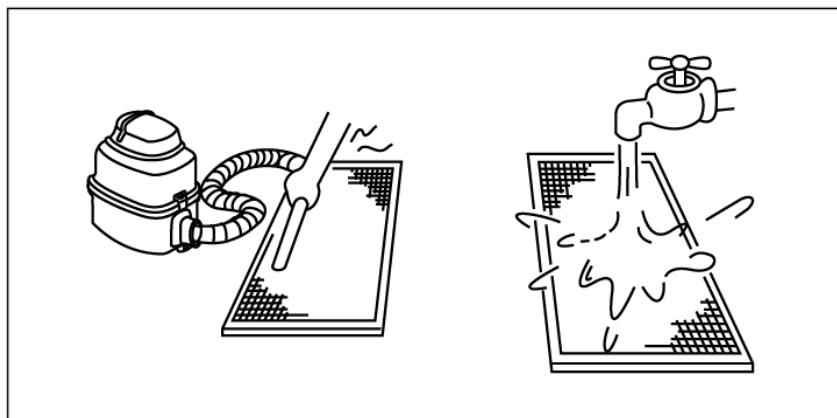

**5ton**

**7.5~30ton**

Clean the air filter (Vacuum cleaner or pure water may be used to clean the air filter. If the dust accumulation is too heavy, please use soft brush and mild detergent to clean it and dry out in cool place).

The air-in side should face up when using vacuum cleaner.

The air-in side should face down when using water.

**CAUTION:** Do not dry out the air filter under direct sunshine or with fire.

### Re-install the air filter

#### Condenser coil

Unfiltered air circulates through the unit's condenser coil and can cause the coil's surface to become clogged with dust, dirt, etc. To clean the coil, vertically (i.e., with the fins) stroke the coil surface with a soft-bristled brush. Be sure to keep all vegetation away from the condenser coil area.

Maintenance performed by serviceman.

To keep your unit operating safely and efficiently, the manufacturer recommends that a qualified serviceman check the entire system at least once each year and any other time that you feel one is needed. Your serviceman should examine these areas of your unit:

#### Filters

Motors and drive system components

Economizer gaskets (for possible replacement)

Safety controls (for mechanical cleaning)

Electrical components and wiring (for possible replacement and connection tightness)

Condensate drain (for cleaning)

Unit duct connections (to see that they are physically sound and sealed to the unit casing)

Unit mounting support (for structural integrity)

The unit (for obvious unit deterioration)

#### **CAUTION:**

Do not operate the unit without the evaporator fan access panel in place. Reinstall the access panel after performing any maintenance. Operating the unit without the access panel may result in severe personal injury or death.

## Appendix :
